Finishing Around a Montigo Fireplace
The following pages provide finishing options for your Montigo fireplace without the COOL-Pack or Power COOL-Pack option.

Finishing with a NON-Combustible Material
If the finish for the fireplace will be of a non-combustible material, such as stone or tile, please refer to Figure 2.

Finishing With a Combustible Material
If the finish for the fireplace will be of a combustible material such as wood laminate, please refer to Figure 3.

FIGURE 1: Typical Montigo Fireplace Cross Section.
See following figures for enlarged finishing detail of “A”

FIGURE 2: Detail of A - Finishing with Non-Combustible

FIGURE 3: Detail of A - Finishing with Combustible
Finishing with a Painted Finish
If the finish for the fireplace will be a painted finish, please refer to Figure 4.

A Note on Mantels & Surrounds
National Canadian Gas Association mantel test requirements are for fire hazard prevention to combustible materials.

New technology, to meet consumer and government demands for the wise use of energy, has prompted us to manufacture many models of fireplaces which are hot, fuel and energy efficient.

Please be aware; temperatures over the mantel will rise above normal room temperature and walls above the fireplace may be hot to touch.

We recommend careful consideration be given to the effects of elevated mantel temperatures which may be in excess of product design, for example: candles, plastic, or pictures. This elevated heat can cause melting, deformation, discoloration or premature failure of a TV and radio components.

Walls perpendicular to the fireplace opening must not be closer than shown in Figure 6:

Finishing: Mantels and Surrounds
Combustible mantels may safely be installed over the fireplace provided that they do not project beyond the shaded area shown in Figure 5:
