Read and understand this manual. Improper installation, adjustment, alteration, service or maintenance can cause serious injury, property damage or even death. For assistance or additional information consult a qualified installer, service agency or the gas supplier.

DANGER

Do not store or use gasoline or any other flammable vapors and liquids in the vicinity of this or any other gas burning appliance. A fire or explosion may occur causing serious injury, property damage or even death.

WARNING

Installer: Leave this manual with the appliance. Do not remove.

NOTICE

This fireplace is certified to ANSI 21.88 / CSA 2.33 vented gas fireplace heater standard as a direct vent fireplace.

DANGER

IF YOU SMELL GAS

Do not try to light any appliance.
Do not touch any electrical switch; do not use any phone in your building.
Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
If you cannot reach your gas supplier, call the fire department.
NOTICE
You must read and understand this manual prior to installation, operation or troubleshooting this appliance. Please retain this owner’s manual for future reference and maintenance.

Introduction

Congratulations on your purchase of a Montigo Fireplace.

With over 30 years of experience, Montigo is committed to providing you with a gas fireplace that is not only a beautiful addition to your space, but that is also designed and manufactured to the highest safety, reliability and engineering standards.

We strongly encourage you to read and carefully follow the instructions laid out in this Installation, Operation and Maintenance Manual and retain it for your future reference. Pay special attention to all cautions, warnings, and notices throughout this manual intended to ensure your safety.

This manual covers installation, operation and maintenance. Lighting, operation and care of this fireplace can be easily performed by the homeowner. All installation and service work should be performed by a qualified or licensed installer, plumber or gas fitter as certified by the state, province, region or governing body where the fireplace is being installed.

This installation, operation and maintenance manual is applicable to the models described in the table. Refer to your rating plate to verify included options. Throughout this instruction guide, instructions are applicable to all models designated as L52DF* unless otherwise noted.

### Safety Alert Key

### Introduction

**CAUTION**

Young children should be carefully supervised when they are in the same room as the appliance. Toddlers, young children and others may be susceptible to accidental contact burns. A physical barrier is recommended if there are at risk individuals in the house. To restrict access to a fireplace or stove, install an adjustable safety gate to keep toddlers, young children and other at risk individuals out of the room and away from hot surfaces.

### Warranty and Installation Information:

The Montigo warranty will be voided by, and Montigo disclaims any responsibility for the following actions:

- Modification of the fireplace and/or components including Direct-Vent assembly or glass doors.
- Use of any component part not manufactured or approved by Montigo in combination with this Montigo fireplace system.
- Installation other than as instructed in this manual.

Consult your local Gas Inspection Branch on installation requirements for factory-built gas fireplaces. Installation & repairs should be done by a qualified contractor.
Section A: Before You Start

IMPORTANT MESSAGE: SAVE THESE INSTRUCTIONS
The L52DF* Direct Vent fireplace must be installed in accordance with these Instructions. Carefully read all the Instructions in this manual first. Consult the Local Gas Branch to determine the need for a permit prior to starting the installation. It is the responsibility of the installer to ensure this fireplace is installed in compliance with the manufacturer’s instructions and all applicable codes.

BEFORE YOU START:

Installation Checklist

- Determine the desired install location of your fireplace.
- See Section 1, Dimensions on Page 6, and refer to the Framing Section 2 for details.
- Select the location of your termination and resulting vent run.
- Your selected termination location must be the highest point in the Direct Vent installation.
- Should it be impossible to meet the venting requirements laid out in Section 3: Venting, please contact Montigo regarding the use of a Montigo Power Vent.
- Lay out the Vent run; calculating the required elbows and straight runs of 5”/8” flex and/or rigid pipe.
- Layout Electrical Requirements Refer to Section 4: Wiring, for Details.
- Refer to Section 5: Installing the Gas Line, for details on the gas connection and access.
- Refer to local codes and guidelines for installation requirements.
- Installation and repairs should be done by a qualified contractor and must conform to:
  - Installations in Canada must conform to the local codes or in the absence of local codes to the current version of Natural Gas and Propane Installation Code, CSA B149. Electrical Installations must conform to the local codes or, in the absence of local codes, to the current version of Canadian Electrical Code, CSA C22.1.1
  - Installations in the USA must conform to the local codes or in the absence of local codes to the current version of National Fuel Gas Code, ANSI Z223.1/NFPA 54. Electrical Installations must conform to the local codes or, in the absence of local codes, to the current version of the National Electrical Code, ANSI/NFPA 70. See Appendix C for installation within the State of Massachusetts

• Installations in Canada must conform to the local codes or in the absence of local codes to the current version of Natural Gas and Propane Installation Code, CSA B149. Electrical Installations must conform to the local codes or, in the absence of local codes, to the current version of Canadian Electrical Code, CSA C22.1.1

• Installations in the USA must conform to the local codes or in the absence of local codes to the current version of National Fuel Gas Code, ANSI Z223.1/NFPA 54. Electrical Installations must conform to the local codes or, in the absence of local codes, to the current version of the National Electrical Code, ANSI/NFPA 70. See Appendix C for installation within the State of Massachusetts

WARNING

A barrier designed to reduce the risk of burns from hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at-risk individuals.

If the barrier becomes damaged, the barrier shall be replaced with the manufacturer’s barrier for this appliance.

WARNING

Any safety screen, guard, or barrier removed for servicing an appliance must be replaced prior to operating the appliance.

### Teklynx LabelView Demo

- **Model No.**: SIT-000000000
- **Serial No.**: 1-52017-00000000
- **Type**: L2DF - Indoor Gas Fireplace

---

For use with glass doors and screen to prevent exposure to flame.

**Warning:**
- Do not use with glass doors.
- Use only indoors.

**Caution:**
- Do not use with glass doors.
- Use only indoors.

### Installation

1. **Fit**
   - Ensure the appliance is properly installed.
   - Use a level to check the installation.

2. **Care**
   - Regular maintenance is recommended.
   - Ensure all safety features are functioning correctly.

---

**Notice:**
- This label must be removed. Do not remove the rating plate sample.
Installation

Section 1: Installation Overview and Product Dimensions

Please review the Installation Checklist on Page 4 for general information on preparing for a successful installation of your fireplace. The L52DF* fireplace may be installed in any location that maintains proper clearances to air conditioning ducts, electrical wiring and plumbing. Safety, as well as efficiency of operation, should be considered when selecting the fireplace location. Try to select a location that does not interfere with room traffic, has adequate ventilation and offers an accessible path for Direct Vent installation.

The fireplace dimensions are shown below:

Figure 1: Unit Dimensions shown with nailing flange (Tolerance ± ¼").
Section 2: Framing
Frame in the enclosure for the unit with framing materials. The framed opening for the assembled fireplace is 52” wide, x 39½” high x 25¾” deep, see Figure 2.

NOTE: When constructing the framed opening, please ensure there is access to install the gas line when the unit is installed. See Figure 21.

* When sheetrock is not used behind the fireplace, framing depth may be reduced by 5/8”.

Figure 2. Framing dimensions.

Figure 3. Minimum Corner framing dimensions

Figure 4a. Framing for shelves over the fireplace, Top Vent (Combustible materials).

Figure 5. Non Combustible Framing for Top Vent or Rear Vent with Alcove Above Fireplace.

Figure 4. Framing for shelves over the fireplace, Rear Vent (Combustible materials).
Clearances To Combustibles

1” clearance is maintained on sides and bottom of vent runs and 2” above horizontal vent runs to any combustible material.

<table>
<thead>
<tr>
<th>MODEL</th>
<th>Top - Rear vent †</th>
<th>Top - Top vent †</th>
<th>Rear</th>
<th>Sides</th>
<th>Floor</th>
<th>Mantel</th>
</tr>
</thead>
<tbody>
<tr>
<td>L52DF*</td>
<td>10”</td>
<td>24”</td>
<td>3”</td>
<td>2”</td>
<td>0”</td>
<td>See Section 6 Finishing around the fireplace</td>
</tr>
</tbody>
</table>

† NOTE: Clearance from top of fireplace to ceiling within the fireplace enclosure.

When installing a shelf over the top of the fireplaces, the following guidelines must be adhered to:

Rear Vent applications, the minimum clearance is 3” from the rear of the fireplace to a wall, or any combustible materials, and 10” clearance from the top of the fireplace to the underside of any combustible shelf materials.

Top Vent applications, the minimum clearance is 3” from the rear of the fireplace to a wall, or any combustible materials, and 24” to the underside of any combustible shelf materials.

Installing The Standoffs

To avoid elevated mantel temperatures, all L52DF* gas fireplaces are required to have the supplied standoffs installed. The fireplace is supplied with two standoffs. Bend and install these standoffs on top of the fireplace ensuring that the height of the standoff maintains a 6” clearance.

Installing the Nailing Flange Extension

Once the fireplace is placed into the rough framed opening, the supplied Nailing Flange Extension (Part No. L52087) must be fasten securely into place, with nails or wood screws. as shown in Figure 7.

Figure 6. Installing the standoff's.

Figure 7. Installing the Nailing Flange Extension.

Note: The nailing flange extension can be substituted with a piece of NON-Combustible material of the same size and thermal characteristics, ie: cement board or equivalent. This is recommended in applications where the facing materials will not adhere to the metal nailing flange.
Framing the Heat Shield

Included with the L52DF* Gas fireplace, is a framing heat shield Kit. This Kit is fabricated from galvanized steel and arrives with three (3) pieces, as shown below. The shields protect all adjacent combustible materials, mantels and mouldings from excessive heat radiated by the fireplace.

NOTE: The shields must be installed as shown in Figures 8 - 8b.

Step 1. Fasten the two Side shield’s (L52FS01x2) first, and ensure they are fastened in place as shown. These are installed with the Wide flanges facing the center of the fireplace opening, and the shallow flange toward inside of room. These are also fastened with nails or screws, flush with framing as shown in Figure 8 and Inset.

Step 2. Next, fasten the Top shield (L52FS02x1), with the Wide flange face up, and the shallow flange toward inside of room, Figure 8a.

Step 3. Nail or screw the top shield in place flush with framing, as shown in figure 8b.
Section 3: Venting

Montigo supplies a variety of direct venting and termination options. The direct vent termination location MUST be selected such that it is the highest point in the venting assembly. It should also be selected such that it provides the shortest vent run possible. Should it be impossible to ensure that the termination is the highest point or should it be impossible to meet the venting guidelines laid out below please contact your Montigo dealer to discuss power venting options.

NOTES FOR PLANNING VENTING:

- Venting can originate from the unit through the top or through the rear.
- Venting can terminate through the roof or through an exterior wall.
- Refer to Appendix A - Termination Locations to ensure the planned termination location is acceptable.
- Once the termination location has been established, refer to the appropriate section for installation details.
- All fireplaces shipped from the factory are Top vent.
- Silicone application is NOT required when joining Montigo vent pipes and components.

Section 3-1: Converting To Rear Vent

Use the following instructions to convert an L52DF* for Rear Vent use:

1. Remove the Rear flue cover and gasket (5” and 8”) on the flue outlet, as shown in Figure 9.
2. Next, Remove the Top flue collar’s (5” and 8”) on the flue outlet, as shown in Figure 9.
3. Install the (removed) Rear flue cover and gasket material, to the Top vent outlet. Fasten the cover with included hardware, as illustrated Figure 9a.
4. Install the (5” and 8”) collars to the rear vent outlet using the included hardware, as illustrated Figure 9a.

Figure 9a. Flue cover and collar installation, Rear Vented fireplace.

Note: Images are shown without screens for clarity purposes. However, your fireplace should not be operated without proper installation of screens.

Figure 9. Flue cover and collar removal, Top Vented fireplace.
Section 3-2: Installing a Roof Mounted Direct Vent Termination (PVTK-1)
This section applies to installations where the direct vent termination will be roof mounted.

Section 3-2-1: Venting Layout
Selection of components and details of venting layout should adhere to the following guidelines:

- The maximum termination point is 32’ above the fireplace. (NOTE: if the maximum termination height is used, the flame pattern may be affected).
- The Vertical termination must be a minimum 2’ higher than where the termination exits the roofing materials, (asphalt shingles, cedar shakes, etc). This distance should be measured from the high side of the roof slope where the flue flashing intersects the roofing materials. (see Figures 10 - 10c).
- For a detailed diagram of allowed termination locations, see Appendix A.
- Termination location must be a minimum 6’ from a mechanical air inlet.
- A maximum of two offsets (each offset is made up of 2-90° bends) may be made for vertical vent runs.
- Firestops must be installed as required by National & local codes.
- Ensure all horizontal runs are supported with a minimum of 3 supports per 10’ of venting.
- Install all roof flashing and storm collars as shown.

Roof mounted Terminations
The following details are some possible configurations for Roof mounted terminations. See below.

Figure 10. Top vent, Roof mounted termination with no offset in vent run.

Figure 10a. Top vent, Roof mounted with 1 offset (1 offset= two 90° bends).

Figure 10b. Top vent, Roof mounted with 2 offsets (1 offset= two 90° bends).
Note: Images are shown without screens for clarity purposes. However, your fireplace should not be operated without proper installation of screens.

Figure 10c. Rear vent, Roof mounted venting (1 = 90° bend).
Section 3-3: Installing a Wall Mounted Direct Vent Termination

This section applies to installations where the direct vent termination will be wall mounted.

Installation of Termination with built in frame

A Termination with a Built-In Frame is installed during framing of a structure.
1. Frame the termination opening to 11" x 11".
2. Install exterior sheathing to the structure framing.
3. Fasten the termination to the sheathing using a minimum of 4 screws.

Figure 11 Installing a PTO4-F termination.

Installation of termination frame at time of framing

Terminations with a MSR frame allow the installation of the frame prior to installation of the termination.
1. Frame the termination opening to 12" x 12".
2. Secure the MSR Frame to the exterior sheathing of the structure.
3. Fasten the termination to the MSR Frame using a minimum of 4 screws.

Figure 11a. Installing a PTO termination with the MSR frame.

Installation of termination frame at time of framing in Masonry

Terminations with a BSR frame allow the installation of the frame in masonry prior to the installation of the termination.
1. Frame the BSR opening to 12" x 12".
2. Secure the BSR Frame to the exterior sheathing of the structure.
3. Fasten the termination to the BSR Frame using a minimum of 4 screws.

Figure 11b. Installing a PTO termination with the BSR frame.

Installation of termination from inside structure

A Termination with a MOSR Frame is installed from the inside of the structure. These are commonly used in high-rise construction.

Figure 11c. Installing a PTO termination with MOSR frame.

1. Frame the MOSR opening to 12" x 12".
2. Fasten the MOSR frame to the interior side of the studs, concrete, or finished wall construction using a minimum of 4 screws.
3. Insert the termination into the MOSR frame as shown here, (from the inside) and attach to the MOSR by installing a minimum quantity of 4 bolts into the threaded nuts on the MOSR Frame.

Installation of a termination shield for Vinyl Siding

The VSS Termination shield is installed when the exterior of a structure is clad with Vinyl siding. It is placed directly above, and on-center with the termination.

Figure 11d. Installing the VSS Vinyl Shield.

1. Ensure that the two long mounting brackets are facing the bottom of the termination. (See inset). This will provide more heat protection at the top of the termination, where temperatures are highest.
2. Attach to the faceplate of the termination using four sheet metal screws.
Section 3-3-1: Venting Layout: Wall mounted termination.
Selection of components and details of venting layout should adhere to the following guidelines:
- Vent terminations must not be recessed in walls or siding.
- For Heat Shield requirements see Section 3-3-3.
- Once the proposed venting layout has been determined refer to Figure 13 or 15 to ensure the layout is acceptable.

Notes Wall Mounted Terminations: TOP VENT
- All measurements for vertical or horizontal runs are measured from center of the vent pipe.
- Venting runs must fall within the limits set by the venting graph, see Figure 13.

Wall mounted Terminations
The following details are some possible configurations for Wall mounted terminations.

The Venting Graph: L52DF*
Measure the vertical height from the fireplace hearth to the centre of the termination and the horizontal run from the fireplace flue collar to the wall flange of the termination. Plot on the Venting Graph Figure 13 with an 'X'.
If the 'X' falls on or above the top boundary of the shaded area, the installation is acceptable.

Example A: (Acceptable Installation)
If the vertical dimension from the hearth is 108" and the horizontal run to the wall flange of the vent termination is 174", this would be an acceptable installation.

Example B: (Acceptable Installation)
If the vertical dimension from the hearth is 60" and the horizontal run to the wall flange of the vent termination is 72", this would be an acceptable installation.

Example C: (Unacceptable Installation)
If the vertical dimension from the floor of the fireplace is 60" and the horizontal run to the wall flange of the vent termination is 144", this would not be an acceptable installation.

Figure 13. L52DF* Top Vent Venting Graph for wall mounted terminations.

Figure 13a. Top Vented, wall mounted installation with one 90° bend. The vent run must comply with Venting Graph for Top vent, wall mounted terminations, Figure 13.

Figure 13b. Top Vented, wall mounted Multi-elbow installation. See Venting Graph for Top vent, wall mounted terminations, Figure 12.
Figure 13c. Top Vented, wall mounted Retracted Multi-elbow installation. See Venting Graph for Top vent, wall mounted terminations, Figure 13

Note: Images are shown without screens for clarity purposes. However, your fireplace should not be operated without proper installation of screens.
45° Corner Installation.
Attach an PEL-90 (90° elbow) directly onto the flue collar, and attach it to the PEL-45 (45° elbow). Cut the PXT-18 to suit and insert it into the PEL-45. Slide the fireplace into position, and then connect it to the exterior termination.

45° or less Corner Installation.
Use an PTO-3 termination and an PFL-1 or PFL-2/PFL-2 (12" or 24" compressed length) and a frame, if appropriate. Flex may be turned to obtain desired degree of angle required but must not exceed 45°.

Figure 14. Corner installation.
Figure 14a. Flex installation.

**WARNING**
Corner installation is available for L52DF® Top Vent Units Only. Ensure minimum vertical venting height of 40" is maintained in corner installations.
Installation

Notes Wall Mounted Terminations: REAR VENT

- All dimension lengths for vertical or horizontal runs are measured from center of the vent pipe.
- Venting runs must fall within the limits set by the venting graphs, see Figure 15.
- Fireplace must be converted to Rear Vent configuration prior to running vent, see Figure 9 and 9a.

The Venting Graph

Measure the vertical height from the fireplace hearth to the centre of the termination and the horizontal run from the fireplace flue collar to the wall flange of the termination. Plot on the Venting Graph Figure 15 with an 'X'. If the 'X' falls on or above the top boundary of the shaded area, the installation is acceptable.

**Example A:** (Acceptable Installation)

If the vertical dimension from the hearth is 102" and the horizontal run to the wall flange of the vent termination is 108", this would be an acceptable installation.

**Example B:** (Unacceptable Installation)

If the vertical dimension from the hearth is 42" and the horizontal run to the wall flange of the vent termination is 108", this would NOT be an acceptable installation.

**Example C:** (Unacceptable Installation)

If the vertical dimension from the floor of the fireplace is 60" and the horizontal run to the wall flange of the vent termination is 168", this would NOT be an acceptable installation.

![Figure 15a. Rear Vented, wall mounted Multi-elbow termination installation. Installation for L52DF* must have a minimum vertical rise of 52". The vent run must comply with the Venting Graph for Rear vent, wall mounted terminations, Figure 15.](image)
Section 3-3-2: Venting Components

The following components and associated Montigo part numbers for installation of a roof or wall mounted termination. Use only Montigo Vent Components. Use of non-Montigo parts will VOID the warranty and may impede operation of the fireplace.

Connection and installation of the vent components should adhere to the following guidelines:

- Use any combination of rigid and flex pipe as required and in any orientation (Male connectors can face in any direction).
- Flex sections may be stretched up to 50% of their total length (e.g. a 24” section maybe stretched to 36”).
- Connect all vent sections using a minimum of three sheet metal screws on the outer pipe flue.
- Ensure the pipe ends male to female slide in a minimum of 1 1/2” of overlap.
- Ensure all horizontal runs are supported with a minimum of 3 supports per 10’ of venting.
- When hanging/supporting venting, ensure that 1” clearance is maintained on sides and bottom of vent runs and 2” above horizontal vent runs to any combustible material.
- Rigid pipe may be cut less than half way from the female end only.
- Ensure when cutting sections of rigid pipe to maintain integrity of internal supports.
- Place the springs, supplied with the pipe kit, between the outer and inner pipes to keep the pipes separate and avoid any possible hot spots.
- Montigo recommends the use of a flex section for the final pipe connected directly to the fireplace offering greater flexibility of installation and absorption of movement.
- Firestops must be installed as required by National & local codes.
- Montigo recommends that all exterior corners and joints be sealed with exterior caulking. However, we encourage you to consult your Building Envelope Engineer or Waterproofing Consultant for further recommendations.

**IMPORTANT**

Please refer to your building envelope engineer or waterproofing consultant for a review of ALL penetrations through exterior walls or the roof.
Section 3-3-3: Heat Shields

Installing a Wall Mounted RHS8 Heat shield

The RHS8 Heat shield CANNOT be used WITHIN 36" horizontal or 60" vertically of the fireplace, (see figure 15a). For applications within these dimensions the RHS101 Heat Shield MUST be used. To install the RHS8, frame an opening in combustible construction, Figure 15 below. Slide the Heat shield in place over the vent pipe which attaches to the fireplace. After the fireplace and vent pipe has been installed, clearances should match the dimensions in Figure 15.

Installing a Wall Mounted RHS101 Heat shield.

The RHS101 Heat shield MUST be used where the RHS8 Termination (Figure 16 and 16a) CANNOT be used. Use the RHS101 where any of the dimensions are within the parameters shown, Figure 17a. To install the RHS101, Slide the Inner Section over the vent pipe that will connect to the fireplace. Then fasten the vent pipe to the back of the fireplace with a minimum of three sheet metal screws. From the outside slide the RHS101 outer section on see Figure 17. To complete the installation fasten the Heat Shield Outer Section & Termination frame to the structure Figure 17a.

Note: Images are shown without screens for clarity purposes. However, your fireplace should not be operated without proper installation of screens.
Section 4: Wiring

Figure 18. Wiring Diagram for the SIT Proflame 2 Electronic Ignition

Figure 19. Wiring Diagram for SIT Nova 820 gas and pilot.
**Installation**

**Installing the remote On/Off Wall Switch**
The L52DF* gas valve may be connected to a wall switch. Do NOT connect any external power to the remote switch. The valve will generate its own power on a millivolt circuit or will draw its power from an AC Connection inside the fireplace, depending on the model of the unit. Use only low voltage wire, and DO NOT connect any external power to the remote switch.

Refer to Figure 18 or 19 for wiring requirements.

**NOTE:**
The switch location must not exceed 30’ from the fireplace.

**NOTE:** If any of the original wire supplied with the appliance is replaced, it must be replaced with the same type, or its equivalent.

---

**CPI [Continuous Pilot Ignition] / IPI [Intermittent Pilot Ignition] Jumper Cable Installation (only available for SIT Electronic Ignition Systems)**

**“Why use CPI mode”?**
CPI means “Continuous Pilot Ignition” or “Standing Pilot” as it is commonly known. IPI means “Intermittent Pilot Ignition”, which only initializes the pilot when you are going to be using the appliance.

There are several reasons why you may choose to use CPI mode. When a flue is cold it can be difficult to light the appliance. It can take a bit of time (particularly on tall vents) to initialize vent action. This can result in “lifting” or “ghosting” of the flames during the first two to three minutes of operation. It is also possible to encounter times when the fireplace fails to light successfully. The fireplace will then attempt to re-light a second or third time depending on prevailing temperatures or altitude. When in CPI mode the pilot also keeps the system warm. During a “cold” start, condensation will normally form on the inner glass surface of the door. This condensation will quickly dry, however, the condensation tends to run down the glass and cause some streaking. CPI mode helps to resolve this issue. If CPI mode is used during the winter months the energy it takes to run the pilot is partially recovered as heat into the building, so it does not waste as much energy as running a pilot in the off season.

**If you use a wall switch:**
A connector is supplied with this unit that can be plugged into the wire harness connected to the controller. When the CPI jumper is connected, the pilot will light and remain lit continuously. Use the wall switch to turn the main burner on or off. To switch back to IPI mode you must unplug the CPI jumper.

**If you use the optional remote:**
A connector is supplied with this unit that can be plugged into the wire harness connected to the controller. This Jumper Cable gives the Remote Control the ability to operate the CPI / IPI switch and set the unit to operate in either condition.

---

**The difference between IPI and CPI:**

**IPI (Intermittent Pilot Ignition) Mode:** is a fuel saving mode in which the pilot is only used when the main burner is on.

**CPI (Continuous Pilot Ignition) Mode:** The Pilot runs continuously even when the main burner is off.

---

**Installing the CPI Jumper Cable**

1. Remove the door and valve blind.

2. Remove the bag containing the Jumper Cable from the wire harness connected to the controller as shown in Figure 20.

3. Find the corresponding plug attached to the control wire harness and connect the CPI jumper.

4. See operation section to turn remote into CPI mode.
Section 5: Installing the Gas Line

Section 5-1: FUEL CONVERSION
Verify that your fireplace is compatible with your available gas type. (Natural Gas or Propane shown by "N" or "L" in your model number. If gas type is not compatible, contact your local Montigo representative. Conversion kits must be installed by a qualified service technician.

Section 5-2: GAS PRESSURE
Optimum appliance performance requires proper input pressures. Gas line sizing requirements will be determined in ANSI Z223.1 National Fuel Gas Code in the USA and CAN/CGA B149 in Canada.

<table>
<thead>
<tr>
<th>Gas Pressure</th>
<th>Natural Gas</th>
<th>Propane</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum inlet pressure</td>
<td>5.5in. w.c.</td>
<td>11in. w.c.</td>
</tr>
<tr>
<td>Manifold pressure</td>
<td>3.5in. w.c.</td>
<td>10in. w.c.</td>
</tr>
</tbody>
</table>

The manifold outlet pressure is set from the factory to the appropriate pressure but should be verified. To check pressures, control valves have a provision to remove a 1/8” N.PT. plug to be fitted with a hose barb.
Montigo requires a service shut-off valve be located in an accessible location to isolate the gas supply. Only install gas shut-off valves approved for use by the state, province, or other governing body in which the fireplace is being installed.

Section 5-3: GAS CONNECTION
See Figure 21 for location of gas line access. Flexible gas connectors must not exceed 3 feet in length, unless allowable within local regulations. Connect incoming gas line to the 1/2” or 3/8” gas inlet port.
Purge all air out of gas line.
Check appliance connection, valve and valve train under normal operating pressure with a commercially available leak check solution.
DO NOT USE A FLAME OF ANY KIND TO TEST FOR LEAKS.
Section 6: Finishing

Finishing Around the Fireplace
Combustible mantels and mouldings may be safely installed over the top and on the front of the fireplace provided that they do not project beyond shaded area shown in Figure 22.

Fireplace Facing
When sizing the finish material for your fireplace, it is important to remember the following: THE OPENING MUST NOT BE OBSTRUCTED IN ANY WAY - to do so restricts the air supply for the control compartments and heat exchanger it also prevents access for servicing controls.

The face of the fireplace may be painted to match the room decor, provided you use a heat-resistant paint. Decorative facing must not extend past the fireplace opening at all, because it will interfere with the access to retainers for removal of glass door.

Mantels & Surrounds
NOTE: National Canadian Gas Association mantel test requirements are for fire hazard prevention to combustible materials.

New technology, to meet consumer and government demands for the wise use of energy, has prompted us to manufacture many models of fireplaces which are hot, fuel and energy efficient.

Please be aware; temperatures over the mantel will rise above normal room temperature and walls above fireplace may be hot to touch.

Side wall clearances are 3". Combustible surrounds may be installed with 3" clearance to the side of the fireplace as shown in Figure 23.

IMPORTANT
When covering the upper metal portion of the fireplace, up to 6" (as shown in Figure 22) with a non-combustible material. Please note the decorative facing materials may be subject to temperatures in excess of 250°F. This should be considered when selecting facing materials.

WARNING
Do not place any materials or objects on top of the valve blind. Doing so could result in failure of door relief system or heat dissipation.

Figure 22. Combustible mantels and facings.

Figure 23. Combustible surrounds.
Section 7: Screen Installation and Removal

Removing / Attaching Screens:

To Remove Screens:

Grasp each top outer corner of the screen with your thumb and finger and pull towards yourself. When the upper Screen Studs are free, lift the screen at an angle from the lower slots from which the Screen Bottom Tabs are held. Place the screen in a safe place.

To Install Screens:

Hold the screens at an angle away from the fireplace, and locate the Screen Bottom Tabs at the lower corners of the screen. Place the screen into the Screen Tab Receptacles in the lower section of the fireplace.

Make sure the tabs and screens are lowered all the way down into the Screen Tab Receptacles on the fireplace. Then, push each Upper Screen Stud on the top corners of the screen into the Upper Screen Stud Receptacles in the fireplace.

Figure 25b. Screen Installation and Removal

Replacement Screens:

For replacement part order numbers, please refer to section "Replacement Parts:" on page 36.

Note: Do not operate fireplace without all screens in place.
Section 8: Installing & Removing the Door

Removing the door:
The L52DF doors are removed in a few simple steps. Follow these instructions below to remove the Horizontal access panel, unlatch the door buckles and, remove the door. Replace in reverse order.

**WARNING**

When reinstalling door(s), always make sure all door buckles are properly hooked and fully engaged.

**Step 1:** Remove the Horizontal Access Panel:
- Remove the Horizontal cover by placing fingers in both finger holes, then pushing away from you and lifting out. Place it aside during maintenance or cleaning.
- Install in reverse order.

**Step 2:** Locate the Door Buckles.

**Step 3:** Locate Door Buckle Tool.

**Step 4:**
- Firmly grasp hand-hold end of Door buckle tool and place the machined end in the slot under door frame. (as shown)

**Step 5:**
- Ensure the tool is firmly in the lower end of the slot, (as shown), Then pull toward you (Caution: hold the tool securely).

**Step 6:**
- Pull hard if necessary to release the spring tension. (Caution: The latch springs back with force, hold the tool securely).

**Step 7:**
- Remove the tool from the latch slot. Ensure the latches are hanging freely, the hook end is released from the bottom of the door. (Repeat all 4-steps for the remaining latches).

Figure 24a. Locate the door buckles.
Figure 24b. Door buckle Tool
Figure 24c.
Figure 24d.
Figure 24e.
Figure 24f.
Section 9: Installing the Accessories

Optional River Rocks
The L52DF fireplace has the option of installing the cultured rocks or firestones. As described below, CAUTION, the firestones or cultured rocks cannot cover the burners. Doing so produces an undesirable / uneven flame pattern, and eventual sooting. Install as shown, Figure 25 to 25a.

Installing the Firestones:
L52DF* Fireplaces, has the option of installing the optional cultured rocks or firestones. As described below, CAUTION, the firestones or cultured rocks cannot cover the burners. Doing so produces an undesirable / uneven flame pattern, and eventual sooting. Install as shown, Figure 25 to 25a.

CAUTION!
DO NOT COVER THE BURNERS with firestones or river rocks.

Note: CAUTION: Ensure the optional river rocks or designer firestones do not cover the Burners.

Figure 25. Completed firestone installation. (Note: DO NOT place ANY firestones on top of the burners).

Figure 25a. Operating gas fireplace with firestones surrounding burner tray.

Optional River Rocks
The L52DF fireplace has the option of installing the cultured rocks which mimic real stone. These may be spaced at random, or in a visual pattern of your preference. See the Montigo web site for photographs and ideas.

www.montigo.com

Step 8: Removing the Door:
Grasp the Door on either side, usually midway and lift upward, lift the door carefully up and away from the front of the fireplace. See Figures 24g. Place the Door aside in a safe place while maintenance and / or cleaning is being performed.

Figure 24g. Removing and installing the glass doors.

Installing the Door:
To install the door, hook the top edge of the door frame into place. Lower the door into position and follow the previous steps shown in reverse order.

WARNING
When installing the fireplace - gas lines, fittings, accessories or any other objects cannot impede the proper movement of the door buckles.
Section 10: Start-up Sequence

For Your Safety - READ BEFORE LIGHTING:

A. This appliance is equipped with an ignition system that lights the pilot burner automatically. Do not attempt to light the pilot by hand.
B. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

What To Do If You Smell Gas:
- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the Fire Department.

C. Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don't try to repair it, call a qualified service technician. Force or attempt to repair may result in a fire or explosion.
D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system, and any gas control which has been under water.

Standing (Continuous) Pilot Ignition (SIT NOVA 820)

Lighting Instructions:

1. STOP! Read the safety information above on this label.
2. Lift out the lower Horizontal access panel.
3. Push in gas control knob and turn clockwise to "OFF."
4. Wait five (5) minutes to clear out any gas. Smell for gas, including near the floor. If you then smell gas, STOP! Follow "B" in the safety information above on this label. If you don't smell gas, go to the next step.
5. Locate pilot burner (See illustration at right.) and follow steps below.
6. Turn knob on gas control counter-clockwise to "PILOT."
7. Push in gas control knob completely and hold. Light with Piezo Igniter button. Continue to hold the control knob in for about (1) minute after the pilot is lit. Release the knob and it will pop back up. Pilot should remain lit. If it goes out repeat steps 3 through 8.
   - If knob does not pop up when released. Stop and immediately call your service technician or gas supplier.
   - If the pilot will not stay lit after several tries, turn the gas control knob to "OFF" and call your service technician or gas supplier.
8. Push in gas control knob and turn counter-clockwise to "ON."
9. Replace the lower Horizontal access panel.
10. Turn on remote switch to ignite fire.

To Turn Off Gas To Appliance:

1. Turn off remote switch.
2. Lift out the lower Horizontal access panel.
3. Push in gas control knob slightly and turn clockwise to "OFF". Do not force.
4. Replace the lower Horizontal access panel.

A WARNING/ CAUTION: Hot while in operation. Do not touch. Severe burns may result. Keep children, clothing, furniture, gasoline and other liquids having flammable vapours away. See installation and operating instructions accompanying this appliance.

A WARNING: If the information in these instructions is not followed exactly, a fire or explosion may result causing property damage, personal injury or death.

NOTE: Gas control knob cannot be turned from "PILOT" to "OFF" unless knob is pushed in slightly. Do not force.

Gas Control Knob
(Shown in "Pilot" position.)
**Operation**

**SIT Proflame 2 Electronic Ignition**

**Lighting Instructions:**

1. STOP! Read the safety information above on this label.
2. Remove the lower Horizontal access panel.
3. Turn "ON" manual "ON/OFF" switch located below the horizontal access panel (if available).
4. Turn Incoming gas valve to the ON” position.
5. Wait 5 minutes to clear out any gas. If you smell gas, STOP! Follow "B" in the safety information above on this label. If you don’t smell gas, go to the next step.
6. Turn fireplace "ON" using wall switch or remote control.
7. If the Fireplace does not light, the System will cycle through two trials, (one minute audible clicking, thirty seconds of silence, and then another one minute of audible clicking). If the system locks out due to inadequate gas flow, refer to "Troubleshooting" in instruction guide.
8. After completion of the information in the Troubleshooting section, Repeat step 5.
9. If the system will not function correctly, follow the instructions “To Turn Off Gas To Appliance” and call your service technician or gas supplier.

**To Turn Off Gas To Appliance:**

1. Turn off fireplace using wall switch or remote control.
2. Remove the lower Horizontal access panel.
3. Turn the incoming gas control valve to "Off".
4. Replace the lower Horizontal access panel.
Optional Remote Operation

The Proflame 2 System consists of the following elements:
1. Pilot Assembly
2. Proflame Gas Valve.
3. Proflame 2 Control Module
4. Wiring Harness
5. Variable Speed fans
6. Variable Accent Lights
7. Proflame 2 remote control
8. Battery Pack
9. Manual override switch

NOTE: Can not be used with home automation systems.

The Proflame 2 Transmitter controls the following fireplace functions:
1. Main Burner On/Off
2. Main Burner flame modulation (6 levels).
3. Choice of standing or intermittent pilot (CPI/IPI).
4. Thermostat and Smart thermostat functions.
5. Variable Accent light (6 Levels).
6. Fan speed modulation (6 levels).

The Proflame 2 Transmitter uses a streamlined design with a simple button layout and informative LCD display. A Mode Key is provided to index between the features and a Thermostat Key is used to turn On/Off or index through Thermostat functions, see Figure 26. Additionally, a Key Lock feature is provided.

WARNING
Do not expose remote control to temperatures below 0°C (32°F) or above 50°C (122°F)

CAUTION
Property Damage Hazard. Excessive heat can cause property damage. The appliance can stay lit for many hours. Turn off the appliance if it is not going to be attended for any length of time.

Figure 26.

Figure 26a. Proflame 2 Control Module

Figure 26b. Remote Control LCD Display
Operation

Initializing the System for the first time
1. Set master override switch to off position.
2. Install four (4) AA batteries into the battery holder.
3. Install three (3) AAA batteries in the back of the remote control.
   Note the polarity of batteries and install them as indicated by the silk screen (+/-) on the holder.
4. Connect AC Power (115 volts, 60 Hz) to fireplace.

Operating the System for the first time
5. Press SW1 button on the control module. The control module will beep three (3) times and an amber LED is illuminated to indicate that the IFC is ready to synchronize with a remote control within 10 sec. Push the ON button. The control module will "beep" four (4) times to indicate transmitter's command is accepted.
   The System is now initialized.

Temperature indication Display
With the system in the "Off" position, press the Thermostat Key and the Mode Key at the same time. Look at the LCD screen on the Remote Control to verify that a C or F is visible to the right of the Room Temperature display.

WARNING
Battery operated device. Read the battery instructions before installing them into the system. Do not expose any battery, or its holder, or a device in which batteries are installed, to a working temperature greater than 54°C / 129°F.

Turn On the Fireplace
With the system Off, turn the master override switch to on and press the On/Off Key on the Remote Control. The Remote Control display will show some other active Icons on the screen. At the same time the Control Module will activate the fireplace. A single "beep" from the Control Module will confirm reception of the command.

Turn Off the Fireplace
With the system On, press the On/Off Key on the Remote Control. The Remote Control LCD display will only show the room temperature. At the same time the Control Module will turn off the fireplace. A single "beep" from the Receiver confirms reception of the command.

---

Figure 26c. Remote Control Battery Compartment
Figure 26d. Remote Control display in Fahrenheit & Celsius
Figure 26e. Remote Control Display
Remote-Flame Control

When you turn on the fireplace it starts on high. The profile flame 2 has six (6) flame levels. Each time you press the Down Arrow Key once the flame height will reduce by one step.

You can continue this until the main burner flame turns off. You can still operate the accent lights and fans in this mode.

If the main burner flame is off and you press the up arrow key once, the flame will automatically go to high.

Room Thermostat (Remote Control Operation)

The Remote Control can operate as a room thermostat. The thermostat can be set to a desired temperature to control the comfort level in a room. To activate the function, press the Thermostat Key, see Figure 26h. The LCD display on the remote control will change to show that the room thermostat is "On" and the set temperature is now displayed. To adjust the set temperature press the Up or Down Arrow Keys until the desired set temperature is displayed on the LCD screen of the Transmitter.

NOTE: When smart Thermostat is activated, manual flame height adjustment is disabled.
Disabling Thermostat

Some jurisdictions and bedroom installations require the thermostat to be disabled.

1. Partially take out one battery, see Figure 26j.
2. Insert the battery while holding down the thermostat button. The remote screen will display 'Clr' while the button is held down. See Figure 26k.
3. To enable thermostat repeat steps 1-2. The remote screen will display 'set' while the thermostat button is held down.

Fan Speed Control

The fireplace is equipped with optional hot air circulating fans. The speed of the fans can be controlled by the Proflame system. The fan speed can be adjusted through six (6) speeds. To activate this function use the Mode Key, see Figure 26, to index to the fan control icon, see Figure 26l. Use the Up/Down Arrow Keys to turn on, off, or adjust the fan speed. A single "beep" will confirm reception of the command.

Accent Light Control

If the fireplace is equipped with variable accent lights. The accent light function controls the Accent Lights. To activate this function use the Mode Key, see Figure 26, to index to the accent light icon, see Figure 26m.

Pressing the Up Arrow Key will turn the light on at the lowest setting. Continue pressing up to get brighter. Pressing the Down Arrow Key will turn the lights down until you get to the off position. A single beep will confirm the reception of the command.

![Figure 26j.](image1)
![Figure 26k.](image2)
![Figure 26l. Fan Speed Control](image3)
![Figure 26m. Light Control](image4)
Continuous Pilot (CPI) Selection (Optional)

In cold weather climates, the pilot burner can stay on continuously to prevent condensation or cold air temperatures near the fireplace glass. Note, some jurisdictions do not permit use of continuous pilot system. Check local codes or contact your Montigo dealer.

With the system in "off" position press the Mode Key, see Figure 26, to index to the CPI mode icon, see Figure 26n. Pressing the Up Arrow Key will activate the Continuous Pilot Ignition mode (CPI). Pressing the Down Arrow Key will return to IPI. A single "beep" will confirm the reception of the command.

NOTE:
- Requires CPI/IPI jumper cable installed, see page 21.

Low Battery Power Detection

The life span of the batteries depends on various factors: quality of the batteries used, the number of ignitions of the appliance, the number of changes to the room thermostat set point, etc.

Remote Control

When the Remote Control batteries are low, a Battery Icon will appear on the LCD display of the Remote Control, see Figure 26p. Before all battery power is lost, When the batteries are replaced, this icon will disappear.

Control Module

When the back-up batteries are low, a "double-beep" will be emitted from the IFC when it receives an On/Off command from the Remote Control. This is an alert for a low battery condition of the receiver and after that no more commands will be accepted. When the batteries are replaced, the "beep" will be emitted from the receiver as soon as powered.

Key Lock

This function will lock the keys to avoid unsupervised operation. To activate this function, press the Mode and Up Keys at the same time, see Figure 26o. To de-activate this function, press the Mode and Up Keys at the same time.
Maintenance

Lighting Instructions See pages 27 to 28.

General
Have the fireplace and installation inspected yearly.
The inspection must include, but is not limited to, the following:
- A visual check of the entire vent system and termination.
- An inspection of the explosion relief flappers and the door gaskets to ensure a proper seal.
- An inspection of the burner, vent run, and primary air openings.
- An inspection of the gas valve, gas components, and pilot flame. For your convenience a 1/8” manifold pressure tap is supplied on the gas valve for a test gauge connection.
- Inspection of all optional equipment; fans, thermostats, etc.
  ■ For Natural Gas this appliance requires a minimum inlet pressure of 5.5” W.C. and a manifold pressure of 3.5” W.C.
  ■ For Propane Gas this appliance requires a minimum inlet pressure of 11” W.C. and a manifold pressure of 10” W.C.
  ■ Always keep the fireplace area clear and free of combustible materials, as well as gasoline and other flammable vapors and liquids.
  ■ Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.
  ■ Inspection of glass doors and screen for damage and proper installation.

Cleaning
When the fireplace is first activated, there may be some smoke and a visible film may be left on the glass. This is a normal condition, and is the result of burning of protective coatings on new metal.
  ■ Glass must be cleaned periodically to remove any film (which is a normal by-product of combustion) which may be visible. Film can easily be removed by removing the door, as shown on Page 25. Handle the door carefully, and clean it with non-abrasive glass cleaners. One of the most effective products is Kel Kem.
  ■ Silicone seals on inner door during initial firing will “off gas”, leaving a visual deposit of a white substance on combustion chamber walls. This can easily be removed from the chamber walls using normal household products.
  ■ Use a vacuum cleaner or whisk broom to keep the control compartment, burner, and firebox free from dust and lint.

Hi-Lo Burner Adjustment: (SIT Nova 820).
The L52DF* is equipped with an adjustable burner, allowing you to raise or lower the flames. To adjust the flames, locate the black knob marked ‘Hi-Lo’, in the centre of the gas control valve (See Figure 27).
  ■ To raise the flame height, turn the black knob (located behind the lower control compartment) counter-clockwise.
  ■ To lower the flame height, turn clockwise.

Hi-Lo Burner Adjustment: (SIT Proflame 2).
The L52DF* is equipped with an adjustable burner, allowing you to raise or lower the flames. To adjust the flames, locate the black knob marked ‘Hi-Lo’, in the centre of the gas control valve (See Figure 28).
  ■ To raise the flame height, turn the black knob (located behind the lower control compartment) counter-clockwise.
  ■ To lower the flame height, turn clockwise.

Pilot Burner Adjustment.
1. Locate Pilot Adjustment Screw. (See figure 27 or 28.)
2. Adjust pilot screw to provide properly sized flame as shown.
3. After installing or servicing, leak test with a soap solution with main burner on. Coat pipe and tubing joints, gasket etc. with soap solution. Bubbles indicate leaks. Tighten any areas where the bubbles appear until the bubbling stops completely.
Troubleshooting

*SIT Nova 820:*

The following is a troubleshooting chart of possible problems:

<table>
<thead>
<tr>
<th>PROBLEM</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Noisy Pilot Flame</td>
<td>Locate pilot adjustment screw on gas control valve. Flame is decreased by turning adjustment screw clockwise.</td>
</tr>
<tr>
<td>Pilot won’t ignite</td>
<td>Disconnect remote wires and try to light pilot. If pilot now works, remote connections are faulty. Check wiring diagram figure 27.</td>
</tr>
<tr>
<td>Main burner will not ignite</td>
<td>1. Check wiring (see figure 27). 2. Check wall switch for proper connection.</td>
</tr>
</tbody>
</table>

If your fireplace still does not operate correctly, consult your local Montigo dealer.

All service and repairs should be performed by a qualified Technician.
All spare parts, optional fans, and optional trim finishes are available from your local Montigo dealer.

*SIT Proflame 2:*

The following is a troubleshooting chart of possible problems:

<table>
<thead>
<tr>
<th>PROBLEM</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pilot Igniter won’t spark</td>
<td>1. Check the MAIN ON-OFF switch (typically located below the valve cover) and turn ON</td>
</tr>
<tr>
<td></td>
<td>2. Ensure main power is ON or new batteries are installed in the remote control and backup battery pack (if available).</td>
</tr>
<tr>
<td></td>
<td>3. Check the 3.15A fuse in the control box and replace if necessary</td>
</tr>
<tr>
<td>Pilot Igniter sparking, but Pilot burner will not light</td>
<td>1. Verify the Inlet and Manifold Gas Pressure are within acceptable limits</td>
</tr>
<tr>
<td></td>
<td>2. Check all connections to gas valve</td>
</tr>
<tr>
<td></td>
<td>3. Check connection to stepper motor (if available)</td>
</tr>
<tr>
<td>Pilot lights , but Main burner will not Light</td>
<td>1. Check and verify all wiring connections as per the wiring diagram.</td>
</tr>
<tr>
<td></td>
<td>2. Verify the inlet and Manifold Pressure are within acceptable limits</td>
</tr>
<tr>
<td>Pilot lights , but Main burner will not Light and igniter continues to spark</td>
<td>1. Check the Pilot Flame Sensor Rod and clean with steel wool or similar.</td>
</tr>
<tr>
<td></td>
<td>2. Check the Pilot hood and clean with steel wool if dirty.</td>
</tr>
<tr>
<td></td>
<td>3. Adjust pilot flame using the pilot adjustment screw if the pilot flame is too long or too short (Flame should fully engulf the sensor rod and must be stable).</td>
</tr>
<tr>
<td></td>
<td>4. Check and make sure the ground wire from the pilot is connected to the fireplace body.</td>
</tr>
<tr>
<td>Fans not working</td>
<td>1. Ensure main power is ON (fireplace may be operating on back up batteries).</td>
</tr>
<tr>
<td></td>
<td>2. Check the 3.15A fuse in the control box and replace if necessary</td>
</tr>
</tbody>
</table>

Note 1: For N a vent shall not terminate directly above the sidewalk or paved driveway which is located between two single family dwellings and serve both dwelling.

Note 2: For P only permitted if veranda, porch, deck, or balcony is fully open on a minimum of two sides beneath the floor

Note 3: For J, K, and as specified in CGA B149 installation code. Local codes or regulations may vary.

* Based on CGA B149.1 Natural Gas and Propane installation code. Local codes may vary, please check with local regulatory agency.

** Based on ANSI Z223.1/NFPA 54 National Fuel Gas Code. Local codes may vary, please check with local regulatory agency.
Appendix B: Warranty

The Warranty

The Companies warrants the Montigo Gas Appliance to be free from defects in materials and workmanship at the time of manufacture. On the Montigo, there is a ten-year warranty on the firebox and its components, a five-year warranty on the main burner and pilot burner, and a one-year warranty on the gas control valve and fibre logs. Glass, plated/painted finishes, and refractory lining are exempt.

Remedy And Exclusions

The coverage of this Warranty is limited to all components of the Gas Appliance manufactured by The Companies. This Warranty only covers Montigo Gas Appliances installed in the United States or Canada.

If the components of the Gas Appliance covered by this Warranty are found to be defective within the time frame stated (see The Companies right of investigation outlined below), The Companies will, at its option, replace or repair defective components of the Gas Appliance manufactured by The Companies at no charge, and will also pay for reasonable labour costs incurred in replacing or repairing components. If repair or replacement is not commercially practical, The Companies will, at its option, refund the purchase price of the Montigo Gas Appliance.

This Warranty covers only parts and labour as provided above. In no case shall The Companies be responsible for materials, components, or construction which are not manufactured or supplied by The Companies, or for the labour necessary to install, repair or remove such materials, components or construction. All replacement or repair components will be shipped F.O.B. the nearest The Companies factory.

Qualifications To The Warranty

The Gas Appliance Warranty outlined above is further subject to the following qualifications:

(1) The Gas Appliance must be installed in accordance with The Companies installation instructions and local building codes. The Warranty on this Montigo Gas Appliance covers only the component parts manufactured by The Companies. The use of components manufactured by others with this Montigo Gas Appliance could create serious safety hazards, may result in the denial of certification by recognized national safety agencies, and could be in violation of local building codes. This warranty does not cover any damages occurring from the use of any components not manufactured or supplied by The Companies.

(2) The Montigo Gas Appliance must be subjected to normal use. The Gas Appliances are designed to burn gas only. Burning conventional fireplace fuels such as wood, coal or any other solid fuel will cause damage to the Gas Appliance, will produce excessive temperatures and will result in a fire hazard.

Limitations On Liability

It is expressly agreed and understood that The Companies sole obligation, and purchaser's exclusive remedy under this Warranty, under any other warranty, expressed or implied, or in contract, tort or otherwise, shall be limited to replacement, repair, or refund, as specified above.

In no event shall The Companies be responsible for any incidental or consequential damages caused by defects in its products, whether such damage occurs or is discovered before or after replacement or repair, and whether or not such damage is caused by The Companies negligence. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you. The duration of any implied warranty with respect to this Montigo Gas Appliance is limited to the duration of the foregoing warranty. Some states do not allow limitation on how long an implied warranty lasts, so the above may not apply to you.

Investigation Of Claims Against Warranty

The Companies reserves the right to investigate any and all claims against this Warranty and to decide upon method of settlement.

The Companies Are Not Responsible For Work Done Without Written Consent

The Companies shall in no event be responsible for any warranty work done without first obtaining The Companies written consent.

Dealers Have No Authority To Alter This Warranty

The Companies employees and dealers have no authority to make any warranties nor to authorize any remedies in addition to or inconsistent with those stated above.

How To Register A Claim Against Warranty

In order for any claim under this Warranty to be valid, The Companies must be notified of the claimed defect in writing or by telephone, as soon as reasonably possible after the defect is discovered. Claims against this Warranty in writing should include the date of installation, and a description of the defect.

Other Rights

This Warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

NOTE: The Companies as stated above refer to - Canadian Heating Products Inc. and/or Montigo Del Ray Corp.

Canadian Heating Products Inc. and/or Montigo DelRay Corp. reserves the right to make changes at any time, without notice, in design, materials, specifications, prices and also to discontinue colors, styles and products.
Above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

(a) For all side wall horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than seven (7) feet above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

1. INSTALLATION OF CARBON MONOXIDE DETECTORS. At the time of installation of the side wall horizontal vented gas fueled equipment, the installing plumber or gas fitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gas fitter shall observe that a battery operated or hard wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors.
   a. In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or an attic, the hard wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level.
   b. In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

2. APPROVED CARBON MONOXIDE DETECTORS. Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2034 listed and IAS certified.

3. SIGNAGE. A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2) inch in size, "GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS".

4. INSPECTION. The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.08(2)(a)1 through 4.

(b) EXEMPTIONS: The following equipment is exempt from 248 CMR 5.08(2)(a)1 through 4:
   1. The equipment listed in Chapter 10 entitled "Equipment Not Required To Be Vented" in the most current edition of NFPA 54 as adopted by the Board; and
   2. Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

(c) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM PROVIDED. When the manufacturer of Product Approved side wall horizontally vented gas equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:
   1. Detailed instructions for the installation of the venting system design or the venting system components; and
   2. A complete parts list for the venting system design or venting system.

(d) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM NOT PROVIDED. When the manufacturer of a Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for venting the flue gases, but identifies "special venting systems", the following requirements shall be satisfied by the manufacturer:
   1. The referenced “special venting system” instructions shall be included with the appliance or equipment installation instructions; and
   2. The “special venting systems” shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

(e) A copy of all installation instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.

(3) After NFPA-54 section 10.10.4.2 add a new section 10.10.4.3 as follows:

When more than four gas appliances are to be vented through a common gas vent or common horizontal vent manifold, a plan of the proposed vent installation shall be submitted to the Inspector and the serving gas supplier for review and approval.
