WARNING

Do not store or use gasoline or any other flammable vapors and liquids in the vicinity of this or any other gas burning appliance. A fire or explosion may occur causing serious injury, property damage or even death.

NOTICE

Installer: Leave this manual with the appliance. Do not remove.

NOTICE

This fireplace is certified to ANSI Z21.50 / CSA 2.22 Vented Fireplace Standard as a power assisted direct vent fireplace. This product uses outdoor air for combustion and exhausts combustion products outdoors.

DANGER

Some materials used in the manufacturing process of this product can expose you to Benzene which is known in the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov

DANGER

HOT GLASS WILL CAUSE BURNS.
DO NOT TOUCH GLASS UNTIL COOLED.
NEVER ALLOW CHILDREN TO TOUCH GLASS.

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and must be installed for the protection of children and other at-risk individuals.
You must read and understand this manual prior to installation, operation or troubleshooting this appliance. Please retain this owner’s manual for future reference and maintenance.

**Introduction**

Congratulations on your purchase of a Montigo Fireplace.

With over 30 years of experience, Montigo is committed to providing you with a gas fireplace that is not only a beautiful addition to your space, but that is also designed and manufactured to the highest safety, reliability and engineering standards.

We strongly encourage you to read and carefully follow the instructions laid out in this Installation, Operation and Maintenance Manual and retain it for your future reference. Pay special attention to all cautions, warnings, and notices throughout this manual intended to ensure your safety.

This manual covers installation, operation and maintenance. Lighting, operation and care of this fireplace can be easily performed by the homeowner. All installation and service work should be performed by a qualified or licensed installer, plumber or gas fitter as certified by the state, province, region or governing body where the fireplace is being installed.

This installation, operation and maintenance manual is applicable to the models described below. Refer to your rating plate to verify included options.

---

**Warranty and Installation Information: (See Appendix B)**

The Montigo warranty will be voided by, and Montigo disclaims any responsibility for, the following actions:

- Modification of the fireplace and/or components including Direct-Vent assembly or glass doors.
- Use of any component part not manufactured or approved by Montigo in combination with this Montigo fireplace system.
- Installation other than as instructed in this manual.

Consult your local Gas Inspection Branch on installation requirements for factory-built gas fireplaces. Installation & repairs should be done by a qualified contractor.

---

**Safety Alert Key**

**DANGER**

Indicates a hazardous situation which, if not avoided, WILL result in death or serious injury or property damage.

**WARNING**

Indicates a hazardous situation which, if not avoided, COULD result in death or serious injury or property damage.

**CAUTION**

Indicates a hazardous situation which, if not avoided, WILL result in minor or moderate injury.

**NOTICE**

Address practices that are important, but not related to personal injury.

---

**CAUTION**

Young children should be carefully supervised when they are in the same room as the appliance. Toddlers, young children and others may be susceptible to accidental contact burns. A physical barrier is recommended if there are at risk individuals in the house. To restrict access to a fireplace or stove, install an adjustable safety gate to keep toddlers, young children and other at risk individuals out of the room and away from hot surfaces.
Installation

Section A: Before You Start

Important Message
Save these Instructions

The H36PV Power Vent fireplaces must be installed in accordance with these Instructions. Carefully read all the Instructions in this manual first. Consult the Local Gas Branch to determine the need for a permit prior to starting the installation. It is the responsibility of the installer to ensure this fireplace is installed in compliance with the manufacturers instructions and all applicable codes.

BEFORE YOU START:

Pre-Installation Checklist

- Determine the desired install location of your fireplace.
- See Section 1, Dimensions on Page 5, and refer to the Framing Section 2 for details.
- Select your type and location of your Power Vent run: Roof Mounted (EDVRSPV58) or Wall Mounted (EDVWSPV58) or LDVPV58 (Inline Power Vent).
- Your termination location should be selected to provide the shortest possible vent run.
- Lay out the Vent run; calculating the required elbows and straight runs of 5/8" flex and/or rigid pipe.
- Refer to the Section 4 on Page 10, "Installing the Power Vent" for details.
- Montigo supplies 20' of low voltage wire, which can be spliced to any length. This wire CANNOT run in conduit with any other wire.
- Refer to Section 5 on Page 18, for Wiring Details.
- The gas connection is located on the bottom side of the fireplace.
- Refer to local codes and guidelines for installation requirements.
- Installation and repairs should be done by a qualified contractor and must conform to:
  - Installations in Canada must conform to the current CAN/CGA-B-149.1 and .2 Gas Installation Code and local regulations.
  - Installations in the USA must conform to local codes, or in the absence of local codes to the National Fuel Gas Code, ANSI Z223.1.
  - See Appendix C for installation within the State of Massachusetts. This fireplace must comply with NFPA-54 Chapter 10.
- Refer to Section 6 Page 24, "Installing the Gas Line" for Details.

Understanding the Basic Operation

Residential H36PV fireplace

To operate the fireplace, Montigo has supplied and installed twenty feet of low voltage wire to this electrical control panel. Connect the two wire harness to a standard single pole ON/Off switch located at a location of your choice. You may also extend these wires to any length, as long as you select a wire of equal quality.
Figure A: Rating Plate for IPI electronic ignition
Section 1: Installation Overview and Product Dimensions

Please review the Pre-Installation Checklist on Page 4 for general information on preparing for a successful installation of your fireplace.

The H-Series H36PVN & fireplace

The H36PVN fireplaces may be installed in any location that maintains proper clearances to air conditioning ducts, electrical wiring and plumbing. Safety, as well as efficiency of operation, must be considered when selecting the fireplace location. Try to select a location that does not interfere with room traffic, has adequate ventilation, and offers an accessible pathway for Power Vent installation.

The fireplace dimensions are shown below:

Clearances

To ensure the H-Series H36PVN Fireplaces operate safely, all models must maintain the following clearances.

<table>
<thead>
<tr>
<th>Model#</th>
<th>Top</th>
<th>Sides</th>
<th>Back</th>
<th>Floor (under)</th>
<th>Floor (front)*</th>
</tr>
</thead>
<tbody>
<tr>
<td>H36PVN</td>
<td>8&quot;</td>
<td>0&quot;</td>
<td>1&quot;</td>
<td>0&quot;</td>
<td>0&quot;</td>
</tr>
</tbody>
</table>

*Note: Finishing hardwood, laminate flooring, or tile may be placed directly in front of fireplace, however Montigo waives responsibility for discoloration of flooring materials. Ability to withstand heat should be discussed with the flooring manufacturer. If carpet is to be laid there must be a 12" clearance or hearth between the front of the fireplace and the start of the carpet.

Figure 1. Fireplace dimensions.
Installation

Section 2: Framing

Step 1. To frame in the unit first frame a rough-in enclosure with combustible framing materials, using typical framing practices. The rough-in frame opening for the assembled fireplace is 46" wide, x 50" high x 24" deep. See Figure 2.

NOTE: When constructing the framed opening, please ensure that your combustible 2 x 4 header is at 50" minimum and that there is access to install the gas line when the unit is installed. See Figures 1 and 2a.

Step 2. Place the Fireplace in the enclosure and install the Vent pipe, and Power Vent module. Next, Connect the Gas line and provide a gas service shut-off valve; according to local gas codes, then secure in place with 1/4" wood screws. Install supplied Non-combustible header at 45½" from floor.

Non-combustible Header (supplied by montigo), install to allow 15½" of Non-combustible cement board to fasten above the glass of the unit and Non-combustible header.

Flexible incoming gas connection

Secure nailing flange to 2 x 4's using ¼" wood screws.

Figure 2. Fireplace installation (combustible frame dimensions)

Figure 2a. Fireplace corner installation (combustible frame dimensions)

Figure 2aa. Fireplace installation (Inlet Gas & Power Vent)

Note: Images are shown without screens for clarity purposes. However, your fireplace should not be operated without proper installation of screens.
Section 3: Finishing

Step 1. As shown in Figure 3; Use Non-combustible Cement board, supplied by Montigo, screw to Non-combustible Header and 2 x 4’s at sides of unit (see figure 2a on page 6) using sheet metal screws.

![Diagram of Non-combustible Cement Board](image)

Non-combustible Cement Board (supplied by montigo).

Fasten above the glass of the unit to Non-combustible header and 2 x 4’s at side of unit.

Figure 3. Non-combustible Cement Board the Fireplace, (supplied by Montigo).

Step 2. As shown in figure 3a; Cut standard Drywall / Wall board to complete the installation of fireplace surround.

![Diagram of Combustible Drywall / Wall Board](image)

Combustible Drywall / Wall Board

Fasten above the glass of the unit to Non-combustible header and 2 x 4’s at side of unit.

Figure 3a.

Note: Images are shown without screens for clarity purposes. However, your fireplace should not be operated without proper installation of screens.
Section 3: Finishing

Fireplace Facing

When selecting the finish material for your fireplace, it is important to remember the following:

If the surround of the fireplace is to be painted to match the room decor, heat-resistant paint must be provided. Also, decorative facing must not extend past the fireplace opening at all, because it will interfere with the access to retainers for removal of glass door and access to the lower compartment.

Mantels & Surrounds

National Canadian Gas Association mantel test requirements are for fire hazard prevention to combustible materials.

Please be aware; temperatures over the mantel will rise above normal room temperature and walls above fireplace may be hot to touch.

Note: Images are shown without screens for clarity purposes. However, your fireplace should not be operated without proper installation of screens.

Notes:
- Non-Combustible Cement Board (supplied by Montigo)
- Glass
- Combustible Construction allowed in shaded area
- Combustible Construction
- Drywall/Combustible Construction
- First Combustible Header @ 50" from floor or 8" from top of unit
- Non-combustible Header (supplied by Montigo @ 6½")
- Non-Combustible Cement Board (supplied by Montigo)

CAUTION

When covering the upper metal portion of the fireplace with a non-combustible material, please

Note: The decorative facing materials may be subject to temperatures in excess of 250˚F. This should be considered when selecting facing materials.

We recommend careful consideration be given to the effects of elevated mantle temperatures which may be in excess of product design, for example: candles, plastic or pictures. This can cause melting, deformation, discoloration or premature failure of T.V. radio, and other electronic components.
## Section 4: Installing the Power Vent

Montigo supplies a variety of power venting options. The location of the power vent should be selected and laid out to provide the shortest possible run to an external wall or through the roof. In the event that the external power vent is not aesthetically acceptable or otherwise infeasible, an in-line power vent can be used with this and is included on page 17 of this instruction manual. (contact Montigo for Details)

### Installing a Roof Mounted Vertical Exterior Power Vent (EDVRSPV58)

This section applies to installations where the shortest possible vent run is through the roof. Refer to Appendix A - Power Vent locations, to ensure the planned Power vent location is acceptable. Once the vent location has been established, please refer to the appropriate section below for installation details.

### Venting Layout - Roof Mounted Vertical Exterior Power Vent

Selection of components and details of venting lay out should adhere to the following guidelines:

- Ensure there is a minimum run of 2’ of straight pipe before the power vent
- Ensure the maximum vent run does not exceed 80’
- Ensure the number of 90° elbows does not exceed 6
- Ensure the number of 45° elbows does not exceed 12

### Straight Venting Layout

**Note:** Images are shown without screens for clarity purposes. However, your fireplace should not be operated without proper installation of screens.

### Connection and installation of the vent components

- Use any combination of rigid and flex pipe as required and in any orientation (Male connectors can face in any direction).
- Flex sections may be stretched up to 50% of their total length (e.g. a 24” section maybe stretched to 36”).
- Ensure the pipe ends male to female slide in a minimum of 1 1/2” of overlap.
- Connect all vent sections using a minimum of three sheet metal screws on the outer pipe flue.
- Ensure all runs are supported with a minimum of 3 supports per 10’ of venting.
- When hanging/supporting venting, ensure that 1” clearance is maintained on sides and bottom of vent runs and 2” above horizontal vent runs to any combustible material.
- Rigid pipe may be cut less than half way from the female end only.
- Ensure when cutting sections of rigid pipe to maintain integrity of internal supports.
- Place the springs, supplied with the pipe kit, between the outer and inner pipes to keep the pipes separate and avoid any possible hot spots.
- Montigo recommends the use of a flex section for the final pipe connected directly to the fireplace offering greater flexibility of installation and absorption of movement.
- Firestops must be installed as required by National & local codes.

- When passing vent pipe through a wall use a heat shield.
- Montigo recommends that all exterior corners and joints be sealed with exterior caulking. However, we encourage you to consult your Building Envelope Engineer or Waterproofing Consultant for further recommendations.

**Installation of the EDVRSPV58 External roof mounted power vent module.**

Refer to Appendix A - Power Vent locations, to ensure the planned Vertical Power vent location is acceptable.

*The EDVRSPV58 Power Vent dimensions:*

![Top View](image1)

![Front View](image2)

*The EDVRSPV58F Rough-in Frame dimensions:*

![Top View](image3)

![Front View](image4)
Installing the external roof mounted power vent module

Step 1.
Construct a Vertical Chase for the termination opening to meet the following requirements:

- Opening Size must be: 14 1/2" x 14 1/2" x 18" Min. height.

![Figure 5a. Installation, Vertical Vent pipe. (female end top end).]

Step 2.
Install the Vent pipe female end up, and 2" to 3" MAX. from the top of the Constructed Chase. Also, at this point install the Electrical harness, (EPVH-(10-100) that will communicate with the Power Vent Module.

![Figure 5b. Installation of Rough-in Kit]

Step 3.
Install the Power Vent Rough-in Kit. Pull wire harness through the supplied hole in the bottom corner of the rough-in box, and snap into the slot provided. (See figure 5b inset).

![Figure 5c. (Fasten Rough-in Kit to framing)]

Step 4.
Install fasteners around perimeter of Rough-in Kit. (Holes supplied for ease of installation)

![Figure 5d. (Installed Stainless steel cover)]
Step 5.
Install the Power Vent, Roof-top Stainless steel cover over the Installed Rough-in Kit. (You can see the Electrical harness connector in the top right corner).

![Image 5e](Figure 5e. (Installation of Power Vent Module))

![Image 5f](Figure 5f.)

Step 6.
Install the Power Vent Module Power / communication harness. Hold the Power Vent in close proximity of the assembled Chase, (with stainless steel cover attached) and plug in the Power Vent communication / Power Cord. (Note the direction and orientation of the plug socket). (See Figure 5e & Figure 5f)

![Image 5g](Figure 5g. (Installation of Power Vent Module))

Step 7.
Install the Power Vent Module. Place the Power Vent Module over the stainless steel cover flange and vent pipe, aligning the Power Vent into final position. Ensure the Harness is placed down in the Rough-in box when placing the Power Vent Module into place. The Power Vent Module will sit flush with the stainless steel cover if installed correctly.

![Image 5h](Figure 5h. (Installed Power Vent Module))

Step 8.
Install (3) three stainless steel fasteners around Power Vent Module @120 degrees (penetrating through the inner stainless steel vent cover)

![Image 5i](Stainless Steel Fasteners)

**CAUTION**

- Vent terminations can be very hot. The termination is to be installed higher than 7 feet above a public walkway.
- Do not obstruct, or attempt to conceal, the vent termination. These actions will affect the operation of the fireplace, and may be hazardous.
- In heavy snow areas, take extra care to prevent snow buildup from obstructing the vent termination.
Installation

Installing a Wall Mounted Vertical Exterior Power Vent (EDVWSPV58)

This section applies to installations where the shortest possible vent run is through an exterior wall. Refer to Appendix A - Power Vent locations, to ensure the planned Power vent location is acceptable. Once the vent location has been established, please refer to the appropriate section below for installation details.

Once the vent location has been established, please refer to the appropriate section below for installation details.

Venting Layout - Wall Mounted Vertical Exterior Power Vent

Selection of components and details of venting lay out should adhere to the following guidelines:

- Ensure there is a minimum run of 2' of straight pipe before the power vent.
- Ensure the maximum vent run does not exceed 100'.
- Ensure the number of 90° elbows does not exceed 6.
- Ensure the number of 45° elbows does not exceed 12.

Note: Images are shown without screens for clarity purposes. However, your fireplace should not be operated without proper installation of screens.
Installation

Connection and installation of the vent components should adhere to the following guidelines:

- Connect all vent sections using a minimum of three sheet metal screws on the outer pipe flue.
- Ensure the pipe ends male to female slide in a minimum of 1 1/2" of overlap.
- Ensure all runs are supported with a minimum of 3 supports per 10’ of venting.
- When hanging/supporting venting, ensure that 1” clearance is maintained on all sides to any combustible material.
- Ensure when cutting sections of rigid pipe to maintain integrity of internal supports.
- Place the springs, supplied with the pipe kit, between the outer and inner pipes to keep the pipes separate and avoid any possible hot spots.
- Montigo recommends the use of a flex section for the final pipe connected directly to the fireplace offering greater flexibility of installation and absorption of movement.

Installation of the EDVWSPV58 external wall mounted power vent module.

Refer to Appendix A - Power Vent locations, to ensure the planned Vertical Power vent location is acceptable.

The EDVWSPV58 Power Vent dimensions:

The EPVF58 Rough-in Frame dimensions:
**Installation**

*Installing the external wall mounted power vent module*

**Step 1.** Construct a frame for the termination opening to meet the following requirements:

- Opening Size must be: 14 1/2” x 14 1/2”.

![Figure 7. Framing the Opening for Power Vent](image)

**Step 2.**

Insert the Power Vent Rough-in Box as shown in Figure 7a. Fasten the Box securely in place with Screws or nails. Apply exterior sheathing and finishing if required.

![Figure 7a. Orientation, Placing the Power Vent Inner Box](image)

**Step 3.**

Next, remove the bottom collar and conduit mounting frame as shown Figure 7b. (Place removed hardware in a handy location for re-assembly).

![Figure 7b. Installation of Rough-in Kit](image)

**Step 4.**

Insert the conduit from the Power Vent Module into the rough-in frame through the two top right entry holes. Remove the nut from the supplied strain relief and place as shown, Figure 7c.

![Figure 7c. Installation of Power Vent Conduit](image)

**Step 5.**

Securely fasten bottom Collar pan into the Rough-in frame using the existing hardware, (4-pcs). Tighten Strain Relief nut onto Strain relief.

**Step 6.**

Pull Power Vent Connector, (from behind) half-way through supplied hole in conduit mounting frame, and snap into place, (notches in two plastic wing clips. Orientation not critical).

![Figure 7d. (Installing Conduit connector & conduit mounting frame)](image)

**Step 7.**

Fasten Conduit mounting frame into place using existing hardware, (6-pcs). (Coil conduit in behind cover.)
Installation

**Step 8.**

Install the Power Vent Power / communication harness. Hold the Power Vent in close proximity of the assembled Rough-in Kit, and plug in the Power Vent communication / Power Cord. *(Note the direction and orientation of the pins inside the Power Vent connector, snap together).* *(Figure 7f).*

---

**CAUTION**

- Vent terminations can be very hot. The termination is to be installed higher than 7 feet above a public walkway.
- Do not obstruct, or attempt to conceal, the vent termination. These actions will affect the operation of the fireplace, and may be hazardous.
- In heavy snow areas, take extra care to prevent snow buildup from obstructing the vent termination.

---

**Figure 7f.** *(Installation of Power Vent communication harness)*

**Step 9.**

Install the Power Vent. Place the Power Vent into the Rough-in frame, aligning the Power Vent into final position. Ensure the Harness is placed down in the Rough-in box when placing the Power Vent. *(Secure the Power Vent in Place with the supplied hardware).*

---

**Figure 7g.** *(Completed Installation of Power Vent)*
Installing an In-Line Linear Power Vent (LDVPV58)

This section applies to installations where an external roof or wall mounted power vent is not aesthetically acceptable or feasible.

Venting Layout

Selection of components and details of venting lay out should adhere to the following guidelines:

- Ensure there is a minimum run of 2’ of straight pipe between the fireplace and the power vent.
- Ensure the maximum vent run does not exceed 60’.
- Maximum vent run must be reduced by 10’ for 1’ of pipe running in a vertical downward direction.
- Ensure the number of 90° elbows does not exceed 3 (maximum allowable vent run must be reduced by 10’ for every additional 90° elbow added).
- Ensure the number of 45° elbows does not exceed 6.

Linear Power Vent - Horizontal Termination

** from fireplace to in-line power vent

Maximum allowable vent run must be reduced by ten feet (10’-0”) for every additional 90° elbow added. With a snorkel Termination, reduce the total vent run by an additional twenty feet (20’-0”). *Figure’s 7 and 7a.*

Warning: All venting material must be Montigo flex pipe, with as few joints as possible. All joints use MVA vent splice. Montigo will not be held responsible for any water damage that may occur from not installing the equipment as specified by this document.

Note: Images are shown without screens for clarity purposes. However, your fireplace should not be operated without proper installation of screens.

</tr>
<tr>
<td>E</td>
<td>Rigid Sections</td>
</tr>
<tr>
<td>F</td>
<td>Elbows</td>
</tr>
<tr>
<td>G</td>
<td>Power Cord Harnesses</td>
</tr>
</tbody>
</table>

**Connection and installation of the vent components should adhere to the following guidelines:**

- Connect all vent sections using a minimum of three sheet metal screws on the outer pipe flue.
- Ensure the pipe ends male to female slide in a minimum of 1 1/2" of overlap.
- Ensure all runs are supported with a minimum of 3 supports per 10’ of venting.
- When hanging/supporting venting, ensure that 1” clearance is maintained on all sides to any combustible material.
- Ensure when cutting sections of rigid pipe to maintain integrity of internal supports.
- Place the springs, supplied with the pipe kit, between the outer and inner pipes to keep the pipes separate and avoid any possible hot spots.
- Montigo recommends the use of a flex section for the final pipe connected directly to the fireplace offering greater flexibility of installation and absorption of movement.

**Note:** Images are shown without screens for clarity purposes. However, your fireplace should not be operated without proper installation of screens.
Installation of the LDVPV58 power vent module:

1. The linear power vent can be installed to existing stud construction or directly to cement wall or roof. The LDVPV58 must maintain the clearance to combustibles as shown in Figure 9a. The required service access panel must be framed at 28” X 18”. To enclose the service access panel, (at less than 2”) a minimum 30% free air must be supplied at all times.

2. Plug the power cord into the available slot in the linear power vent.

3. Secure all venting joints with at least three screws and ensure that the joints are properly sealed.

Figure 9b. LDVPV58 Power Vent framing dimensions.

Recessed Termination Installation (VLWB-8) Refer to Appendix A - Termination locations

The VLWB-8 termination is designed to be installed flush with the exterior of the building. This recessed design uses 5/8” vent and allows the installation to be clean and flush so it does not interfere or have an impact with your architectural design.

Figure 10. Linear Power Vent recessed Termination.

NOTE:

The H36PVN requires a specific volume of atmospheric interchange to operate properly and efficiently.

- The fireplace requires a MIN 80in/sq. air movement to function.
- The grille must also be able to shed water, not allowing any moisture to enter the unit.
Section 5: Wiring

The Fireplace A/C power and Power Vent harness’s must be installed before completing the installation of the H36PVN Fireplace. These connections are made from the RH-Side of the fireplace, Figure 12 through Figure 12f.

Step 2. Locate all the Power vent connections & ports, Figure 12b.

Figure 12b. Locate Power vent connections.

Note: To access the fireplace electrical connections from the firebox follow the procedures described in figure 22 through 26.

Install the Power Vent connections as described below:

Step 1. Remove the exterior Access cover, shown Figure 12a.

Figure 12a. Remove Exterior Access Cover.

Step 3. Remove the Power Vent communication port cover from cabinet, (as supplied) Figure 12c. (Philips head screwdriver required).

Step 4. Place the cover plate on the Conduit, then tighten the strain relief nut onto the threads protruding through backside of cover plate, Figure 12e.
**Step 5.** Route the Power Vent Communication conduit into the cover as shown, and connect to the communication Port, *Figure 12d.*

![Figure 12c. Remove Exterior Access Cover.](image)

![Figure 12d. Locate Power vent connections.](image)

*Note orientation of conduit plug into the Port, (flat side/notches).*

**Step 6.** Re-Install the communication harness Port cover, *Figure 12e.* *(Philips head screwdriver required).*

![Figure 12f. Installing the Remote LVT Switch.](image)

**Installing The Remote Switch**

The H36PVN’s Remote LVT (Low Voltage) Switch conduit is located on the RH Side of the fireplace.

*Note:* The switch location must not exceed 30’ from the fireplace.

**Step 7.** Tighten Power Vent Strain relief adjustment screw, *Figure 12e.*

![Figure 12g. Electrical Enclosure Dimensions](image)

*Figure 12g. Electrical Enclosure Dimensions*
WARNING

If the information in these instructions is not followed exactly, a fire or explosion may result causing property damage, personal injury or death.

Figure 13. Wiring schematic for the H36PVN.

Connect to DC wall transformer. See Figure 13a.

Connect the wiring to the linear power vent as outlined in the previous section, and connect the wiring to the fireplace as outlined in the H36PVN schematic, figure 13. Ensure that the proper clearances are maintained for the wiring and conduit. When installing the wiring it must never run above the vent run and it must be at least 1” clear of all venting.

Figure 13a. H36PVN, SIT IPI Wiring Schematic

Conduit & Wiring clearances

Connect the wiring to the linear power vent as outlined in the previous section, and connect the wiring to the fireplace as outlined in the H36PVN schematic, figure 13. Ensure that the proper clearances are maintained for the wiring and conduit. When installing the wiring it must never run above the vent run and it must be at least 1” clear of all venting.

Figure 13b. Conduit and Wiring Clearances.
Installation

Section 6: Installing the Gas Line

FUEL CONVERSION

- Verify that your fireplace is compatible with your available gas type. (Natural Gas or Propane shown by “N” or “L” in your model number)
- If gas type is not compatible, contact your local Montigo representative to purchase a conversion kit.
- Conversion kits must be installed by a qualified service technician.

GAS PRESSURE

- Optimum appliance performance requires proper input pressures.
- Gas line sizing requirements will be determined in ANSI Z221.3 National Fuel Gas Code in the USA and CAN/CGA B149 in Canada.

Pressure requirements are:

<table>
<thead>
<tr>
<th>Pressure Requirements</th>
<th>Gas Pressure</th>
<th>Natural Gas</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum Inlet Pressure</td>
<td>5.5” W.C.</td>
<td></td>
</tr>
<tr>
<td>Manifold Pressure</td>
<td>3.5” W.C.</td>
<td></td>
</tr>
</tbody>
</table>

- The manifold outlet pressure is set from the factory to the appropriate pressure but should be verified.
- To check pressures, control valves have a provision to remove a 1/8” N.P.T. plug to be fitted with a hose barb.
- Montigo requires a service shut off valve be located in an accessible location to isolate the gas supply.
- Only install gas shut-off valves approved for use by the state, province, or other governing body in which the fireplace is being installed.

GAS CONNECTION

- See Figure 22 below for location of gas line access.
- Flexible gas connectors must not exceed 3 feet in length, unless allowable within local regulations.
- Connect incoming gas line to the 1/2” or 3/8” gas inlet port.
- Purge all air out of gas line.
- Check appliance connection, valve and valve train under normal operating pressure with a commercially available leak check solution.
- **DO NOT USE A FLAME OF ANY KIND TO TEST FOR LEAKS.**

Note: After gas line is connected, **each appliance connection, valve and valve train** must be checked while under normal operating pressure with either a liquid solution, or leak detection device, to locate any source of leak. Tighten any areas where bubbling appears or leak is detected until bubbling stops completely or leak is no longer detected.

Important Note: The flexible gas line supplied with the H36PVN may not be acceptable in the jurisdiction which this fireplace is being installed. Please check the Local Gas codes or bylaws for the State or Province prior to installation.

Gas line & valve: Exterior Access

The H36PVN is supplied one (1) one exterior access Panel (LH-side firebox). This panel is fastened directly to the exterior of the firebox with sheet metal screws. To remove the panel follow the steps below:
Section 7: Installing & Removing the Screen and Door

Removing the doors:
The screen and door are removed in a few simple steps.

Step 1. Grab the top edge of the screen and pull towards yourself.

Figure 16. Lifting top edge of screen.

Figure 16a. Pulling top edge of screen towards yourself.

Step 2. Lift screen up and off the screen / glass door retainer slides.

Figure 16b. Lift screen off retainer slides.

Step 3. Remove the two (2) screen / glass door retainer slides by pulling firmly with your fingers.

Figure 16c. Remove screen retainer slides.

Step 4. Remove the supplied glass lifting tool from the packaging. Place in the center of the Glass door as shown, and activate the suction feature of the tool, Figure 16d. NOTE: Read ALL the instruction supplied with the tool, and follow the associated operating procedures.

Figure 16d. Supplied Glass lifting tools.

Figure 16e. Rendering of screen.
Step 5. Hold the Glass Removal Tools firmly, lift the door upward, into the top door frame, Figure 17. Then pull the bottom of the glass door downward, and tilt outward from the bottom fireplace door frame. Figure 17a. NOTE: Read ALL the instruction supplied with the tool, and follow the associated operating procedures.

Step 6. Still holding the Glass Removal Tool firmly, remove the door outward, and away from the Fireplace, Figure 17b.

Step 7. Place the door in a safe location while maintenance, cleaning or other operation are in progress. NOTE: Read ALL the instruction supplied with the tool, and follow the associated operating procedures.

Step 8. To reinstall the door, hook the top edge of the door frame into place. Lower and rest the door frame in place.

Step 9. Slide screen / glass door retainer slides back into place.

Step 10. Hook the bottom tabs of the screen into the slots in the screen / glass door retainer slides.

Step 11. Push screen back into place securing the top of the screen.

NOTICE
Do not use ammonia based or abrasive cleaners on the glass, they will permanently etch the surface. Use an approved gas fireplace glass cleaner such as Kel-Kem or White off.
Section 8: Installing the Log Set

Installing the Logs:
The H36PVN is supplied with six (6) piece ceramic fibre logs. Install as described below:

**Step 1.** Unpack the logs and handle them very carefully. Set them aside in a safe location until required.

**Step 2.** Locate the Log Back Pan Retaining clip, Figure 18a above and remove, Figures 18b & 18c. Place in a safe location (Phillips head screwdriver required).

**Step 3.** Position Back Log 'A' from the previously unpacked package, (Figure 18). Place the Log upright, (as shown Figure 18d) and move the Log flush against the sheet metal Back Pan. Without pressing the Log down, move it as far to the left as possible, bumping the bottom Left corner against the alignment tab, (Figure 18a & 18d). Lastly, Press the Log FIRMLY downward, onto the sharp spikes, shown in Figure 18a & 18e.

**Step 4.** Once the 'Back Log 'A' is in it's final Position, hold the log in place, and reinstall the Retaining Clip (removed earlier). Press down the Clip for the sharp teeth to penetrate into the top of the Log. (Figure 18g). (Phillips head screwdriver required).
Step 5. Position the Bottom Right Log 'B' and place Right end in the sheet metal cradle (located at the far right of the Log Grate), Figure, 18h. and Log Rest in the center of the burners, Figure, 18a. Press FIRMLY onto the spikes. Note location of hole feature in Log.

Step 6. Position Bottom Center Log 'C', with the flat edge down, and place square end inside Log Rest, aligning the center of the Log with the Spikes, Figure, 18a. Press FIRMLY, seating the Log onto the sharp spikes, Figure 18i. Note the color variation in the Log.

Step 7. Place Bottom Left Log 'D', with the flat edge down, and place square end inside Log Rest, aligning the center of the Log with the Spikes, Figure, 18a. Press FIRMLY, seating the Log onto the sharp spikes, Figure 18j. Note the color variation in the Log.

Step 8. Place Front Left Log 'E', with the Knots pointing in the directions shown, Figure, 18k. Place the Darker, narrow end on top of Log 'A' as shown, (arced line). Press FIRMLY onto the sharp spike at Lower end, Figure 18a.

Step 9. Position Front Right Log 'F', with the Knots pointing in the directions shown, Figure, 18l. Place the Lighter, narrow end on top of Log 'E' as shown, (arced line). Align for length and location, Figure 18k.
**Operation**

**Section 9: Operation - Start up Sequence**

For Your Safety - READ BEFORE LIGHTING:

**WARNING**

If the information in these instructions is not followed exactly, a fire or explosion may result causing property damage, personal injury or death.

**WARNING/ CAUTION:** Hot while in operation. Do not touch. Severe burns may result. Keep children, clothing, furniture, gasoline and other liquids having flammable vapours away.

See installation and operating instructions accompanying this appliance.

---

A. This appliance is equipped with an ignition system that lights the pilot burner automatically. Do not attempt to light the pilot by hand.

B. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

What To Do If You Smell Gas:

- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier's instructions.

**Standing (Continuous) Pilot Ignition (SIT NOVA 820)**

**Lighting Instructions:**

1. STOP! Read the safety information above on this label.
2. Lift out the lower Horizontal access panel.
3. Push in gas control knob and turn clockwise to "OFF."
4. Wait five (5) minutes to clear out any gas. Smell for gas, including near the floor. If you then smell gas, STOP! Follow "B" in the safety information above on this label. If you don't smell gas, go to the next step.
5. Locate pilot burner (See illustration at right.) and follow steps below.
6. Turn knob on gas control counter clockwise to "PILOT."
7. Push in gas control knob completely and hold. Light with Piezo Igniter button. Continue to hold the control knob in for about (1) minute after the pilot is lit. Release the knob and it will pop back up. Pilot should remain lit. If it goes out repeat steps 3 through 8.
8. Push in gas control knob and turn counter-clockwise to "ON."
9. Replace the lower Horizontal access panel.
10. Turn on remote switch to ignite fire.

---

**To Turn Off Gas To Appliance:**

1. Turn off remote switch.
2. Lift out the lower Horizontal access panel.
3. Push in gas control knob slightly and turn clockwise to "Off". Do not force.
4. Replace the lower Horizontal access panel.

---

NOTE: Gas control knob cannot be turned from "PILOT" to "OFF" unless knob is pushed in slightly. Do not force.

---

Igniter button. Continue to hold the control knob in for about (1) minute after the pilot is lit. Release the knob and it will pop back up. Pilot should remain lit. If it goes out repeat steps 3 through 8.

- If knob does not pop up when released. Stop and immediately call your service technician or gas supplier.
- If the pilot will not stay lit after several tries, turn the gas control knob to "OFF" and call your service technician or gas supplier.

---

If you cannot reach your gas supplier, call the Fire Department.

C. Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don't try to repair it. Call a qualified service technician. Force or attempt to repair may result in a fire or explosion.

D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system, and any gas control which has been under water.

---

A. This appliance is equipped with an ignition system that lights the pilot burner automatically. Do not attempt to light the pilot by hand.

B. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

What To Do If You Smell Gas:

- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier's instructions.

---

C. Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don't try to repair it. Call a qualified service technician. Force or attempt to repair may result in a fire or explosion.

D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system, and any gas control which has been under water.

---

If the information in these instructions is not followed exactly, a fire or explosion may result causing property damage, personal injury or death.

**WARNING/ CAUTION:** Hot while in operation. Do not touch. Severe burns may result. Keep children, clothing, furniture, gasoline and other liquids having flammable vapours away.

See installation and operating instructions accompanying this appliance.

---

A. This appliance is equipped with an ignition system that lights the pilot burner automatically. Do not attempt to light the pilot by hand.

**WARNING/ CAUTION:** Hot while in operation. Do not touch. Severe burns may result. Keep children, clothing, furniture, gasoline and other liquids having flammable vapours away.

See installation and operating instructions accompanying this appliance.
Section 10: Maintenance

Removing the Log Grate:
The H36PVN is supplied with a log Grate that is fastened directly to the base of the Fireplace. To remove the Grate, to perform certain Maintenance functions, follow the steps described below:

Step 1. CLOSE GAS VALVE AT INCOMING TO FIREPLACE, (By Qualified Persons ONLY, See ‘Before You Start’ in the Index).

Step 2. Remove the two (2) machine screws that hold the Pilot Assembly in place, Figure 20. (Philips head screwdriver required).

Step 3 & 4. Remove the two (2) (RH & LH) Base mounting machine screws, Figure 20a & 20b. (Philips head screwdriver required).

Step 5. Loosen, and Remove the Flexible Gas hose (at fitting), (turn clockwise, left to right) Figure 20c & 20d. (3/4" Open end wrench required).

NOTE: Ensure all 5-steps are complete before removing Log Grate. (Failing to do so may damage the flexible gas hose, or mounting hardware of the grate). Figure 14e.

Removing the Refractory:
The H36PVN is supplied three (3) pieces of firebox refractory Lining. These panels are fastened directly to the interior sides, and back of the Fireplace firebox with brackets. To remove the brackets and panels follow the steps described below:

Step 1. Remove the RH-TOP machine screw that hold the Side Refractory panel in place, then the bottom, Figure 22. (Philips head screwdriver required).

Step 2. Remove the RH-Refractory panel from the firebox, Figure 22. (Place the Refractory panel somewhere safe where it will not get chipped or damaged).

Step 3. Follow step 1 & 2 to remove the LH-Side Refractory panel, Figure 22. (Philips head screwdriver required).

Figure 20a. (LH Base mounting machine screw).
Figure 20b. (RH Base mounting machine screw).
Figure 20c. (Gas fitting).
Figure 20d. (Loosening Gas fitting on burner).
Figure 20e. (Log Grate Removal Sequence).
Figure 22. (Removing Refractory panels).
**Removing the Stand-off Panels:**

The H36PVN is supplied two (2) two Stand-off Panels (RH & LH) that hold the firebox refractory Lining in place. These panels are fastened directly to the interior sides of the firebox with sheet metal screws. To remove the panels follow the steps described below:

**Step 1.** Remove the two (2) RH-TOP machine screw that hold the Side panels in place, then the bottom two (2) machine screws, **Figure 24.** *(Philips head screwdriver required).*

**Step 2.** Tilt the panel out from the top, and remove the panel from the firebox. Pull out of the firebox straight, toward you without hitting the Grate or panel Retaining brackets, **Figure 24a.**

**Note:** Place the panel somewhere safe where it will not get damaged.

**Step 3.** Follow step 1 & 2 to remove the LH-Side panel, **Figure 24 & 24a.** *(Philips head screwdriver required).*

---

**Removing the Access Panel:**

The H36PVN is supplied one (1) one interior access Panel (RH-side) that contains the electronics and power control circuits. This panel is fastened directly to the interior of the firebox with sheet metal screws. To remove the panel follow the steps below:

**Step 1.** Remove the RH Refractory Panel as described in **Figure 22.**

**Step 2.** Remove the RH Refractory Stand-off Panel as described in **Figure 24 & 24a.** *(Philips head screwdriver required).*

**Step 3.** Having these two steps completed, remove the eight (8) machine screw that hold the Side panels in place, **Figure 26.** *(Philips head screwdriver required).*

**Step 4.** Slightly tilt panel, and pull out between the grate and firebox wall, **Figure 26a.**
Removing the Interior firebox Access Panel:
The H36PVN is supplied one (1) one interior access Panel (LH-side firebox) that contains the Gas valve, and electronics. This panel is fastened directly to the interior of the firebox with sheet metal screws. To remove the panel follow the steps below:

**Step 1.** Remove the LH Refractory Panel as described in Figure 22.

**Step 2.** Remove the LH Refractory Stand-off Panel as described in Figure 24 & 24a.

**Step 3.** Once these two steps are complete, remove the eight (8) machine screw that hold the Side panels in place, Figure 28. (Phillips head screwdriver required).

**Step 4.** Slightly tilt panel, and pull out between the grate and firebox wall, Figure 28a.

---

**General**

- **Have the fireplace and installation inspected yearly.** The inspection must include, but is not limited to, the following:
  - A visual check of the entire vent system and termination.
  - An inspection of the explosion relief flappers and the door gasketing to ensure a proper seal.
  - An inspection of the burner, venturi, and primary air openings.
  - An inspection of the gas valve, gas components, and pilot flame. For your convenience a 1/8” manifold pressure tap is supplied on the gas valve for a test gauge connection.
  - Ensure proper log placement as per this manual.
  - Inspection of all optional equipment; fans, thermostats, etc.

- **For Natural Gas** this appliance requires a minimum inlet pressure of 5.5” W.C. and a manifold pressure of 3.5” W.C.

- **For Propane Gas** this appliance requires a minimum inlet pressure of 11” W.C. and a manifold pressure of 10” W.C.

- Always keep the fireplace area clear and free of combustible materials, as well as gasoline and other flammable vapors and liquids.

- Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

---

**Cleaning**

When the fireplace is first activated, there may be some smoking and a visible film may be left on the glass. This is a normal condition, and is the result of burning of protective coatings on new metal.

- Glass must be cleaned periodically to remove any film (which is a normal by-product of combustion) which may be visible. Film can easily be removed by removing the door, as shown on Pages 26 and 27. Handle the door carefully, and clean it with non-abrasive glass cleaners. One of the most effective products is Kel Kem.

- Use a vacuum cleaner or whisk broom to keep the control compartment, burner, and firebox free from dust and lint.

- Logs may be cleaned periodically with a vacuum to remove soot or other contaminates.
Maintenance

Troubleshooting (only to be done by qualified service personnel):

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Troubleshooting Step</th>
</tr>
</thead>
<tbody>
<tr>
<td>Powervent not running when WALL SWITCH is turned ON</td>
<td>Check to make sure Main Power is ON and Fuse is not blown</td>
</tr>
<tr>
<td>Fireplace doesn’t spark after turning WALL SWITCH on</td>
<td>Check to make sure Power Vent is ON and running at Full Speed. Please note the fireplace has a 1 minute pre-purge before lighting the pilot assembly</td>
</tr>
<tr>
<td>Fireplace goes out after sometime and turns back ON automatically after sometime</td>
<td>Ensure the vent or the exhaust termination are not blocked by debris. Adjust the Fan speed higher and restart the fireplace. If failure persists, contact Montigo for support.</td>
</tr>
</tbody>

Appendix

Appendix A: Power Vent Locations

A = clearance to the termination frame above grade, veranda, porch, deck, or balcony [30 inches (75 cm) minimum]
B = clearance to door, or sides and top of window, that may be opened [30 inches (75 cm) minimum for appliances.]
C = clearance to bottom of window that may be opened horizontally [36 inches (92 cm) minimum for appliances.]
D = no clearance to permanently closed window when installed with approved glass penetration termination
E = clearance to permanently closed window [30 inches (75 cm) recommended to prevent condensation on window]
F = vertical clearance to ventilated soffit located above the termination within a horizontal distance of [30 inches (75 cm) from the centreline of the termination [30 inches (75 cm) minimum]
G = clearance to unventilated soffit [30 inches (75 cm) minimum to non-combustibles] [30 inches (75 cm) minimum to combustibles]
H = clearance to outside corner [30 inches (75 cm) minimum]
I = clearance to inside corner [30 inches (75 cm) minimum]
J = * not to be installed above a meter/regulator assembly within 40” (103 cm) horizontally from the centreline of the regulator
K = clearance to service regulator vent outlet [3 feet (90 cm) minimum in the United States] [6 feet (1.8 m) minimum in Canada]
L = clearance to non-mechanical air supply inlet to building or the combustion air inlet to any other appliance [16 inches (41 cm) minimum for appliances ≤100 000 BTU/H (30kW)]
M = clearance to mechanical air supply inlet [6 feet (1.8 m) minimum]

N = † clearance above paved sidewalk or a paved driveway located on public property [7 feet (2.1 m) minimum]
O = clearance under veranda, porch, deck, or balcony [30 inches (75 cm) minimum] [30 inches (75 cm) minimum to non-combustibles] [30 inches (75 cm) minimum to combustibles]
Q = clearance above a roof [18 inches (46 cm) minimum]
P = clearance to adjacent walls and neighboring buildings [30 inches (75 cm) minimum]
S = clearance from corner in recessed location [30 inches (75 cm) minimum]
T = maximum depth in recessed location [48 inches (122 cm) minimum]
U = minimum width for back wall of recessed location [60 inches (150 cm) minimum]
V = minimum horizontal clearance between the frames of two terminations that are level, (see applicable Detail)
W = horizontal clearance between the frames of two terminations that are not level. [30 inches (75 cm) minimum]

† a vent shall not terminate directly above a sidewalk or paved driveway which is located between two single family dwellings and serves both dwellings

‡ only permitted if veranda, porch, deck, or balcony has an open side that is equal to or greater than the depth of the enclosed area

* as specified in CGA B149 Installation Codes. Note: local Codes or Regulations may require different clearance.

MONTIGO RESIDENTIAL WARRANTY PROGRAM

Canadian Heating Products Inc. and/or Montigo DelRay Corp (collectively referred to herein as “The Companies”), warrants the Montigo gas appliance (referred to herein as ‘the appliance’) to be free from defects in materials and workmanship at the time of manufacture. The gas appliance and related components are further subject to the terms and conditions set forth below.

This warranty covers the following Montigo product series:
Distinction, Divine & Divine Outdoor (H-Series), Illume (FID Inserts), Phenom (L/P/PL-Series), Exemplar (R/RP-Series), Mahana and DelRay

**QUALIFICATIONS TO THE WARRANTY**

This Warranty only covers gas appliances installed in the United States or Canada.

To receive the benefits of this warranty, the appliance must be purchased, installed and serviced annually by a dealer authorized by The Companies for the warranty to be valid.

The appliance must be installed by a licensed professional in accordance with The Companies’ installation instructions and local building codes. The warranty on the appliance covers only components manufactured by The Companies. The use of components manufactured or supplied by other manufacturers and used in conjunction with the appliance could create serious safety hazards, may result in the denial of certification by building codes. Such use may untimely void this warranty. This warranty does not cover any damages occurring from the use of any components not manufactured or supplied by The Companies.

The appliance must be subjected to normal use. The appliance is designed to burn natural gas (NG) or liquefied petroleum (LP) only. Burning conventional fireplace fuels such as wood, coal or any other solid fuel will cause damage to the appliance, produce excessive temperatures will result in a fire hazard and void all warranties. This warranty is transferable. The appliance must remain in its original place of installation to be valid.

If the components of the appliance covered by this warranty are found to be defective within the time frame stated (see The Companies investigation of claims), The Companies will, at its option, replace or repair defective components of the appliance manufactured by The Companies at no charge and will also pay for labor costs (in accordance with schedule) incurred in replacing or repairing components. If repair or replacement is not commercially practical, The Companies will, at its sole discretion, fully discharge all obligations under the warranty by refunding the verified dealer purchase price of the appliance, excluding the cost of labor unless the labor is covered by the terms of the warranty.

This warranty covers only parts and labor as provided above. In no case shall the companies be responsible for materials, components or construction, which are not manufactured or supplied by The Companies, or for the labor necessary to install, repair or remove such materials, components or construction. All replacement or repair components will be shipped F.O.B. from the nearest Company factory.

**LIMITATION ON LIABILITY**

It is agreed and understood that The Companies sole obligation, and purchaser’s exclusive remedy under this warranty, under any other warranty, expressed or implied, or in contract, tort or otherwise, shall be limited to repair, replacement or refund as specified above. The opinion of The Companies with respect to these matters shall be final.

In no event shall The Companies be responsible for any incidental or consequential damages caused by (but not limited to) improper installation, installation by an unqualified or unauthorized installer, accident, lack of regular maintenance, user error, abuse, misuse, Acts of God, power surges, floods, natural disasters, force majeure, defects in its appliance whether such damage occurs or is discovered before or after replacement or repair, and whether or not such damage is caused by The Companies negligence. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so the above limitation or exclusion may not apply to you. The duration of any implied warranty with respect to the appliance is limited to the duration of the foregoing warranty. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so the above limitation or exclusion may not apply to you.
Appendix B: Warranty Continued

EXCLUSIONS TO WARRANTY
Corrosion or rust of any kind due to a lack of maintenance, inadequate combustion air or improper venting and corrosive chemicals/environments, expansion and contraction of metals or minor movements of components causing noise are not covered by this warranty.

Willful misconduct (i.e. use of the appliance with problems known to the purchaser and causing further damages), including unauthorized or self-performed 'fixing' or exploration of the appliance's internal workings will void the warranty.

Appliances on which the serial number has been altered, defaced, removed or made illegible will void the warranty.

Costs incurred for diagnosis, service work, shipping and handling of defective or replacement parts are not covered under this warranty.

The published warranties are not applicable for any equipment manufactured by The Companies that has been sold direct to the consumer via internet or auction websites. The Companies do not endorse, approve or certify any online sale of its products through auction websites, online retailers or any other method of online sales direct to consumers.

INVESTIGATION OF CLAIMS AGAINST WARRANTY
The Companies reserve the right to investigate any and all claims against this warranty and decide upon method of settlement.

The Companies are not responsible for work done without written consent of The Companies.

The Companies shall in no event be responsible for any warranty work done without first obtaining the Companies written consent.

The Companies employees and dealers have no authority to make any warranties to neither alter this warranty nor authorize any remedies in addition to or inconsistent with those stated within this warranty.

IF WARRANTY SERVICE IS NEEDED
To make a claim under this warranty, contact your installing dealer or contractor. The installing dealer is responsible for providing service and will contact the companies to initiate warranted parts replacements. In the event the installing dealer is unavailable, contact your nearest authorized Montigo dealer (www.Montigo.com) or contact Montigo direct at techsupport@montigo.com. Ensure you have your sales receipt and the model and serial number of your appliance.

DO NOT ATTEMPT TO DO ANY SERVICE WORK YOURSELF
If you cannot locate the installing dealer, or nearest dealer/distributor, you must notify The Companies in writing.
Appendix

Appendix C: State of Massachusetts

Amendment

(Gas Fireplace / Equipment sold in the State of Massachusetts)

5.08: Modifications to NFPA-54, Chapter 10

(1) Revise NFPA-54 section 10.5.4.2 by adding a second exception as follows:
Existing chimneys shall be permitted to have their use continued when a gas conversion burner is installed, and shall be equipped with a manually reset device that will automatically shut off the gas to the burner in the event of a sustained back-draft.

(2) Revise 10.8.3 by adding the following additional requirements:
(a) For all side wall horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than seven (7) feet above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

1. INSTALLATION OF CARBON MONOXIDE DETECTORS. At the time of installation of the side wall horizontal vented gas fueled equipment, the installing plumber or gas fitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gas fitter shall observe that a battery operated or hard wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors
   a. In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or an attic, the hard wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level.
   b. In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

2. APPROVED CARBON MONOXIDE DETECTORS. Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2034 listed and IAS certified.

3. SIGNAGE. A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2) inch in size, “GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS”.

4. INSPECTION. The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.08(2)(a)1 through 4.
(b) EXEMPTIONS: The following equipment is exempt from 248 CMR 5.08(2)(a)1 through 4:
   1. The equipment listed in Chapter 10 entitled “Equipment Not Required To Be Vented” in the most current edition of NFPA 54 as adopted by the Board; and
   2. Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

(c) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM PROVIDED. When the manufacturer of Product Approved side wall horizontally vented gas equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:
   1. Detailed instructions for the installation of the venting system design or the venting system components; and
   2. A complete parts list for the venting system design or venting system.

(d) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM NOT PROVIDED. When the manufacturer of a Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for venting the flue gases, but identifies “special venting systems”, the following requirements shall be satisfied by the manufacturer:
   1. The referenced “special venting system” instructions shall be included with the appliance or equipment installation instructions; and
   2. The “special venting systems” shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.
   (e) A copy of all installation instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.

(3) After NFPA-54 section 10.10.4.2 add a new section 10.10.4.3 as follows:
When more than four gas appliances are to be vented through a common gas vent or common horizontal vent manifold, a plan of the proposed vent installation shall be submitted to the Inspector and the serving gas supplier for review and approval.
Indoor fireplace in protected outdoor applications

This fireplace may be installed into outdoor locations provided they are suitably protected from direct water impingement. However, all installation clearances in the appliance manual must be observed. Framing, Clearances to Combustibles, Mantel Heights, Facing Requirements, Venting Installation, etc. Use supplied Safety Screen.

### Notes
- Overhang requirements must be applied to both the front and sides of the fireplace.
- Indoor see-through models cannot be installed as indoor/outdoor fireplaces, as air flows through both sides of the fireplace.
- If the fireplace will be in contact with salt water, then an outdoor fireplace is recommended.
- Follow all building codes, including those addressing fireplace penetration of an exterior building envelope.

### NOTICE
Units with tempered glass doors are vulnerable to rapid and/or extreme changes in temperature (thermal shock). Take care to prevent water from contacting the fireplace, especially if it is hot.

### Example formula

<table>
<thead>
<tr>
<th>Dimension “A”</th>
<th>X .75</th>
<th>= min. overhang depth</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>The overhang must extend at least 75% of the roof line height (A)</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Height is measured from bottom of fireplace opening to the ceiling</td>
</tr>
</tbody>
</table>

**For example:** If distance A is 84”, the overhang must extend at least 63”.

### See through fireplace

- See table for min. overhang depth
- Outdoor area
- “A” dimension is from bottom of fireplace opening to bottom edge of overhang
- Bottom edge of fireplace opening

### Single sided fireplace

- See table for min. overhang depth
- Outdoor area
- “A” dimension is from bottom of fireplace opening to bottom edge of overhang
- Outdoor area
- Fireplace cannot penetrate building envelope

- Follow all product installation instructions; including framing, clearances to combustibles, mantel heights, Facing Requirements, venting installation, etc. Use supplied safety screen.
- All wiring connections to line power shall be in accordance with outdoor requirements of, NEC/NFPA.70 in the USA Canadian Electrical Code, CSA C22.1 for Canada.
- The Fireplace is not to be operated in temperatures below freezing (0°C I 32°F)
