Read and understand this manual. Improper installation, adjustment, alteration, service or maintenance can cause serious injury, property damage or even death. For assistance or additional information consult a qualified installer, service agency or the gas supplier.

DANGER

Do not store or use gasoline or any other flammable vapors and liquids in the vicinity of this or any other gas burning appliance. A fire or explosion may occur causing serious injury, property damage or even death.

WARNING

Installer: Leave this manual with the appliance. Do not remove.

NOTICE

IF YOU SMELL GAS

Do not try to light any appliance.
Do not touch any electrical switch; do not use any phone in your building.
Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
If you cannot reach your gas supplier, call the fire department.
You must read and understand this manual prior to installation, operation or troubleshooting this appliance. Please retain this owner’s manual for future reference and maintenance.

Introduction

Congratulations on your purchase of a Montigo Fireplace.

With over 30 years of experience, Montigo is committed to providing you with a gas fireplace that is not only a beautiful addition to your space, but that is also designed and manufactured to the highest safety, reliability and engineering standards.

We strongly encourage you to read and carefully follow the instructions laid out in this Installation, Operation and Maintenance Manual and retain it for your future reference. Pay special attention to all cautions, warnings, and notices throughout this manual intended to ensure your safety.

This manual covers installation, operation and maintenance. Lighting, operation and care of this fireplace can be easily performed by the homeowner. All installation and service work should be performed by a qualified or licensed installer, plumber or gas fitter as certified by the state, province, region or governing body where the fireplace is being installed.

This installation, operation and maintenance manual is applicable to the models described below. Refer to your rating plate to verify included options.

Warranty and Installation Information: (See Appendix B)

The Montigo warranty will be voided by, and Montigo disclaims any responsibility for the following actions:

► Modification of the fireplace and/or components including Direct-Vent assembly or glass doors.

► Use of any component part not manufactured or approved by Montigo in combination with this Montigo fireplace system.

► Installation other than as instructed in this manual.

Consult your local Gas Inspection Branch on installation requirements for factory-built gas fireplaces. Installation & repairs should be done by a qualified contractor.

Note: The HC34DF replaces the Previous HD34DF model.

This installation, operation and maintenance manual is applicable to the models described above. Refer to your rating plate to verify included options. Throughout this manual instructions are applicable to all models designated as H*34DF* unless otherwise noted.

H*34DF Indoor Gas Fireplace

Installation

Before You Start

IMPORTANT MESSAGE: SAVE THESE INSTRUCTIONS

The H*34DF* Direct Vent fireplace must be installed in accordance with these Instructions. Carefully read all the Instructions in this manual first. Consult the Local Gas Branch to determine the need for a permit prior to starting the installation. It is the responsibility of the installer to ensure this fireplace is installed in compliance with the manufacturer’s instructions and all applicable codes.

BEFORE YOU START:

NOTICE
Installation and repairs should be done by an authorized gas fireplace service technician. The appliance should be inspected before use and at least annually by a professional. More frequent cleaning may be required due to excessive lint from carpeting, bedding material, etc. It is imperative that control compartments, burners and circulating air passageways of the fireplace are kept clean.

CAUTION
Due to high operating temperatures, this appliance should be located out of traffic & away from furniture and draperies. Children and adults should be alerted to the hazards of the high surface temperature, which could cause burns or clothing ignition. Young children should be carefully supervised when they are in the same room as the appliance. Clothing or other flammable materials should not be placed on or near the appliance.

DANGER
When this appliance is installed directly on any combustible material other than wood flooring, it must be installed on a metal or wood panel extending the full width and depth of the appliance or a fire will occur causing serious injury, property damage or even death.

Installation Checklist

- Determine the desired install location of your fireplace.
- See Section 1, Dimensions on Page 7, and refer to the Framing Section 2 for details.
- Select the location of your termination and resulting vent run.
- Your selected termination location must be the highest point in the Direct Vent installation.
- Should it be impossible to meet the venting requirements laid out in Section 3: Venting, please contact a local Montigo dealer regarding the use of a Montigo Power Vent.
- Lay out the Vent run; calculating the required elbows and straight runs of 4”/7” flex and/or rigid pipe.
- Layout Electrical Requirements Refer to Section 4: Wiring, for Details.
- Refer to Section 5: Installing the Gas Line, for details on the gas connection and access.
- Refer to local codes and guidelines for installation requirements.
- Installation and repairs should be done by a qualified contractor and must conform to:

  • Installations in Canada must conform to the local codes or in the absence of local codes to the current version of Natural Gas and Propane Installation Code, CSA B149. Electrical Installations must conform to the local codes or, in the absence of local codes, to the current version of Canadian Electrical Code, CSA C22.1.1

  • Installations in the USA must conform to the local codes or in the absence of local codes to the current version of National Fuel Gas Code, ANSI Z223.1/NFPA 54. Electrical Installations must conform to the local codes or, in the absence of local codes, to the current version of the National Electrical Code, ANSI/NFPA 70. See Appendix C for installation within the State of Massachusetts.

WARNING
A barrier designed to reduce the risk of burns from hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at-risk individuals. If the barrier becomes damaged, the barrier shall be replaced with the manufacturer’s barrier for this appliance.

WARNING
Any safety screen, guard, or barrier removed for servicing an appliance must be replaced prior to operating the appliance.
**Standard Installation Checklist**

This standard installation checklist is to be used by the installer in conjunction with, not instead of, the instructions contained within this installation manual.

<table>

<th>YES</th>
<th>NO</th>
<th>IF NO, WHY NOT?</th>
</tr>
</thead>
</table>

**Appliance Install: Section 2**

- Framing complies with install manual.
- Standoffs have been installed.
- Proper clearances have been maintained.

**Venting: Section 3**

- Venting configuration complies with vent diagrams.
- Venting installed, fastened, and secured in place maintaining proper clearance.
- Firestops installed.
- Exterior wall/roof flashing installed and sealed in compliance with local building code.
- Terminations installed and sealed in compliance with local building code.
- Direct vent termination is highest point in vent assembly.

**Wiring/Electrical: Section 4**

- Unswitched power provided to the appliance PPO box.
- Low voltage wire connected to dry contact wall switch (non-powered).

**Gas: Section 5**

- Proper appliance for fuel type.
- Was a conversion performed?
- Leak check performed & inlet pressure verified.

**Finishing: Section 6**

- Only non-combustible materials installed in non-combustible areas.
- Clearances meet installation manual requirements
- Mantels and/or projections comply with install manual

**Appliance Setup: Section 7 through 9**

- Media, door, and screen installed according to install manual
- Manual given to home owner.
- Started appliance and verified no gas leaks exist.

**Safety Notice:**
- Do not install as a partial installation.
- Not for use with remote control, never use with electric fans.
- Not for use with solids gel / Press your button to close the cock.
- Vented Gas Fireplaces are not approved for exterior (cold) installation.
Section 1: Installation Overview and Product Dimensions

Please review the Installation Checklist on Page 4 for general information on preparing for a successful installation of your fireplace.

The H*34DF* fireplace may be installed in any location that maintains proper clearances to air conditioning ducts, electrical wiring and plumbing. Safety, as well as efficiency of operation, should be considered when selecting the fireplace location. Select a location that does not interfere with room traffic, has adequate ventilation and offers an accessible path for Direct Vent installation.

The fireplace dimensions are shown below:

![Diagram of fireplace dimensions]

**Figure 1.** *Fireplace dimensions (Tolerance ± ¼").*
Section 2: Framing

1). Frame in the enclosure for the unit with framing materials. The framed opening for the assembled fireplace is 33 ⅞" wide, x 39" high x 20" deep, see Figure 2.

NOTE: When constructing the framed opening, please ensure there is access to install the gas line when the unit is installed. See Figure 24.

Figure 2. Framing dimensions, (Straight wall & Corner Installation). (ALL Models, shown in Table on Page 3).

</tbody>
</table>

* When sheetrock is not used behind the fireplace, framing depth "O" may be reduced by 5/8".

Figure 3. Combustible Framing for shelves over the fireplace, Rear vent.

Figure 4. Combustible Framing for shelves over the fireplace, Top vent.

Figure 5. Non-Combustible Framing for Top Vent or Rear Vent, with Alcove ABOVE FIREPLACE.

Note: Images are shown without screens for clarity purposes. However, your fireplace should not be operated without proper installation of screens.
Installation

Clearances
When installing a shelf over the top of the fireplaces, the following guidelines must be adhered to:

For Rear Vent applications, the minimum clearance is 2" from the rear of the fireplace to a wall, or any combustible materials. A clearance to combustibles of 9" for H34DF* and a clearance to combustibles of 11" for HC34DF* & HL34DF* is required to the underside of any combustible shelf materials, Figure 3.

For Top Vent applications, the minimum clearance is 2" from the rear of the fireplace to a wall, or any combustible materials, and 17 1/2" to the underside of any combustible shelf materials, Figure 4.

For Top or Rear Vent applications where the Minimum mantel height is required above the fireplace, (for an alcove or low profile shelf), ALL Materials MUST BE NON-COMBUSTIBLE, Figure 5. The minimum clearance is 2" from the rear of the fireplace to a wall, or any combustible materials. 1" clearance is maintained on sides and bottom of vent runs and 2" above horizontal vent runs to any combustible material.

The fireplace clearances:

<table>
<thead>
<tr>
<th>MODEL</th>

<td>17 1/2</td>
<td>2</td>
<td>1</td>
<td>0</td>
<td></td>
</tr>
</tbody>
</table>

† Note: Clearance from top of fireplace to a ceiling within ......the fireplace enclosure.

Installing The Standoffs
To avoid elevated mantel temperatures, all H*34DF*-Series gas fireplaces are required to have the supplied standoffs installed. The fireplace is supplied with two standoffs. Bend and install these standoffs on top of the fireplace ensuring that the height of the standoff maintains a 6" clearance.

![Installing the standoffs.](image)

Installing the Nailing Flange Extension - HC34DF* Only
Once the fireplace is placed into the rough framed opening, the supplied nailing flange extension (Part No. HC34074) must be fasten securely into place, with nails or wood screws. as shown in Figure 7.

![Installing the Nailing Flange Extension, see , Figure 25a.](image)

The supplied nailing flange extension must be placed along the top edge of the fireplace and securely fastened in place to the combustible wood framing.

Note: The nailing flange extension can be substituted with a piece of NON-Combustible material of the same size and thermal characteristics, ie: cement board or equivalent. This is recommended in applications where the facing materials will not adhere to the metal nailing flange.

Note: Clearance from top of fireplace to a ceiling within ......the fireplace enclosure.
Section 3: Venting

Montigo supplies a variety of direct venting and termination options. The direct vent termination location MUST be selected such that it is the highest point in the venting assembly. It should also be selected such that it provides the shortest vent run possible. Should it be impossible to ensure that the termination is the highest point or to meet the venting guidelines laid out below please contact your Montigo dealer to discuss power venting options.

NOTES FOR PLANNING VENTING:

- Venting originates from the unit through the top or through the rear
- Venting can terminate through the roof or through an exterior wall.
- For a detailed diagram of allowed termination locations, see Appendix A.
- Once the termination location has been established, refer to the appropriate section below for installation details
- All fireplaces shipped from the factory are Top vent.
- Silicone application is NOT required when joining Montigo vent pipes and components.

Section 3-1: Converting to Rear Vent

Use the following instructions to convert an H*34DF for Rear Vent use:

1. Remove the Rear flue cover and gasket (4” and 7”) on the flue outlet, as shown in Figure 9.
2. Next, Remove the Top flue collar’s (4” and 7”) on the flue outlet, as shown in Figure 9.
3. Install the (removed) Rear flue cover and gasket material, to the Top vent outlet. Fasten the cover with included hardware, as illustrated Figure 9a.
4. Install the (4” and 7”) collars to the rear vent outlet using the included hardware, as illustrated Figure 9a.

Note: Images are shown without screens for clarity purposes. However, your fireplace should not be operated without proper installation of screens.

Figure 9. Flue cover and collar removal, Top Vented fireplace.

Figure 9a. Flue cover and collar installation, Rear Vented fireplace.
Section 3-2: Installing a Roof Mounted Direct Vent Termination (MVTK-1)

This section applies to installations where the direct vent termination will be roof mounted.

Section 3-2-1: Venting Layout: Roof Mounted Termination

Selection of components and details of venting lay out should adhere to the following guidelines:

- The maximum termination point is 32' above the fireplace (NOTE: if the maximum termination height is used, the flame pattern may be affected).
- The Vertical termination must be a minimum 2' higher than where the termination exits the roofing materials, (asphalt shingles, cedar shakes, etc). This distance should be measured from the high side of the roof slope where the flue flashing intersects the roofing materials. (see Figures 11 to 11c).
- Termination location must be a minimum 6' from a mechanical air inlet.
- For a more detailed diagram of allowed termination locations, see Appendix A.
- A maximum of two offsets (each offset is made up of 2-90° bends) may be made for vertical vent runs.
- Firestops must be installed as required by National & local codes.
- Ensure all horizontal runs are supported with a minimum of 3 supports per 10’ of venting.
- Install all roof flashing and storm collars as shown.

Roof mounted Terminations

The following details are some possible configurations for Roof mounted terminations.
Figure 11c. Rear vent, Roof mounted venting ($90^\circ$ bend).

Note: Images are shown without screens for clarity purposes. However, your fireplace should not be operated without proper installation of screens.
Section 3-3: Installing a Wall Mounted Direct Vent Termination
This section applies to installations where the direct vent termination will be wall mounted.

1). Installation of Termination with built in frame
A Termination with a Built-In Frame is installed during framing of a structure.
1. Frame the termination opening to 11" x 11".
2. Install exterior sheathing to the structure framing.
3. Fasten the termination to the sheathing using a minimum of 4 screws.

4). Installation of termination from inside structure
A Termination with a MOSR Frame is installed from the inside of the structure. These are commonly used in high-rise construction.

2). Installation of termination frame at time of framing
Terminations with a MSR frame allow the installation of the frame prior to installation of the termination.
1. Frame the termination opening to 12" x 12".
2. Secure the MSR Frame to the exterior sheathing of the structure.
3. Fasten the termination to the MSR Frame using a minimum of 4 screws.

3). Installation of termination frame at time of framing in Masonry
Terminations with a BSR frame allow the installation of the frame in masonry prior to the installation of the termination
1. Frame the BSR opening to 12" x 12".
2. Secure the BSR Frame to the exterior sheathing of the structure.

5). Installation of a termination shield for Vinyl Siding
The VSS Termination shield is installed when the exterior of a structure is clad with Vinyl siding. It is placed directly above, and on-center with the termination.

Installing Heat Guards over Terminations is recommended in installations where the termination is located within 7 feet above grade, or above a pedestrian walkway, and may be Required by code in Public areas.
Section 3-3-1: Venting Layout: Wall mounted termination

Selection of components and details of venting layout should adhere to the following guidelines:

Vent terminations must not be recessed in walls or siding. For Heat Shield requirements, see Section 3-3-3 on page 18. Once the proposed venting layout has been determined refer to Figure 14, 15, or 16 to ensure the layout is acceptable.

Wall mounted Terminations

The following details are some possible configurations for Wall mounted terminations.

Notes Wall Mounted Terminations: TOP VENT

■ All measurements for vertical or horizontal runs are measured from centre of the vent pipe.
■ Venting runs must fall within the limits set by the venting graph, see Figure 14 or 15.

The Venting Graph

Measure the vertical height from the fireplace hearth to the centre of the termination and the horizontal run from the fireplace flue collar to the wall flange of the termination. Plot on the Venting Graph Figure 14 or 15 with an ‘X’. If the ‘X’ falls on or above the top boundary of the shaded area, the installation is acceptable.

WARNING:

An inspection of the explosion relief flappers and door MUST be made prior to lighting the fireplace. Faulty seal on the door gasket and/or explosion ports will result in products of combustion leaking into the living space and may result in carbon monoxide poisoning.

Figure 14a. H34DFN Top Vent, wall mounted installation with 1 elbow (1 one 90° bend). The vent run must comply with Venting Graph for Top vent, wall mounted terminations, Figure 14.

Figure 15a. H*34DF Top Vent, wall mounted installation with 1 elbow (1 one 90° bend). The vent run must comply with Venting Graph for Top vent, wall mounted terminations, Figure 15.
**Installation**

**Figure 15b.** Top Vented, wall mounted Multi-elbow installation. See Venting Graph for Top vent, wall mounted terminations, Figure 14 or 15.

**Notes Wall Mounted Terminations:** TOP VENT

- All measurements for vertical or horizontal runs are measured from centre of the vent pipe.
- Venting runs must fall within the limits set by the venting graph, see Figure 16.
- The fireplace must be converted to Rear Vent configuration prior to running vent, see Figure 9 and 9a.

**The Venting Graph**

Measure the vertical height from the fireplace hearth to the centre of the termination and the horizontal run from the fireplace flue collar to the wall flange of the termination. Plot on the Venting Graph Figure 16 with an ‘X’.

If the ‘X’ falls on or above the top boundary of the shaded area, the installation is acceptable.

**Example A:** (Acceptable Installation)
If the vertical dimension from the hearth is 60” and the horizontal run to the wall flange of the vent termination is 24”, this would be an acceptable installation.

**Example B:** (Acceptable Installation)
If the vertical dimension from the hearth is 78” and the horizontal run to the wall flange of the vent termination is 60”, this would be an acceptable installation.

**Example C:** (Unacceptable Installation)
If the vertical dimension from the floor of the fireplace is 60” and the horizontal run to the wall flange of the vent termination is 120”, this would NOT be an acceptable installation.

**Figure 16.** H*34DF Rear Vent Venting Graph for wall mounted terminations, See Figures 16a or 16b.

**Figure 16a.** Straight run, Rear Vented, wall mounted termination for H*34DF, Figure 16.

**Figure 16b.** Rear Vented, wall mounted Multi-elbow termination installation. Multi-elbow venting installation for H*34DF must have a minimum vertical rise of 50”. The vent run must comply with the Venting Graph for Rear vent, wall mounted terminations, Figure 16.
45° Corner Installation.
Attach an EEL-45 (45° elbow) directly onto the flue collar. Cut the MXT-20 to suit, and attach it to the EEL-45. Slide the fireplace into position and attach to the termination.

45° or less Corner Installation.
Use an MTO-4 termination and an MFL-1 or MFL-2 (12" or 24" compressed length) and a frame, if appropriate. Flex may be turned to obtain desired degree of angle required but must not exceed 45°.

Note: Through the wall venting kits are also available for both the Straight and the Corner Installation. The Kit includes a heat shield, a MFL-12 (ff) flexible pipe, and a termination with or without a mounting frame.
Section 3-3-2: Venting Components

The following components and associated Montigo part numbers for installation of a roof or wall mounted termination. Use of non-Montigo approved parts will VOID the warranty and may impede operation of the fireplace.

</tbody>
</table>

Connection and installation of the vent components should adhere to the following guidelines:

- Use any combination of rigid and flex pipe as required and in any orientation (Male connectors can face in any direction).
- Flex sections may be stretched up to 50% of their total length (e.g. a 24" section maybe stretched to 36").
- Connect all vent sections using a minimum of three sheet metal screws on the outer pipe flue.
- Ensure the pipe ends male to female slide in a minimum of 1 1/2" of overlap.
- Ensure all horizontal runs are supported with a minimum of 3 supports per 10’ of venting.
- When hanging/supporting venting, ensure that 1” clearance is maintained on sides and bottom of vent runs and 2” above horizontal vent runs to any combustible material.
- Rigid pipe may be cut less than half way from the FEMALE END ONLY.
- Flex pipe cannot be cut
- Ensure when cutting sections of rigid pipe to maintain integrity of internal supports.
- For flex venting, place the springs supplied with the pipe kit, between the outer and inner pipes to keep the pipes separate and avoid any possible hot spots.
- Montigo recommends the use of a flex section for the final pipe connected directly to the fireplace offering greater flexibility of installation and absorption of movement.
- Firestops must be installed as required by National & local codes.

IMPORTANT:
Please Refer to your Building Envelope Engineer or Waterproofing Consultant for a review of ALL penetrations through exterior walls or the roof.
Section 3-3-3: Heat Shields

Installing a Wall Mounted RHS7 Heat shield
The RHS7 Heat shield CANNOT be used WITHIN 36” horizontal or 60” vertically of the fireplace, (see figure 18a). For applications within these dimensions the RHS100 Heat Shield MUST be used.

To install the RHS7, frame an opening in combustible construction, Figure 18 below. Slide the Heat shield in place over the vent pipe which attaches to the fireplace. After the fireplace and vent pipe has been installed, clearances should match the dimensions in Figure 18.

Installing a Wall Mounted RHS100 Heat shield.
The RHS100 Heat shield MUST be used where the RHS7 Termination (Figure 18 and 18a) CANNOT be used. Use the RHS100 within 36” horizontal or 60” vertical.

To install the RHS100, Slide the Inner Section over the vent pipe that will connect to the fireplace. Fasten the vent pipe to the back of the fireplace with a Min. of three sheet metal screws.

Next, slide the RHS100 outer section from the outside of the structure, see Figure 19.

To complete the installation fasten the Heat Shield Outer Section & Termination frame to the structure Figure 19a.

Note: Images are shown without screens for clarity purposes. However, your fireplace should not be operated without proper installation of screens.
Section 4: Wiring

Figure 20. Wiring Diagram for the SIT Proflame 2 Electronic Ignition

Figure 21. Wiring Diagram for SIT Nova 820 gas and pilot.

Figure 22. Wiring Diagram for Honeywell gas control and pilot.
Installing the remote On/Off Wall Switch
The H*34DF* gas valve may be connected to a wall switch. Do NOT connect any external power to the remote switch. The valve will generate its own power on a millivolt circuit or will draw its power from an AC Connection inside the fireplace, depending on the model of the unit. Use only low voltage wire, and DO NOT connect any external power to the remote switch.
Refer to Figure 20, 21, or 22 for wiring requirements.
NOTE: The switch location must not exceed 30’ from the fireplace.
NOTE: If any of the original wire supplied with the appliance is replaced, it must be replaced with the same type, or its equivalent.

CPI [Continuous Pilot Ignition] / IPI [Intermittent Pilot Ignition] Jumper Cable Installation on Proflame II Basic Board (only available for SIT Electronic Ignition Systems)

“Why use CPI mode”?  
CPI means “Continuous Pilot Ignition” or “Standing Pilot” as it is commonly known. IPI means “Intermittent Pilot Ignition”, which only initializes the pilot when you are going to be using the appliance.  
There are several reasons why you may choose to use CPI mode.  
When a flue is cold it can be difficult to light the appliance. It can take a bit of time (particularly on tall vents) to initialize vent action. This can result in “lifting” or “ghosting” of the flames during the first two to three minutes of operation. It is also possible to encounter times when the fireplace fails to light successfully. The fireplace will then attempt to re-light a second or third time depending on prevailing temperatures or altitude. When in CPI mode the pilot also keeps the system warm. During a “cold” start, condensation will normally form on the inner glass surface of the door. This condensation will quickly dry, however, the condensation tends to run down the glass and cause some streaking. CPI mode helps to resolve this issue. If CPI mode is used during the winter months the energy it takes to run the pilot is partially recovered as heat into the building, so it does not waste as much energy as running a pilot in the off season.

A connector is supplied with this unit that can be plugged into the controller. When the CPI jumper is plugged into the controller wiring harness the pilot will light and run continuously. Use the wall switch to turn on the main burner. Remove the CPI jumper to turn off CPI and return to IPI.

The difference between IPI and CPI:  
IPI (Intermittent Pilot Ignition) Mode: is a fuel saving mode in which the pilot is only used when the main burner is on.  
CPI (Continuous Pilot Ignition) Mode: The Pilot runs continuously even when the main burner is off.
Section 5: Installing the Gas Line

Section 5-1: Fuel Conversion
- Verify that your fireplace is compatible with your available gas type. (Natural Gas or Propane shown by "N" or "L" in your model number)
- If gas type is not compatible, contact your local Montigo representative.
- Conversion kits must be installed by a qualified service technician.

Section 5-2: Gas Pressure
- Optimum appliance performance requires proper input pressures.
- Gas line sizing requirements will be determined in ANSI Z221.3 National Fuel Gas Code in the USA and CAN/CGA B149 in Canada.

Pressure requirements are:

<table>
<thead>
<tr>
<th>Gas Pressure</th>
<th>Natural Gas</th>
<th>Propane</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum inlet pressure</td>
<td>5.5in. w.c.</td>
<td>11in. w.c.</td>
</tr>
<tr>
<td>Manifold pressure</td>
<td>3.5in. w.c.</td>
<td>10in. w.c.</td>
</tr>
</tbody>
</table>

- The manifold outlet pressure is set from the factory to the appropriate pressure but should be verified.
- To check pressures, control valves have a provision to remove a 1/8" N.PT. plug to be fitted with a hose barb.
- Montigo requires a service shut off valve be located in an accessible location to isolate the gas supply.
- Only install gas shut-off valves approved for use by the state, province, or other governing body in which the fireplace is being installed.

Section 5-3: Gas Connection
- See Figure 24 for location of gas line access.
- Flexible gas connectors must not exceed 3 feet in length, unless allowable within local regulations.
- Connect incoming gas line to the 1/2" or 3/8" gas inlet port.
- Purge all air out of gas line.
- Check appliance connection, valve and valve train under normal operating pressure with a commercially available leak check solution.
- DO NOT USE A FLAME OF ANY KIND TO TEST FOR LEAKS.

**WARNING:**

An inspection of the explosion relief flappers and door MUST be made prior to lighting the fireplace. Faulty seal on the door gasket and/or explosion ports will result in products of combustion leaking into the living space and may result in carbon monoxide poisoning.

**NOTICE**

Do not use ammonia based or abrasive cleaners on the glass, they will permanently etch the surface. Use an approved gas fireplace glass cleaner such as Kel-Kem or White off.

**WARNING!**

When pressure testing the fireplace, Gas line, and input system follow the appropriate local codes or your area. DO NOT connect the fireplace to pressures in excess of 1/2lb. This will damage the gas control valve.

**NOTICE**

Do not operate this fireplace without the glass door or with a broken glass door.
Section 6: Finishing

Finishing Around the Fireplace
Combustible mantels and mouldings may be safely installed over the top and on the front of the H34DF* & HL34DF* fireplaces provided that they do not project beyond shaded area shown in Figure 25. Fireplace HC34DF* must follow the graph, Figure 25a.

Fireplace Facing
When sizing the finish material for your fireplace, it is important to remember the following: THE OPENING MUST NOT BE OBSTRUCTED IN ANY WAY - to do so restricts the air supply for the control compartments and heat exchanger, it also prevents access for servicing controls.
The face of the fireplace may be painted to match the room decor, provided you use a heat-resistant paint. Decorative facing must not extend past the fireplace opening at all, because it will interfere with the access to retainers for removal of glass door.

WARNING!
We recommend careful consideration be given to the effects of elevated mantel temperatures which may be in excess of product design, for example: candles, plastic or pictures. This can cause melting, deformation, discolouration or premature failure of T.V. radio, and other electronic components.

WARNING!
When covering the upper metal portion of the fireplace, (HC34DF* ONLY) up to 3" (as shown, Fig. 25a) with a non-combustible material Please Note: The decorative facing materials may be subject to temperatures in excess of 250° F. This should be considered when selecting facing materials.

![Figure 25. Combustible mantels and facings, H34DF* and HL34DF*.](image-url)
Mantels & Surrounds

NOTE: National Canadian Gas Association mantel test requirements are for fire hazard prevention to combustible materials.

New technology, to meet consumer and government demands for the wise use of energy, has prompted us to manufacture many models of fireplaces which are hot, fuel and energy efficient.

Please be aware; temperatures over the mantel will rise above normal room temperature and walls above fireplace may be hot to touch. Side wall clearances are 3”. Combustible surrounds may be installed with 3” clearance to the side of the fireplace as shown in Figure 26 or 26a.

**WARNING**

Do not place any materials or objects on top of the valve blind. Doing so could result in failure of door relief system or heat dissipation.
Section 7: Screen Installation and Removal

Removing / Attaching Screens:

To Remove Screens:

Grasp each top outer corner of the screen with your thumb and finger and pull towards yourself. When the upper Screen Studs are free, lift the screen at an angle from the lower slots from which the Screen Bottom Tabs are held. Place the screen in a safe place.

To Install Screens:

Hold the screens at an angle away from the fireplace, and locate the Screen Bottom Tabs at the lower corners of the screen. Place the screen into the Screen Tab Receptacles in the lower section of the fireplace.

Make sure the tabs and screens are lowered all the way down into the Screen Tab Receptacles on the fireplace. Then, push each Upper Screen Stud on the top corners of the screen into the Upper Screen Stud Receptacles in the fireplace.

Replacement Screens:

For replacement part order numbers, please refer to section "Replacement Parts:" on page 41.

Note: Do not operate fireplace without all screens in place.
Section 8: Installing & Removing the Door

Removing the door:
The H*34DF* doors are removed in a few simple steps. Follow these instructions below to remove the Horizontal access panel, unlatch the door buckles and, remove the door. Replace in reverse order.

Remove the Horizontal Access Panel:

**WARNING**
When reinstalling door(s), always make sure all door buckles are properly hooked and fully engaged.

**Step 1:** Remove the Horizontal Access Panel:
Remove the Horizontal cover by placing fingers in both finger holes, then pushing away from you and lifting out. Place it aside during maintenance or cleaning. Install in reverse order.

**Step 2:** Locate the Door Buckles:

**Step 3:** Release the Door Buckles

**Step 4:**
Firmly grasp hand-hold end of Door buckle tool and place the machined end in the slot under door frame. (as shown)

**Step 5:**
Ensure the tool is firmly in the lower end of the slot, (as shown), Then pull toward you (Caution: hold the tool securely).

**Step 6:**
Pull hard if necessary to release the spring tension. (Caution: The latch springs back with force, hold the tool securely).

**Step 7:**
Remove the tool from the latch slot. Ensure the latches are hanging freely, the hook end is released from the bottom of the door. (Repeat all 4-steps for the remaining latches).

**Figure 27a.** Locate the door buckles.

**Figure 27b.** Door buckle Tool

**Figure 27c.**

**Figure 27d.**

**Figure 27e.**

**Figure 27f.**
Installation

Step 8: Removing the Door:
Grasp the Door on either side, usually midway and lift upward, lift the door carefully up and away from the front of the fireplace. See Figures 27g. Place the Door aside in a safe place while maintenance and/or cleaning is being performed.

Figure 27g. Removing and installing the glass doors.

Installing the Door:
To install the door, hook the top edge of the door frame into place. Lower the door into position and follow the previous steps shown in reverse order.

⚠️ WARNING
When installing the fireplace - gas lines, fittings, accessories or any other objects cannot impede the proper movement of the door buckles.
Section 9: Installing the Accessories

Installing the H34DF® Log Set (Part # LGSH34)

Installing the Logs:
The H34DF® fireplace is supplied with five ceramic fibre logs. Unpack the logs and handle them very carefully.

Step 1. Remove the glass door as described in the previous instruction.

Step 2. Install Bottom Rear log as shown in Figure 28b.

Step 3. Install Both front base logs, (Figure 28c) on the log stands provided. See Figure 28b.

Step 4. Place the top left log as shown in figure 28d. A flat area is provided on the front left log, and a notch in the Rear bottom log, as shown in figure 28c. Install the glass door. If the flame does not appear satisfactory, double-check the air inlet and exhaust outlet pipe to ensure that they are unobstructed.

Step 5. Place the top right log as shown in figure 28e. A notch is provided on the front right log, and a impression in the Rear bottom log.

Step 6. Start the fireplace. If the flame appears satisfactory, replace the glass door. If the flame does not appear satisfactory, double-check the air inlet and exhaust outlet pipe to ensure that they are unobstructed.

Step 7. Place the Embers as shown in figure 28f. Arrange the ember chips on top of the burner tray. Care should be taken when placing the embers, as blocked burner ports may cause an incorrect flame pattern, carbon deposits and delayed ignition. Also, the embers must NEVER be placed in a way that obstructs any of the air inlet ports, located at the rear of the burner, as shown in figure 28a.

NOTICE
If logs are not placed properly, excessive sooting will result.

Figure 28a. H34DF*’s Fireplace Base.

Figure 28b. Bottom/Rear log placement.

Figure 28c. Front base logs placement.

Figure 28d. Top Left log placement.

Figure 28e. Top right log placement.

Figure 28f. Placing Embers.
Installing the HC34DF* Log Set  
(Previous model HD34DF*) (Part # LGS44P)  

Installing the Logs:  
The HC34DF* is supplied Lava rocks, embers, and a seven piece ceramic fibre logset. Unpack the logs and handle them very carefully.  

Step 1. Remove the glass door as described in the previous instruction.  

Step 2. Place the Rear Log in position at the back of the fireplace as shown in Figure 29b below.  

Step 3. Place the Front Log in position just behind the black grate as shown in Figure 29c below.  

Step 4. Place the side logs as shown in Figure 29cc. These logs balance in the grooves of the base logs and do not lock into place.  

Step 5. Place the 3 middle logs as shown below in figure 29d.  

Step 6. Distribute lava rocks evenly in front tray as shown in figure 29e.  

Step 7. Distribute Embers under front log evenly as shown in figure 29e.  

Step 8. Start the fireplace. If the flame appears satisfactory, replace the glass door. If the flame does not appear satisfactory, double-check the air inlet and exhaust outlet pipe to ensure that they are unobstructed.  

NOTICE  
If logs are not placed properly, excessive sooting will result.
Installation

Installing Firestones - Concealed Burner (HLB34)
The HLB34DF* fireplace is supplied with firestones. Remove the Door as shown on page 25. Follow these instructions to ensure all parts are removed or replaced as required. Once the glass door is removed place the firestones randomly across the pan as described in Figure 30.

**CAUTION!**
DO NOT COVER THE BURNERS or PILOT

Figure 30. Completed firestone installation. Second Gen burner shown.
(Note: DO NOT place ANY firestones on top of the pilot).

Installing Firestones - Linear Burner (HL34)
The HL34DF* fireplace is supplied with firestones. Remove the Door as shown on page 27. Follow these instructions to ensure all parts are removed or replaced as required. Once the glass door is removed place the firestones randomly across the pan as described in Figure 30a to 30b.

**CAUTION!**
DO NOT COVER THE BURNERS or PILOT

Figure 30a. Completed firestone installation. Second Gen burner shown.
(Note: DO NOT place ANY firestones on top of the burners or pilot).

Figure 30b. Operating gas fireplace with firestones surrounding burner tray. Second Gen burner shown.

Optional Cultured Rocks
The H*34DF* has the option of installing the cultured rocks which mimic real stone. These may be spaced at random or in a visual pattern of your preference in the burner tray. See the Montigo web site for photographs and ideas. www.montigo.com

Designer River Rocks - Converting from H34DFN* to HR34DFN*:
To convert your H34DF fireplace to an HR34DF unit with designer river rocks, follow these instructions:

Note: Designer River Rock is approved for NG units only.

Kit Contents:

1. Remove existing ceramic logs from H34DF unit.

Figure 31a. Firebox with logs prior to ceramic fibre rock installation.

2. Remove lava rocks from lava tray and remove lava tray from around the burner.

Figure 31b. Removing lava tray from around burner.
4. Install the new Rock Tray and front cover. Make sure the tray is not sitting on top of the pilot.

5. Slide the rock guard locator tabs behind the Burner. The rocks on the Rock Guard should line up between the air inlets of the burner.

Installing the Designer River Rocks:
The HR34DF\textsuperscript{*} is supplied with (40) forty faux ceramic fibre river rocks. Unpack the rocks and handle them very carefully. Shown Below:

- 3 in 1 faux Rock "A" 1-pc
- 2 in1 Faux Rock "B & C" 2-pcs
- Rock "D" 5-pcs
- Rock "E" 32-pcs

Step 1. Remove the glass door as described in the previous instruction.

Step 2. Install Rear faux "A" ceramic 3 in1 Rock as shown in Figure 32b.

Step 3. Next, Install Centre (2) Two faux "B" and "C" ceramic 2 in 1 Rock as shown in Figure 32c. Note: Ensure the rocks do not cover the Burner holes, (reference lines of burner holes (straight lines) and outline or rocks (ovals) shown above, Figure 32b.)
Installation

Step 4. Install Front (3) three of the supplied (5) five faux ceramic "D" Rocks as shown in Figure 32b. Note cut surfaces of Rocks.

Step 5. Install the last (2) two faux ceramic "D" Rocks as shown in Figure 32c. Note cut surfaces of Rock toward back of firebox.

Step 6. Begin placement of the faux "E" ceramic rocks in the Left side of the firebox, Figure 32d & 32e. Note approximate placement.

Step 7. Continue placing the faux "E" ceramic rocks to the Right side of the firebox, as below. Note approximate random locations.

Step 8. Install the first faux ceramic "E" Rocks on top of the lower level of rocks. Continue placement of ceramic "E" Rocks, figures 32 through figure 32t, as shown.

Figure 32c. Placement of faux ceramic rock "B" & "C". Note decreasing size of rock diameters toward centre of burner.

Figure 32d. Place (3) three faux "D" ceramic Rocks between burner and front of firebox frame, (flat surfaces of rock against the front of door opening and bottom pan of the fireplace). Note similar size of rock diameters.

Figure 32e. Place the remaining (2) two faux "D" ceramic Rocks on top of faux the "A" (3 in 1 ceramic rock,) (flat surfaces of rock against back of firebox.

Figure 32f. Place (3) three faux "D" ceramic Rocks as shown in Figure 32b. Note cut surfaces of Rocks.

Figure 32g. Place the remaining (2) two faux "D" ceramic Rocks as shown in Figure 32c. Note cut surfaces of Rock toward back of firebox.

Figure 32h. Right side of firebox.

Figure 32i. Continue placing.

Figure 32j. Place the forth Top faux Rock on top of the previous (2) two Rocks.

Figure 32k. Place the first Top faux Rock.

Figure 32l. Place the second Top faux Rock between the far left and centre inlet Ports.

Figure 32m. Place the third Top faux Rock between the far right and centre inlet Ports.

Figure 32n. Place the forth Top faux Rock on top of the previous (2) two Rocks.

Figure 32o. Place the fifth Top faux Rock on top, behind the pilot assembly cover.
Figure 32p. Place the sixth Top faux Rock on top, behind the pilot burner faux Rocks.

Figure 32q. Place the seventh Top faux Rock in the front.

Figure 32r. Place the eight Top faux Rock in the front to the Right of the last Rock.

Figure 32s. Completed faux Rock installation.

Note: You may have to move or rotate the Top faux rocks to assure the best possible flame pattern and effect.
Section 10: Operation - Start up Sequence

For Your Safety - READ BEFORE LIGHTING:

WARNING

If the information in these instructions is not followed exactly, a fire or explosion may result causing property damage, personal injury or death.

WARNING/ CAUTION: Hot while in operation. Do not touch. Severe burns may result. Keep children, clothing, furniture, gasoline and other liquids having flammable vapours away. See installation and operating instructions accompanying this appliance.

A. This appliance is equipped with an ignition system that lights the pilot burner automatically. Do not attempt to light the pilot by hand.

B. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

What To Do If You Smell Gas:
- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the Fire Department.
- Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don't try to repair it, call a qualified service technician. Force or attempt to repair may result in a fire or explosion.
- Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system, and any gas control which has been under water.

Standing (Continuous) Pilot Ignition (SIT NOVA 820)

Lighting Instructions:

1. STOP! Read the safety information above on this label.
2. Lift out the lower Horizontal access panel.
3. Push in gas control knob and turn clockwise to "OFF."
4. Wait five (5) minutes to clear out any gas. Smell for gas, including near the floor. If you then smell gas, STOP! Follow "B" in the safety information above on this label. If you don't smell gas, go to the next step.
5. Locate pilot burner (See illustration at right.) and follow steps below.
6. Turn knob on gas control counter clockwise to "PILOT."
7. Push in gas control knob completely and hold. Light with Piezo Igniter button. Continue to hold the control knob in for about (1) minute after the pilot is lit. Release the knob and it will pop back up. Pilot should remain lit. If it goes out repeat steps 3 through 8.
- If knob does not pop up when released. Stop and immediately call your service technician or gas supplier.
- If the pilot will not stay lit after several tries, turn the gas control knob to "OFF" and call your service technician or gas supplier.
8. Push in gas control knob and turn counter-clockwise to "ON."
9. Replace the lower Horizontal access panel.
10. Turn on remote switch to ignite fire.

To Turn Off Gas To Appliance:

1. Turn off remote switch.
2. Lift out the lower Horizontal access panel.
3. Push in gas control knob slightly and turn clockwise to "Off". Do not force.
4. Replace the lower Horizontal access panel.
**SIT Proflame 2 Electronic Ignition**

**Lighting Instructions:**

1. **STOP!** Read the safety information above on this label.
2. Remove the lower Horizontal access panel.
3. Turn "ON" manual "ON/OFF" switch located below the horizontal access panel (if available).
4. Turn incoming gas valve to the ON position.
5. Wait 5 minutes to clear out any gas. If you smell gas, STOP! Follow "B" in the safety information above on this label. If you don’t smell gas, go to the next step.
6. Turn fireplace "ON" using wall switch or remote control.
7. If the Fireplace does not light, the System will cycle through two trials, (one minute audible clicking, thirty seconds of silence, and then another one minute of audible clicking). If the system locks out due to inadequate gas flow, refer to “Troubleshooting” in instruction guide.
8. After completion of the information in the Troubleshooting section, Repeat step 5.
9. If the system will not function correctly, follow the instructions "To Turn Off Gas To Appliance" and call your service technician or gas supplier.

**Typical Control Module shown**

**To Turn Off Gas To Appliance:**

1. Turn off fireplace using wall switch or remote control.
2. Remove the lower Horizontal access panel.
3. Turn the incoming gas control valve to "Off".
4. Replace the lower Horizontal access panel.
**Operation**

1. **STOP!** Read the safety information above on this label.
2. Flip down the lower trims.
3. Turn switch on the gas control to OFF.
4. Wait 5 minutes to clear out any gas. If you smell gas, STOP! Follow "B" in the safety information above on this label. If you don't smell gas, go to the next step.
5. Turn switch on the gas control to "ON". NOTE: This unit is equipped with an ignition system that lights the pilot burner automatically. Do not attempt to light the pilot by hand.
6. Turn on wall switch.

**Honeywell Electronic Ignition**

**Lighting Instructions:**

1. **STOP!** Read the safety information above on this label.
2. Flip down the lower trims.
3. Turn switch on the gas control to OFF.
4. Wait 5 minutes to clear out any gas. If you smell gas, STOP! Follow "B" in the safety information above on this label. If you don't smell gas, go to the next step.
5. Turn switch on the gas control to "ON". NOTE: This unit is equipped with an ignition system that lights the pilot burner automatically. Do not attempt to light the pilot by hand.
6. Turn on wall switch.
7. Flip up the lower trim.
8. If the fireplace does not operate, follow the instructions "To Turn Off Gas To Appliance" and call your service technician or gas supplier.

**To Turn Off Gas To Appliance:**

1. Turn off remote switch.
2. Flip down the lower trim.
3. Turn the switch on the gas control to "Off".
4. Flip up the trim.
Maintenance

Lighting Instructions
See pages 35 to 37.

General

Have the fireplace and installation inspected yearly. The inspection must include, but is not limited to, the following:

- A visual check of the entire vent system and termination.
- An inspection of the explosion relief flappers and the door gaskets to ensure a proper seal.
- An inspection of the burner, vent run, and primary air openings.
- An inspection of the gas valve, gas components, and pilot flame. For your convenience a 1/8” manifold pressure tap is supplied on the gas valve for a test gauge connection.
- Ensure proper log placement as per this manual.
- Inspection of all optional equipment; fans, thermostats, etc.

For Natural Gas this appliance requires a minimum inlet pressure of 5.5” W.C. and a manifold pressure of 3.5” W.C.

For Propane Gas this appliance requires a minimum inlet pressure of 11” W.C. and a manifold pressure of 10” W.C.

Always keep the fireplace area clear and free of combustible materials, as well as gasoline and other flammable vapours and liquids.

Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

Inspection of glass doors and screen for damage and proper installation.

Cleaning

When the fireplace is first activated, there may be some smoking and a visible film may be left on the glass. This is a normal condition, and is the result of burning of protective coatings on new metal.

- Glass must be cleaned periodically to remove any film (which is a normal by-product of combustion) which may be visible. Film can easily be removed by removing the door, as shown on Page 27. Handle the door carefully, and clean it with non-abrasive glass cleaners. One of the most effective products is Kel Kem.
- Silicone seals on inner door during initial firing will "off gas", leaving a visual deposit of a white substance on combustion chamber walls. This can easily be removed from the chamber walls using normal household products.
- Use a vacuum cleaner or whisk broom to keep the control compartment, burner, and firebox free from dust and lint.
- Logs may be cleaned periodically with a vacuum to remove soot or other contaminates.

Hi-Lo Burner Adjustment: (SIT Nova 820).

The H*34DF* is equipped with an adjustable burner, allowing you to raise or lower the flames. To adjust the flames, locate the black knob marked ‘Hi-Lo’, in the centre of the gas control valve (See Figure 33).

To raise the flame height, turn the black knob (located behind the lower control compartment) counter-clockwise.

To lower the flame height, turn clockwise.

Hi-Lo Burner Adjustment: (SIT Proflame 2).

The H*34DF*I is equipped with an adjustable burner, allowing you to raise or lower the flames. To adjust the flames, locate the black knob marked ‘Hi-Lo’, in the centre of the gas control valve (See Figure 34).

To raise the flame height, turn the black knob (located behind the lower control compartment) counter-clockwise.

To lower the flame height, turn clockwise.
HC34DFM Mobile Home Fireplaces:
The mobile home option is factory installed on the HC34DFM gas fireplaces, and are for use in a manufactured or mobile home.

This appliance may be installed as an OEM installation in a manufactured home (USA only) or mobile home. This model must be installed in accordance with the manufacturer’s instructions and the Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280, in the United States or The Mobile Home Standard, CAN/CSA Z240 MH Series, in Canada, and ANSI/NFPA 501A, in the United States. This appliance is only for use with the type(s) of gas indicated on the rating plate. A conversion kit is supplied with the unit.

Note:
Electronic Ignition models are not approved for use in mobile or manufactured homes.

Gas Control Valve
The following gas control valve is installed on the HC34DFM.

Annual inspection list for determining safe operation of a direct vent gas fireplace

<table>
<thead>
<tr>
<th>No.</th>
<th>Inspection Item</th>
</tr>
</thead>
<tbody>
<tr>
<td>1)</td>
<td>Inspect and operate the pressure relief mechanism to verify relief mechanisms are free from obstruction to operate.</td>
</tr>
<tr>
<td>2)</td>
<td>Clean glass window with a suitable fireplace glass cleaner. Abrasive cleaners must not be used. Be careful not to scratch the glass when cleaning.</td>
</tr>
<tr>
<td>3)</td>
<td>Inspect the operation of the flame safety system Pilot or Flame rectification device.</td>
</tr>
<tr>
<td>4)</td>
<td>Inspect and ensure the lighting of the main burner occurs within 4 seconds of the main gas valve opening. Visual inspection should match that outlined in the appliance instruction manual. Inspect primary air openings for blockage.</td>
</tr>
<tr>
<td>5)</td>
<td>Inspect condition of vent and vent terminal for sooting or obstruction and correct if present.</td>
</tr>
<tr>
<td>6)</td>
<td>Vacuum and clean any debris in the firebox that is not supposed to be there.</td>
</tr>
<tr>
<td>7)</td>
<td>Test and measure the flame failure response time of the flame safety system. It must de-energize the safety shutoff in no more than 30 seconds.</td>
</tr>
<tr>
<td>8)</td>
<td>Check all accessible gas-carrying tubes, connections, pipes and other components for leaks.</td>
</tr>

</table>
Maintenance

Troubleshooting:

SIT Nova 820:

The following is a troubleshooting chart of possible problems:

<table>
<thead>
<tr>
<th>PROBLEM</th>
<th>CORRECTIVE ACTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Noisy Pilot Flame</td>
<td>Locate pilot adjustment screw on gas control valve. Flame is decreased by turning adjustment screw clockwise.</td>
</tr>
<tr>
<td>Pilot won't ignite</td>
<td>Disconnect remote wires and try to light pilot. If pilot now works, remote connections are faulty. Check wiring diagram figure 30.</td>
</tr>
<tr>
<td>Main burner will not light</td>
<td>1. Check wiring (see figure 30) 2. Check wall switch for proper connection</td>
</tr>
</tbody>
</table>

Honeywell:

The following is a troubleshooting chart of possible problems:

<table>
<thead>
<tr>
<th>PROBLEM</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pilot Igniter won't spark</td>
<td>1. Check the MAIN ON-OFF switch (typically located below the valve cover) and turn ON 2. Ensure main power is ON or new batteries are installed in the remote control and backup battery pack (if available). 3. Check the 3.15A fuse in the control box and replace if necessary</td>
</tr>
<tr>
<td>Pilot igniter sparking, but pilot burner will not light</td>
<td>1. Verify the Inlet and Manifold Gas Pressure are within acceptable limits 2. Check all connections to gas valve 3. Check connection to stepper motor (if available)</td>
</tr>
<tr>
<td>Pilot lights, but main burner will not light and igniter continues to spark</td>
<td>1. Check the Pilot Flame Sensor Rod and clean with steel wool or similar. 2. Check the Pilot hood and clean with steel wool if dirty. 3. Adjust pilot flame using the pilot adjustment screw if the pilot flame is too long or too short (Flame should fully engulf the sensor rod and must be stable). 4. Check and make sure the ground wire from the pilot is connected to the fireplace body.</td>
</tr>
<tr>
<td>Fans not working</td>
<td>1. Ensure main power is ON (fireplace may be operating on back up batteries). 2. Check the 3.15A fuse in the control box and replace if necessary</td>
</tr>
</tbody>
</table>

If your fireplace still does not operate correctly, consult your local Montigo dealer.

All service and repairs should be performed by a qualified Technician.

All spare parts, optional fans, and optional trim finishes are available from your local Montigo dealer.

<tr>
<td>W Horizontal clearance (centre to centre) between two terminations that are not level</td>
<td>18 inches</td>
<td>18 inches</td>
</tr>
</tbody>
</table>

**Note 1:** For N a vent shall not terminate directly above the sidewalk or paved driveway which is located between two single family dwellings and serve both dwellings.

**Note 2:** For P only permitted if veranda, porch, deck, or balcony is fully open on a minimum of two sides beneath the floor.

**Note 3:** For J, K, and L as specified in CGA B149 installation code. Local codes or regulations may vary.

* Based on CGA B149.1 Natural Gas and Propane installation code. Local codes may vary, please check with local regulatory agency.

** Based on ANSI Z223.1/NFPA 54 National Fuel Gas Code. Local codes may vary, please check with local regulatory agency.
Appendix

Appendix B: Warranty

The Warranty

The Company warrants the Montigo Gas Appliance to be free from defects in materials and workmanship at the time of manufacture. On the Montigo fireplace, there is a ten-year warranty on the firebox and its components, a five-year warranty on the main burner and pilot burner, and a one-year warranty on the gas control valve, fibre logs and Power Vent Module. The Glass, plated/painted finishes, and refractory lining are exempt from the warranty.

Remedy And Exclusions

The coverage of this Warranty is limited to all components of the Gas Appliance manufactured by The Company.

This Warranty only covers Montigo Gas Appliances installed in the United States or Canada.

If the components of the Gas Appliance covered by this Warranty are found to be defective within the time frame stated (see The Company's right of investigation outlined below). The Company will, at its option, replace or repair defective components of the Gas Appliance manufactured by The Company at no charge, and will also pay for reasonable labour costs incurred in replacing or repairing components. If repair or replacement is not commercially practical, The Company will, at its option, refund the purchase price of the Montigo Gas Appliance.

This Warranty covers only parts and labour as provided above. In no case shall The Company be responsible for materials, components, or construction which are not manufactured or supplied by The Company, or for the labour necessary to install, repair or remove such materials, components or construction. All replacement or repair components will be shipped F.O.B. the nearest The Company's factory.

Qualifications To The Warranty

The Gas Appliance Warranty outlined above is further subject to the following qualifications:

1. The Gas Appliance must be installed in accordance with The Company's installation instructions and local building codes. The Warranty on this Montigo Gas Appliance covers only the component parts manufactured by The Company. The use of components manufactured by others with this Montigo Gas Appliance could create serious safety hazards, may result in the denial of certification by recognized national safety agencies, and could be in violation of local building codes. This warranty does not cover any damages occurring from the use of any components not manufactured or supplied by The Company.

2. The Montigo Gas Appliance must be subjected to normal use. The Gas Appliances are designed to burn gas only. Burning conventional fireplace fuels such as wood, coal or any other solid fuel will cause damage to the Gas Appliance, will produce excessive temperatures and will result in a fire hazard.

Limitations On Liability

It is expressly agreed and understood that The Company's sole obligation, and purchaser's exclusive remedy under this Warranty, under any other warranty, expressed or implied, or in contract, tort or otherwise, shall be limited to replacement, repair, or refund, as specified above.

In no event shall The Company be responsible for any incidental or consequential damages caused by defects in its products, whether such damage occurs or is discovered before or after replacement or repair, and whether or not such damage is caused by The Company's negligence. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you. The duration of any implied warranty with respect to this Montigo Gas Appliance is limited to the duration of the foregoing warranty. Some states do not allow limitation on how long an implied warranty lasts, so the above may not apply to you.

Investigation Of Claims Against Warranty

The Company reserves the right to investigate any and all claims against this Warranty and to decide upon method of settlement.

The Companies Are Not Responsible For Work Done Without Written Consent

The Company shall in no event be responsible for any warranty work done without first obtaining The Company's written consent.

Dealers Have No Authority To Alter This Warranty

The Company employees and dealers have no authority to make any warranties nor to authorize any remedies in addition to or inconsistent with those stated above.

How To Register A Claim Against Warranty

In order for any claim under this Warranty to be valid, The Company must be notified of the claimed defect in writing or by telephone, as soon as reasonably possible after the defect is discovered. Claims against this Warranty in writing should include the date of installation, and a description of the defect.

Other Rights

This Warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

NOTE: The Company as stated above refer to - Canadian Heating Products Inc. and/or Montigo Del Ray Corp.

Canadian Heating Products Inc. and Montigo Del Ray Corp. reserves the right to make changes at any time, without notice, in design, materials, specifications, prices and also to discontinue colors, styles and products.
(1) Revise NFPA-54 section 10.5.4.2 by adding a second exception as follows:

Existing chimneys shall be permitted to have their use continued when a gas conversion burner is installed, and shall be equipped with a manually reset device that will automatically shut off the gas to the burner in the event of a sustained back-draft.

(2) Revise 10.8.3 by adding the following additional requirements:

(a) For all side wall horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than seven (7) feet above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

1. INSTALLATION OF CARBON MONOXIDE DETECTORS. At the time of installation of the side wall horizontal vented gas fueled equipment, the installing plumber or gas fitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gas fitter shall observe that a battery operated or hard wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors.
   a. In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or an attic, the hard wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level.
   b. In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

2. APPROVED CARBON MONOXIDE DETECTORS. Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2034 listed and IAS certified.

3. SIGNAGE. A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2) inch in size, “GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS”.

4. INSPECTION. The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.08(2)(a)1 through 4.

(b) EXEMPTIONS: The following equipment is exempt from 248 CMR 5.08(2)(a)1 through 4:

1. The equipment listed in Chapter 10 entitled “Equipment Not Required To Be Vented” in the most current edition of NFPA 54 as adopted by the Board; and
2. Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

(c) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM PROVIDED. When the manufacturer of Product Approved side wall horizontally vented gas equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:

1. Detailed instructions for the installation of the venting system design or the venting system components; and
2. A complete parts list for the venting system design or venting system.

(d) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM NOT PROVIDED. When the manufacturer of a Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for venting the flue gases, but identifies “special venting systems”, the following requirements shall be satisfied by the manufacturer:

1. The referenced “special venting system” instructions shall be included with the appliance or equipment installation instructions; and
2. The “special venting systems” shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

(e) A copy of all installation instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.

(3) After NFPA-54 section 10.10.4.2 add a new section 10.10.4.3 as follows:

When more than four gas appliances are to be vented through a common gas vent or common horizontal vent manifold, a plan of the proposed vent installation shall be submitted to the Inspector and the serving gas supplier for review and approval.
