Installation
Operation &
Maintenance

E34-DV
Direct-Vented
Gas Fireplace

Warning:
Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to this manual. For assistance or additional information consult a qualified installer, service agency or the gas supplier.

For Your Safety:
Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

What To Do If You Smell Gas:
• Do not try to light any appliance.
• Do not touch any electrical switch; do not use any phone in your building.
• Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
• If you cannot reach your gas supplier, call the fire department.

Check local codes and read all instructions prior to installation.
Leave this manual with the owner.

Introduction

The **E34-DV** is a direct-vented gas fireplace equipped with a Single Burner. It is available in four models:
- Top Vent (Model E34-DVTV)
- Rear Vent (Model E34-DVRV)
- Intermittent Pilot, Top Vent (Model E34-DVTV-I)
- Intermittent Pilot, Rear Vent (Model E34-DVTV-RV-I)

This manual covers all models but some sections are specific to particular models. These sections are marked with a symbol, plus the appropriate model number.

The **E34-DV** is rated at:
- 16,000 BTU/H (4.8 Kilowatts) for Natural Gas
- 16,000 BTU/H (4.8 Kilowatts) for Propane gas

The Montigo warranty will be voided by, and Montigo disclaims any responsibility for, the following actions:
- Modification of the fireplace and/or components including Direct-Vent assembly or glass doors.
- Use of any component part not manufactured or approved by Montigo in combination with this Montigo fireplace system.
- Installation other than as instructed in this manual.

Consult your local Gas Inspection Branch on installation requirements for factory-built gas fireplaces. Installation & repairs should be done by a qualified contractor.

**Installations in Canada** must conform to the current CAN/CGA B-149.1 and .2 Gas Installation Code and local regulations. When the unit employs the optional Fan Kit, it must be electrically grounded in accordance with **CSA C22.1** Canadian Electrical Code Part 1 and/or Local Codes.

**Installations in the USA** must conform to the National Fuel Gas Code, **ANSI Z223.1-1988**. When the unit employs the Optional Fan Kit it must be grounded in accordance with local codes or, in the absence of local codes, with the National Electrical Code, **ANSI/NFPA 70-1987**.

**CAUTIONS**

Due to its high operating temperatures, the appliance should be located out of traffic & away from furniture and draperies.
- Children and adults should be alerted to the hazards of the high surface temperature, which could cause burns or clothing ignition.
- Young children should be carefully supervised when they are in the same room as the appliance.
- Clothing or other flammable materials should not be placed on or near the appliance.
**Installing The Fireplace Shell**

The fireplace may be installed in any location that is free of air conditioning ducts, electrical wiring and plumbing. Safety, as well as efficiency of operation, must be considered when selecting the fireplace location. Try to select a location that does not interfere with room traffic, has adequate ventilation, and offers an accessible pathway for Direct Vent & Combustion Air Kit installation.

The fireplace dimensions are shown below:

![Fireplace Dimensions Diagram](image)

*Figure 1. Fireplace dimensions.*

**Clearances**

The E34DV clearances to combustible materials are:

<table>
<thead>
<tr>
<th>Part</th>
<th>Clearance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Top - E34-DVRV*</td>
<td>7&quot;</td>
</tr>
<tr>
<td>Top - E34-DVT*</td>
<td>19&quot;</td>
</tr>
<tr>
<td>Back</td>
<td>0&quot;</td>
</tr>
<tr>
<td>Sides</td>
<td>1/2&quot;</td>
</tr>
<tr>
<td>Floor</td>
<td>0&quot;</td>
</tr>
<tr>
<td>Mantle**</td>
<td>6&quot;</td>
</tr>
</tbody>
</table>

* Clearance from the top of the fireplace to a combustible ceiling within the fireplace enclosure.

** Refer to page 10.

**Framing**

![Framing Diagram](image)

* When sheetrock is not used behind the fireplace, framing depth may be reduced to 13 7/8".

*Figure 2. Framing dimensions.*

**Figure 3. Corner framing dimensions.**

When installing a shelf over the top of the fireplace, the following guidelines must be adhered to: For Rear Vent models (E34-DVRV), the minimum clearance from the top of the fireplace to a shelf is 7". For Top Vent models (E34-DVT), the minimum clearance is 19". (Minimum 1" clearance must still be maintained around the vent pipes.)

See Figure 4.

*Figure 4. Framing for shelves over the fireplace.*

Unprotected combustible walls which are perpendicular to the fireplace opening, must not project beyond the shaded area shown in Figure 18b.

For protection against freezing temperatures, it is recommended that outer walls of the chase be insulated with a vapour barrier. This will reduce the possibility of a cold-air convection current on the fireplace.

**WARNING:**

When this appliance is installed directly on carpeting, tile or any combustible material other than wood flooring, it must be installed on a metal or wood panel extending the full width and depth of the appliance.
Installing The Gas Line

The gas line must be installed before finishing the E34-DV fireplace. **Natural Gas** requires a minimum inlet gas supply pressure of 5.5" W.C. & a manifold pressure of 3.5" W.C. **Propane Gas** requires a minimum inlet gas supply pressure of 11" W.C. & a manifold pressure of 10" W.C. Provision must also be made for a 1/8" N.P.T. plugged tapping and be accessible for test gauge connection immediately upstream of the gas supply controls to the appliance. The fireplace gas connection and the main operating gas valve is located behind the removable brass trim at the bottom of the unit and need only be attached to the gas line with an approved fitting, as required by the applicable installation codes.

![Figure 5. Gas line access.](image)

The appliance and its individual shutoff valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressures in excess of 1/2 psig (3.5 kPa).

The appliance must be isolated from the gas supply piping system by closing its individual manual shutoff valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig (3.5 kPa).

* After gas line is connected, it is a Can/CGA B149.1 & .2 code requirement (Section 8.25.3 (o)) that *each appliance connection, valve, valve train*, shall be checked while under normal operating pressure with either a liquid solution, or leak detection device, to locate any source of leak.* Tighten any areas where bubbling appears or leak is detected until bubbling stops completely or leak is no longer detected. **Do NOT** use a flame of any kind to test for leaks.

Installing The Remote Switch

The E34-DV is equipped with a remote-operated valve, located behind the removable brass grille, to the right of the gas control valve (refer to Figure 21.) The valve is pre-wired and completely self contained to generate its own power. **DO NOT** connect any external power to it.

**Note:** The switch location must not exceed 30' from the fireplace.

Vent Installation

This section covers the installation of direct venting and terminations.

**Installation Requirements**

- Montigo 34 Series fireplaces use standard Venting components with: 4" inner dia. /7" outer dia.

- Minimum 1" clearance to combustibles required for vent pipes

- Use only certified Montigo vent components. (Use of other parts will void the Montigo warranty, and may impede the operation of the fireplace.)

- All joints must be secured with a minimum of two screws per joint

- Vent terminations must not be recessed in walls or siding

- Horizontal runs must be supported by a minimum of two supports per horizontal run. A minimum of one screw on each side of support is also required

- Flex vent sections may be stretched up to 50% of their total length (eg. a 24" section may be stretched to 36")

- Solid vent sections may be cut less than half way from the tapered end

**Vent Terminations**

**Selecting A Termination Location**

Choosing your vent termination location will help to determine whether you need to use a top vent or rear vent fireplace. Figure 6, below, shows typical fireplace locations and the venting options they provide.

For a more detailed diagram of allowed termination locations, see Appendix B.

![Figure 6. Fireplace locations and vent terminations.](image)

**CAUTIONS:**

- Vent terminations can be very hot. National Standards require that all terminations accessible to the public (below 7 feet from grade level, on balconies, or decks) be installed with a certified Montigo Heat Guard. (Part no. MTKOG)

- Do not obstruct, or attempt to conceal, the vent termination. These actions will affect the operation of the fireplace, and may be hazardous.

- In heavy snow areas, take extra care to prevent snow buildup from obstructing the vent termination.
Installation

Installing Terminations with Built-In Frames

1. Frame the termination opening to 11" x 11".
2. Fasten the termination to the studs using a minimum of 4 screws.

Installing Terminations with MSR Frames

1. Frame the termination opening to 12" x 12".
2. Fasten the termination to the studs using a minimum of 4 screws.

Installing Terminations with MOSR Frames

1. Frame the termination opening to 12" x 12".
2. Fasten the MOSR frame to the interior side of the studs using a minimum of 4 screws.
3. Insert the termination into the MOSR frame as shown here, and attach by screwing through the four pilot holes in the termination.

Installing Flex Terminations

1. Frame the termination opening to the appropriate size:

<table>
<thead>
<tr>
<th>TERMOFL-12F, -20F, MTKOFL-24F, -36F</th>
<th>11&quot; x 11&quot;</th>
</tr>
</thead>
<tbody>
<tr>
<td>ETKOFL-12, -20, MTKOFL-24, -36</td>
<td>12&quot; x 12&quot;</td>
</tr>
</tbody>
</table>

2. Feed the flex section through the framed opening and install in the same fashion as the standard PTKO terminations.

Installing Heat Guards over Terminations

1. Ensure that the two long mounting brackets are facing the bottom of the termination. (See inset). This will provide more heat protection at the top of the termination, where temperatures are highest.
2. Attach to the faceplate of the termination using four sheet metal screws.
Top Vent Venting Runs

Before you install any venting, you must determine whether the venting run will be acceptable. Unacceptable venting can affect the fireplace's combustion.

- the maximum horizontal vent run for a Top Vented unit is 20 feet

The Venting Graph

Measure the vertical height from the fireplace hearth to the centre of the termination and the horizontal run from the from the fireplace flue collar to the wall flange of the termination. Plot on the Venting Graph (Fig. 9) with an 'X'.

If the 'X' falls on or above the top boundary of the shaded area, the installation is acceptable.

Example A: (Acceptable Installation)

If the vertical dimension from the hearth is 108", and the horizontal run to the wall flange of the vent termination is 180", this would be an acceptable installation.

Example B: (Acceptable Installation)

If the vertical dimension from the hearth is 42" and the horizontal run to the wall flange of the vent termination is 72", this would be an acceptable installation.

Example C: (Unacceptable Installation)

If the vertical dimension from the floor of the fireplace is 60" and the horizontal run to the wall flange of the vent termination is 144", this would NOT be an acceptable installation.

![Venting Graph](image)

Figure 7. Venting Graph.

Installation Of Top Vent DV

A complete E34DV Top Vent system may comprise up to six individual components: (see figure 7).

<table>
<thead>

</tr>
<tr>
<td>F - 90° elbow</td>
<td>MEL-90 (90° elbow)</td>
</tr>
</tbody>
</table>

Example:

For our shortest venting configuration use components A, B, and F (see Figure 8).

Example:

A 10' section and elbow (MIHR-10) used in conjunction with 3 ft. flex section (MFL-3) will, when extended in a five foot chase, allow for a maximum horizontal run of twelve and one-half feet from the centre of the fireplace to outside wall and a minimum of 76" when retracted in opposite direction. (See Figure 9 and 10.)

'D' flex sections and 'E' solid sections may be used in conjunction with one another to obtain different possible horizontal length installations. **NOTE:** Flex section must not exceed maximum horizontal length of 3 feet. (See Figure 11.)
Heat Shields

Due to high flue temperatures, heat shields are required on all E34-DV installations at any point where the venting passes through a combustible wall. With the heat shield, vent clearances can be maintained at 1".

Figure 8. Heat Shield. Install by sliding over the vent pipe where it passes through combustible construction.

Figure 9. Extended installation using 3' Flex Section and MIHR-10.

Figure 10. Retracted installation using MIHR-10.

Figure 11. Horizontal flex installation.
Installation Of Vertical Vent DV

- Vertical Terminations must be installed:
  - minimum 2' (two feet) above the highest point where vent passes through the roof.
  - minimum 6' (six feet) from a mechanical air inlet
  - minimum 3' (three feet) from a parapet wall.

- Maximum vent height is 30 feet above fireplace.
  Note: Flame characteristics will change if the maximum vent height is used.

- Minimum clearances 1" from vent to all combustible materials must be maintained.

|                          | MRF-12 (7/12 - 12/12 pt.) |
|                          | MRF-16 (12/12 - 16/12 pt.) |

Figure 12. Straight, vertical venting using required MXT-10 adaptor.

- A maximum of two offsets with 90° bends may be made and shall not exceed total length of 25% of the vertical vent height, when measured center to center of piping.

Example: Typical vent installation.
20' vertical vent
2 - 2' offsets required
25% of 20' = 5' max. offset allowed
This venting configuration meets requirements.

Figure 13a. Vertical venting with 1 offset.

Figure 13b. Vertical venting with 2 offsets.
Heat Shields

Heat shields are required on all E34-DV models at any point where the venting passes through combustible construction.

![Image](heat_shields.png)

Figure 8. Heat Shield. Install by sliding over the vent pipe where it passes through combustible construction.

Installation Of Rear Vent DV

The following are typical E34-DVRV installations:

   For 4-6" thick stud walls. For 4" walls, use a stucco frame and a 5" termination. For 6" walls use a stucco frame and a 9" termination.

![Image](standard_installation.png)

Figure 14. Standard installation.

2. Extended Installation.
   For extended installations, use an EXT-5, -10 or -20 section, and a termination (and frame, if appropriate).

   **Note:** MEXT extensions may be cut to desired length but must never exceed 20'.

![Image](extended_installation.png)

Figure 15. Extended installation.

3. 45° Corner Installation.
   Use a 45° elbow, and a termination (and frame, if appropriate).

![Image](45_degree_corner.png)

Figure 17. Corner installation.

4. Corner Installation (45° or less)
   Use an ETKOFL-12 or -20 flexible termination (12" or 20" compressed length). Flex may be turned to obtain desired degree of angle required but must not exceed 45°.

![Image](flex_installation.png)

Figure 18. Flex installation.
Finishing Around the Fireplace

Combustible mantles and mouldings may be safely installed over the top and on the front of the fireplace provided that they do not project beyond shaded area shown in Figure 19a. Side wall clearances are 3". Combustible surrounds may be installed with 3" clearance to the side of the fireplace as shown in Figure 19b.

Fireplace Facing

When selecting the finish material for your fireplace, it is important to remember the following: BRASS TRIMS MUST NOT BE OBSTRUCTED IN ANY WAY - to do so restricts the air supply for the control compartments and heat exchanger it also prevents access for servicing controls.

The face of the fireplace may be painted to match the room decor, provided you use a heat-resistant paint. Decorative facing must not extend past the fireplace opening at all, because it will interfere with the access to retainers for removal of glass door.

Figure 19a. Combustible mantles and facings.

Mantels & Surrounds

NOTE: National Canadian Gas Association mantel test requirements are for fire hazard prevention to combustible materials.

New technology, to meet consumer and government demands for the wise use of energy, has prompted us to manufacture many models of fireplaces which are hot, fuel and energy efficient.

Please be aware; temperatures over the mantel will rise above normal room temperature and walls above fireplace may be hot to touch.

We recommend careful consideration be given to the effects of elevated mantel temperatures which may be in excess of product design, for example: candles, plastic or pictures. This can cause melting, deformation, discoloration or premature failure of T.V. and radio components.

Painting:

Special care is recommended by the Master Painters and Decorators Association, when painting the fireplace surrounds, to select and apply a quality Alkyd sealer prior to the applying of latex paints. This is to prevent leaching of water from evaporation and causing a brownish staining effect to paint over coats.
Wiring

Gas Control and Pilot Wiring

Figure 20. Wiring for the E34DV-I with Honeywell gas control and pilot.

Optional Fans

The E34-DV may be equipped with 2 or 4 optional fans for circulating heat into the living space. Installations in Canada which employ the fan kit, must be in accordance with CSA C22.1 Canadian Electrical Code Part 1 and/or Local Codes.

Installations in the USA employ the fan kit, must be in accordance with local codes or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70-1987.

NOTE: If any of the original wire supplied with the appliance is replaced, it must be replaced with the same type, or its equivalent.

Figure 21a. Wiring for optional fans.
Installing the Log Set

The E34DV is supplied with four (4) soft fibre logs. To install simply place log "A"s" rectangular shaped extension into the log mounting slot located on rear wall of the burner assembly. Place log "B" onto front log slots of the burner assembly. Place log "C" and log "D" onto the mating positions as shown in figure 20A below. When log set is installed it should look like figure 20B.

Figure 22a. Log installation.

Figure 22b. Completed log installation.

NOTES:
- If logs are not placed properly, excessive sooting will result.
- The surface of the logs will crack due to the heat from the flames. This is a normal occurrence.

Removing and Installing the Door

Removing the door surround:

The door surround is held in place by two metal clips at the top, and one magnet on each side. To remove the surround, pull the bottom outwards and lift upwards until the slots "A" are clear of tabs "B" in the door. You may need to use a flat screwdriver to pull the door surround outwards. (See figure 23a).

Figure 23a. Removing door surround.

Removing the door:

To install/remove the glass door simply attach/remove the four (4) machine screws, align tabs at the bottom of the door with the slots in the bottom door rail (See figure 23b). Ensure that a good seal is maintained.

Figure 23b. Installing Glass Door.
For Your Safety - READ BEFORE LIGHTING:

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

A. This appliance has a pilot which must be lighted by hand. When lighting the pilot, follow these instructions exactly.

B. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

What To Do If You Smell Gas:
- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbour’s phone. Follow the gas supplier’s instructions.

- If you cannot reach your gas supplier, call the Fire Department.
- Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don’t try to repair it, call a qualified service technician. Force or attempt to repair may result in a fire or explosion.
- Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system, and any gas control which has been under water.

Lighting Instructions:

1. STOP! Read the safety information above on this label.
2. Remove lower brass trim.
3. Push in gas control knob and turn clockwise to "OFF."
4. Wait five (5) minutes to clear out any gas. Smell for gas, including near the floor. If you then smell gas, STOP! Follow "B" in the safety information above on this label. If you don’t smell gas, go to the next step.
5. Locate pilot burner (See illustration at right.) and follow steps below.

- If knob does not pop up when released. Stop and immediately call your service technician or gas supplier.
- If the pilot will not stay lit after several tries, turn the gas control knob to "OFF" and call your service technician or gas supplier.

6. Turn knob on gas control counterclockwise to "PILOT."
7. Push in gas control knob completely and hold. Light with Piezo igniter button. Continue to hold the control knob in for about (1) minute after the pilot is lit. Release the knob and it will pop back up. Pilot should remain lit. If it goes out repeat steps 3 through 8.
8. Push in gas control knob and turn counterclockwise to "ON."
9. Replace lower brass trim.
10. Turn on remote switch to ignite fire.

To Turn Off Gas To Appliance:

1. Turn off remote switch.
2. Remove lower brass trim.
3. Push in gas control knob slightly and turn clockwise to "Off". Do not force.
4. Replace brass trim.
Operation - Model E34-DV-I

with Honeywell Intermittent Pilot

For Your Safety - READ BEFORE LIGHTING:

**WARNING:** If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

A. This appliance is equipped with an ignition system that lights the pilot burner automatically. Do not attempt to light the pilot by hand.

B. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

What To Do If You Smell Gas:
- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbour’s phone. Follow the gas supplier’s instructions.

- If you cannot reach your gas supplier, call the Fire Department.

C. Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don’t try to repair it, call a qualified service technician. Force or attempt to repair may result in a fire or explosion.

D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system, and any gas control which has been under water.

Lighting Instructions:

1. **STOP!** Read the safety information above on this label.

2. Remove lower brass trim.

3. Turn switch on the gas control to OFF*.

4. Wait 5 minutes to clear out any gas. If you smell gas, STOP! Follow "B" in the safety information above on this label. If you don’t smell gas, go to the next step.

5. Turn switch on the gas control to "ON". NOTE: This unit is equipped with an ignition system that lights the pilot burner automatically. Do not attempt to light the pilot by hand.

6. Turn on wall switch.

7. Replace lower brass trim.

8. If the fireplace does not operate, follow the instructions "To Turn Off Gas To Appliance" and call your service technician or gas supplier.

To Turn Off Gas To Appliance:

3. Turn the switch on the gas control to “Off”.

4. Replace brass trim.
**General**

**CAUTION**
- Fireplace gas control must be in the “OFF” position and pilot and main burners extinguished when cleaning appliance with a vacuum.
- Doors and logs can get very hot. Handle only when cool.

- Have the fireplace installation inspected yearly, including a visual check of the vent system, the burner and the pilot flame. For your convenience a 1/8" manifold pressure tap is supplied on the gas valve for a test gauge connection. See Figure 24.
- For Natural Gas this appliance requires a minimum inlet pressure of 5.5" W.C. and a manifold pressure of 3.5" W.C.
- For Propane Gas this appliance requires a minimum inlet pressure of 11" W.C. and a manifold pressure of 10" W.C.
- Always keep the fireplace area clear and free of combustible materials, as well as gasoline and other flammable vapors and liquids.
- Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

**Cleaning**

When the fireplace is first activated, there may be some smoking and a visible film may be left on the glass. This is a normal condition, and is the result of burning the protective coatings on new metal.

- Glass must be cleaned periodically to remove any film (a normal bi-product of combustion) which may be visible. Film can easily be removed by removing the door, as shown on page 12. Handle the door carefully, and clean it with glass cleaners. One of the most effective products is Kel Kern.
- Silicone seals on inner door during initial firing will "off gas", leaving a visual deposit of a white substance on combustion chamber walls. This can easily be removed by following the steps described above.
- Use a vacuum cleaner or whisk broom to keep the control compartment, burner, and firebox free from dust and lint.
- Logs may be cleaned periodically with a vacuum to remove soot.

**WARNING:**

Do not attempt to clean glass when hot.
Do not clean glass with abrasive materials as any glass etching may cause premature glass failure.

---

**E34-DV Gas Control Valve**

- Pilot Adjustment Screw
- Inlet Pressure
- Manifold Pressure Test Connection

**E34-DV Pilot Burner Adjustment**

1. Remove Pilot Adjustment Cap. ([See figure 24.](#))
2. Adjust pilot key to provide properly sized flame. ([See figure 25.](#))
3. Replace pilot adjustment cap.
4. After installing or servicing, leak test with a soap solution with main burner on. Coat pipe and tubing joints, gasket etc. with soap solution. Bubbles indicate leaks. Tighten any areas where the bubbles appear until the bubbling stops completely.

**Figure 24. SIT 820 gas valve.**

**Figure 25. Pilot Burner.**
Troubleshooting **E34-DV**

The following is a troubleshooting chart of possible problems:

<table>
<thead>

If your fireplace still does not operate correctly, consult your dealer or the manufacturer.

All service and repairs should be performed by a qualified agency.

All spare parts, optional fans (see optional fan instruction guide), and optional trim finishes are available from Canadian Heating Products Inc. or your local dealer.

**HONEYWELL SV 9500 /SV9600 Troubleshooting Sequence**

**NOTE:** Before Troubleshooting, Familiarize Yourself With The Startup And Checkout Procedure.

- **START**
  - Turn Gas Supply off
  - Set thermostat to call for heat
  - SV9500/SV9600
  - Is powered
    - (24 VAC nominal)

**CHECK:**
- Line voltage power
- Low-voltage transformer
- Limit Controller
- Thermostat
- Wiring
- Air passing switch on combustion air blower system
- Vent damper (if used) is open and round mode

**YES**

Unplug Pilot Burner Cable
Measure Voltage at SV9500/SV9600 HSI Terminals (24 VAC
Nominal, See **INSET**)

Replace Igniter/Flame Rod Assembly.

**NO**

**INSET**

**SYSTEM OK**

**YES**

Measure Voltage to SV9500/SV9600. Voltage must
be at least 19.5 VAC.

Replace Igniter/Flame Rod Assembly.

**NO**

**YES**

Check Transformer Line Volt
Supply

Replace SV9500/
SV9600. Store old
Igniter/Flame Rod Assembly for service.

**NO**

**YES**

Discard old Igniter/Flame Rod Assembly.

**SYSTEM OK**

**NO**

**SYSTEM OK**

**YES**

Replace Igniter/Flame Rod Assembly.
The Warranty
The Companies warrants the Montigo Gas Appliance to be free from defects in materials and workmanship at the time of manufacture. On the Montigo, there is a ten-year warranty on the firebox and its components, a five-year warranty on the main burner, pilot burner and a one-year warranty on the gas control valve and glass doors.

Remedy And Exclusions
The coverage of this Warranty is limited to all components of the Gas Appliance manufactured by The Companies.

This Warranty only covers Montigo Gas Appliances installed in the United States or Canada.

If the components of the Gas Appliance covered by this Warranty are found to be defective within the time frame stated (see The Companies right of investigation outlined below), The Companies will, at its option, replace or repair defective components of the Gas Appliance manufactured by The Companies at no charge, and will also pay for reasonable labour costs incurred in replacing or repairing components. If repair or replacement is not commercially practical, The Companies will, at its option, refund the purchase price of the Montigo Gas Appliance.

This Warranty covers only parts and labour as provided above. In no case shall The Companies be responsible for materials, components, or construction which are not manufactured or supplied by The Companies, or for the labour necessary to install, repair or remove such materials, components or construction. All replacement or repair components will be shipped F.O.B. the nearest The Companies factory.

Qualifications To The Warranty
The Gas Appliance Warranty outlined above is further subject to the following qualifications:

1. The Gas Appliance must be installed in accordance with The Companies installation instructions and local building codes. The Warranty on this Montigo Gas Appliance covers only the component parts manufactured by The Companies. The use of components manufactured by others with this Montigo Gas Appliance could create serious safety hazards, may result in the denial of certification by recognized national safety agencies, and could be in violation of local building codes. This warranty does not cover any damages occurring from the use of any components not manufactured or supplied by The Companies.

2. The Montigo Gas Appliance must be subjected to normal use. The Gas Appliances are designed to burn gas only. Burning conventional fireplace fuels such as wood, coal or any other solid fuel will cause damage to the Gas Appliance, will produce excessive temperatures and will result in a fire hazard.

Limitations On Liability
It is expressly agreed and understood that The Companies sole obligation, and purchaser's exclusive remedy under this Warranty, under any other warranty, expressed or implied, or in contract, tort or otherwise, shall be limited to replacement, repair, or refund, as specified above.

In no event shall The Companies be responsible for any incidental or consequential damages caused by defects in its products, whether such damage occurs or is discovered before or after replacement or repair, and whether or not such damage is caused by The Companies negligence. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you. The duration of any implied warranty with respect to this Montigo Gas Appliance is limited to the duration of the foregoing warranty. Some states do not allow limitation on how long an implied warranty lasts, so the above may not apply to you.

Investigation Of Claims Against Warranty
The Companies reserves the right to investigate any and all claims against this Warranty and to decide upon method of settlement.

The Companies Are Not Responsible For Work Done Without Written Consent

The Companies shall in no event be responsible for any warranty work done without first obtaining The Companies written consent.

Dealers Have No Authority To Alter This Warranty

The Companies employees and dealers have no authority to make any warranties nor to authorize any remedies in addition to or inconsistent with those stated above.

How To Register A Claim Against Warranty
In order for any claim under this Warranty to be valid, The Companies must be notified of the claimed defect in writing or by telephone, as soon as reasonably possible after the defect is discovered. Claims against this Warranty in writing should include the date of installation, and a description of the defect.

Other Rights
This Warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

NOTE: The Companies as stated above refer to - Canadian Heating Products Inc. and/or Montigo Del Ray Corp.

Canadian Heating Products Inc. and/or Montigo DelRay Corp. reserves the right to make changes at any time, without notice, in design, materials, specifications, prices and also to discontinue colors, styles and products.
Appendix B - Termination Locations
