**Installation & Maintenance Manual**

---

**WARNING:**
FIRE OR EXPLOSION HAZARD
Failure to follow safety warnings exactly could result in serious injury, death, or property damage.

— Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

— WHAT TO DO IF YOU SMELL GAS
  - Do not try to light any appliance.
  - Do not touch any electrical switch; do not use any phone in your building.
  - Leave the building immediately.
  - Immediately call your gas supplier from a neighbour’s phone. Follow the gas supplier’s instructions.
  - If you cannot reach your gas supplier, call the fire department.

— Installation and service must be performed by a qualified installer, service agency or the gas fitter.

---

**NOTICE**
Installer: Leave this manual with the appliance.
Consumer: Retain this manual for future reference.

**CAUTION**
Installation and service must be performed by a qualified installer, service agency or the gas fitter.

---

**DANGER**
HOT GLASS WILL CAUSE BURNS.
DO NOT TOUCH GLASS UNTIL COOLED.
NEVER ALLOW CHILDREN TO TOUCH GLASS.

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and must be installed for the protection of children and other at-risk individuals.

---

**WARNING**
Some materials used in the manufacturing process of this product can expose you to Benzene which is known in the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65warnings.ca.gov

• The installation of this fireplace must be done by a qualified and certified gas appliance installer.
• Check local codes and read all instructions prior to installation.
General

Congratulations on your purchase of a Montigo Fireplace.

With over 30 years of experience, Montigo is committed to providing you with a gas fireplace that is not only a beautiful addition to your space, but that is also designed and manufactured to the highest safety, reliability and engineering standards.

We strongly encourage you to read and carefully follow the instructions laid out in this Installation, Operation and Maintenance Manual and retain it for your future reference. Pay special attention to all cautions, warnings, and notices throughout this manual intended to ensure your safety.

This manual covers installation, operation and maintenance. Lighting, operation and care of this fireplace can be easily performed by the homeowner. All installation and service work should be performed by a qualified or licensed installer, plumber or gas fitter as certified by the state, province, region or governing body where the fireplace is being installed.

This installation, operation and maintenance manual is applicable to the models described in Table 1. Refer to your rating plate to verify included options.

Warranty and Installation Information: (See Appendix B)

The Montigo warranty will be voided by, and Montigo disclaims any responsibility for, the following actions:

- Modification of the fireplace and/or components including Direct-Vent assembly or glass doors.
- Use of any component part not manufactured or approved by Montigo in combination with this Montigo fireplace system.
- Installation other than as instructed in this manual.
- Consult your local Gas Inspection Branch on installation requirements for factory-built gas fireplaces. Installation & repairs should be done by a qualified contractor.

Figure 1 H38ST, H42ST, Specifications
Section A: Before You Begin

IMPORTANT MESSAGE: SAVE THESE INSTRUCTIONS
The H See Through fireplaces must be installed in accordance with these instructions. Carefully read all the instructions in this manual first. Consult the Local Gas Branch to determine the need for a permit prior to starting the installation. It is the responsibility of the installer to ensure this fireplace is installed in compliance with the manufacturers instructions and all applicable codes.

Installation Checklist

- Determine the desired install location of your fireplace.
- See Section 1, Dimensions and refer to the Framing Section 2 for details.
- Select the location of your termination and resulting vent run.
- Your selected termination location must be the highest point in the Direct Vent installation.
- Should it be impossible to meet the venting requirements laid out in Section 3: Venting, please contact a local Montigo dealer regarding the use of a Montigo Power Vent.
- Lay out the Vent run; calculating the required elbows and straight runs of 5”/8” flex and/or rigid pipe.
- Layout Electrical Requirements Refer to Section 4: Wiring, for Details.
- Refer to Section 5: Installing the Gas Line, for details on the gas connection and access.
- Refer to local codes and guidelines for installation requirements.
- Installation and repairs should be done by a qualified contractor and must conform to:
  - Installations in Canada must conform to the local codes or in the absence of local codes to the current version of Natural Gas and Propane Installation Code, CSA B149. Electrical installations must conform to the local codes or, in the absence of local codes, to the current version of Canadian Electrical Code, CSA C22.1.1
  - Installations in the USA must conform to the local codes or in the absence of local codes to the current version of National Fuel Gas Code, ANSI Z223.1/NFPA 54. Electrical installations must conform to the local codes or, in the absence of local codes, to the current version of the National Electrical Code, ANSI/NFPA 70. See Appendix C for installation within the State of Massachusetts

- Installation and repairs should be done by a qualified service person. The appliance should be inspected before use and at least annually by a professional service person. More frequent cleaning might be required due to excessive lint from carpeting, bedding material, etc. It is imperative that control compartments, burners, and circulating air passageways of the appliance be kept clean.
# Standard Installation Checklist

This standard installation checklist is to be used by the installer in conjunction with, not instead of, the instructions contained within this installation manual.

**Comments:**

---

*Only applicable for PL Series*
Section 1: Product Dimensions

Please review the Installation Checklist for general information on preparing for a successful installation of your fireplace.

The fireplace may be installed in any location that maintains proper clearances to air conditioning ducts, electrical wiring and plumbing. Safety, as well as efficiency of operation, should be considered when selecting the fireplace location. Select a location that does not interfere with room traffic, has adequate ventilation and offers an accessible path for Direct Vent installation.

**H38FSD Dimensions**

**H42FSD Dimensions**
### Section 2: Framing

#### In wall framing dimensions

**NOTE:** When constructing the framed opening, please ensure there is access to install the gas line when the unit is installed.

- Slide the fireplace into the cavity.
- Tack four studs (Vertical, “broken line”) in place, shown.
- Secure the fireplace in position by nailing into these cleats.

**WARNING**

When this appliance is installed directly on ANY combustible other than wood flooring (carpet, vinyl, etc.). It must be installed on an equivalent wood or metal panel. This material must extend the full width and depth of the appliance.
Clearances H38DF*ST

When installing a shelf over the top of the fireplaces, the following guidelines must be adhered to:
For Side Vent applications, the minimum clearance is 2" from the side of the fireplace to a wall, or any combustible materials, and 10" clearance from the top of the fireplace to the underside of any combustible shelf materials.
For Top Vent applications, the minimum clearance is 2" from the side of the fireplace to a wall, or any combustible materials, and 17 1/2" to the underside of any combustible shelf materials.
1" clearance is maintained on sides and bottom of vent runs and 2" above horizontal vent runs to any combustible material.

Clearances H42DF*ST

When installing a shelf over the top of the fireplaces, the following guidelines must be adhered to:
For Side Vent applications, the minimum clearance is 2" from the side of the fireplace to a wall and 12" clearance from the top of the fireplace to the underside of any combustible shelf materials.
For Top Vent applications, the minimum clearance is 2" from the side of the fireplace to a wall and 19" to the underside of any combustible shelf materials.
1" clearance is maintained on sides and bottom of vent runs and 2" above horizontal vent runs to any combustible material.

† Note: Clearance from top of fireplace to a ceiling within the fireplace enclosure.

** Note: For mantel clearance, please refer to Section 6: Finishing

Installing the Nailing Flange Extension

Note: The nailing flange extension can be substituted with a piece of NON-Combustible material of the same size and thermal characteristics, ie: cement board or equivalent. This is recommended in applications where the facing materials will not adhere to the metal nailing flange.

Once the fireplace is placed into the rough framed opening, the supplied Nailing Flange Extension (Part No. H42074) must be fasten securely into place, with nails or wood screws.

The Supplied nailing extension must be placed along the top edge of the fireplace and securely fastened in place to the non combustible header and combustible wood framing.

![Figure 4.b Installing standoffs](image)
Section 3: Venting

Montigo supplies a variety of direct venting and termination options. The direct vent termination location MUST be selected such that it is the highest point in the venting assembly. It should also be selected such that it provides the shortest vent run possible. Should it be impossible to ensure that the termination is the highest point or to meet the venting guidelines laid out below please contact your Montigo dealer to discuss power venting options.

Notes For Planning Venting:
- Venting can originate from the unit through the top or through the rear.
- Venting can terminate through the roof or through an exterior wall.
- Refer to Appendix A - Termination Locations to ensure the planned termination location is acceptable.
- Once the termination location has been established, refer to the appropriate section below for installation details.
- All fireplaces shipped from the factory are top vent.
- Silicone application is NOT required when joining Montigo vent pipes and components.

Section 3-1: Converting to Side Vent

Use the following instructions to convert a unit for side vent use:
- Remove the Side flue cover and gasket (5" and 8") on the flue outlet, as shown in Figure 5.
- Next, Remove the Top flue collar’s (5" and 8") on the flue outlet, as shown in Figure 5.
- Install the (removed) Side flue cover and gasket material, to the Top vent outlet. Fasten the cover with included hardware, as illustrated Figure 5b.
- Install the (5" and 8") collars to the side vent outlet using the included hardware, as illustrated Figure 5b.

NOTICE

Under no circumstances can Montigo flex venting be cut to accommodate an installation. Use an alternative length to complete your vent run.
Section 3-2: Installing a Roof Mounted Direct Vent Termination

This section applies to installations where the direct vent termination will be roof mounted.

Section 3-2-1: Venting Layout
Selection of components and details of venting lay out should adhere to the following guidelines:

- The maximum termination point is 32’ above the fireplace (NOTE: if the maximum termination height is used, the flame pattern may be affected).
- The Vertical termination must be a minimum 2’ higher than where the termination exits the roofing materials, (asphalt shingles, cedar shakes, etc). This distance should be measured from the high side of the roof slope where the flue flashing intersects the roofing materials. (see Figures 8 to 8c).
- Termination location must be a minimum 6’ from a mechanical air inlet.
- Termination location must be a minimum 18” from a parapet wall.
- For a more detailed diagram of allowed termination locations, see Appendix A.
- A maximum of two offsets (each offset is made up of 2-90° bends) may be made for vertical vent runs.
- Firestops must be installed as required by National & local codes.
- Ensure all horizontal runs are supported with a minimum of 3 supports per 10’ of venting.
- Install all roof flashing and storm collars as shown.

Roof mounted terminations
The following details are some possible configurations for roof mounted terminations. See below.
Figure 6.d Side vent, Roof mounted venting (1 = 90° bend).
Section 3-3: Installing a Wall Mounted Termination 5"/8"

This section applies to installations where the direct vent termination will be wall mounted. **Note:** If subject to a highly corrosive environment i.e. seaside, Montigo recommends using Stainless Steel Termination.

**Installation of termination with built in frame**
A termination with a built-in frame is installed during framing of a structure.
1. Frame the termination opening to 11" x 11".
2. Install exterior sheathing to the structure framing.
3. Fasten the termination to the sheathing using a minimum of 4 screws.

![Figure 7. Installing a PTO4-F termination.](image)

**Installation of termination frame at time of framing**
Terminations with a MSR frame allow the installation of the frame prior to installation of the termination.
1. Frame the termination opening to 12" x 12".
2. Secure the MSR Frame to the exterior sheathing of the structure.
3. Fasten the termination to the MSR Frame using a minimum of 4 screws.

![Figure 7.b Installing a PTO termination with the MSR frame.](image)

**Installation of termination frame at time of framing in masonry**
Terminations with a BSR frame allow the installation of the frame in masonry prior to the installation of the termination
1. Frame the BSR opening to 12" x 12".
2. Secure the BSR Frame to the exterior sheathing of the structure.
3. Fasten the termination to the BSR Frame using a minimum of 4 screws.

![Figure 7.c Installing a PTO termination with the BSR frame.](image)

**Installation of a termination shield for vinyl siding**
The VSS Termination shield is installed when the exterior of a structure is clad with Vinyl siding. It is placed directly above, and on-center with the termination.

![Figure 7.d Installing a PTO termination with MOSR frame.](image)

**Installation of a termination from inside structure**
A Termination with a MOSR Frame is installed from the inside of the structure. These are commonly used in high-rise construction.
1. Frame the MOSR opening to 12" x 12".
2. Fasten the MOSR frame to the interior side of the studs, concrete, or finished wall construction using a minimum of 4 screws.
3. Insert the termination into the MOSR frame as shown here, (from the inside) and attach to the MOSR by installing a min. quantity of 4 bolts into the threaded nuts on the MOSR Frame.

**Installing heat guards**
Installing heat guards over terminations is recommended in installations where the termination is located within 7' feet above grade, or above a pedestrian walkway, and may be required by code in public areas.

![Figure 7.e Installing the VSS Vinyl Shield.](image)

1. Ensure that the two long mounting brackets are facing the bottom of the termination (See inset). This will provide more heat protection at the top of the termination, where temperatures are highest.
2. Attach to the faceplate of the termination using four sheet metal screws.

![Figure 7.f Installing a PTO termination heat guard.](image)
Section 3-3-1: H38ST Venting Layout: Wall Mounted Termination

Top Venting Graph
Measure the vertical height from the fireplace hearth to the centre of the termination and the horizontal run from the fireplace flue collar to the wall flange of the termination. Plot on the Venting Graph with an ‘X’. If the ‘X’ falls on or above the top boundary of the shaded area, the installation is acceptable.

Selection of components and details of venting layout should adhere to the following guidelines:
- Vent terminations must not be recessed in walls or siding.
- For Heat Shield requirements see Section 3-3.
- Once the proposed venting layout has been determined refer to graph to ensure the layout is acceptable.

Notes Wall Mounted Terminations: TOP VENT
- All measurements for vertical or horizontal runs are measured from center of the vent pipe.
- Venting runs must fall within the limits set by the venting graph.

Example A: (Acceptable Installation)
If the vertical dimension from the hearth is 114” and the horizontal run to the wall flange of the vent termination is 168”, this would be an acceptable installation.

Example B: (Unacceptable Installation)
If the vertical dimension from the hearth is 36” and the horizontal run to the wall flange of the vent termination is 84”, this would not be an acceptable installation.

Example C: (Unacceptable Installation)
If the vertical dimension from the floor of the fireplace is 60” and the horizontal run to the wall flange of the vent termination is 144”, this would not be an acceptable installation.
Side Venting Graph

Measure the vertical height from the fireplace hearth to the centre of the termination and the horizontal run from the fireplace flue collar to the wall flange of the termination. Plot on the Venting Graph with an 'X'. If the 'X' falls on or above the top boundary of the shaded area, the installation is acceptable.

Selection of components and details of venting layout should adhere to the following guidelines:

• Vent terminations must not be recessed in walls or siding.
• For Heat Shield requirements see Section 3-3.
• Once the proposed venting layout has been determined refer to graph to ensure the layout is acceptable.

Notes Wall Mounted Terminations: SIDE VENT

• All measurements for vertical or horizontal runs are measured from center of the vent pipe.
• Venting runs must fall within the limits set by the venting graph.

Example A: (Acceptable Installation)
If the vertical dimension from the hearth is 120” and the horizontal run to the wall flange of the vent termination is 138”, this would be an acceptable installation.

Example B: (Unacceptable Installation)
If the vertical dimension from the hearth is 48” and the horizontal run to the wall flange of the vent termination is 96”, this would not be an acceptable installation.

Example C: (Unacceptable Installation)
If the vertical dimension from the floor of the fireplace is 72” and the horizontal run to the wall flange of the vent termination is 120”, this would not be an acceptable installation.

H38DFST Side Vent Venting Graph

Measure the vertical height from the fireplace hearth to the centre of the termination and the horizontal run from the fireplace flue collar to the wall flange of the termination. Plot on the Venting Graph with an 'X'. If the 'X' falls on or above the top boundary of the shaded area, the installation is acceptable.

Selection of components and details of venting layout should adhere to the following guidelines:

• Vent terminations must not be recessed in walls or siding.
• For Heat Shield requirements see Section 3-3.
• Once the proposed venting layout has been determined refer to graph to ensure the layout is acceptable.

Notes Wall Mounted Terminations: SIDE VENT

• All measurements for vertical or horizontal runs are measured from center of the vent pipe.
• Venting runs must fall within the limits set by the venting graph.

Example A: (Acceptable Installation)
If the vertical dimension from the hearth is 120” and the horizontal run to the wall flange of the vent termination is 138”, this would be an acceptable installation.

Example B: (Unacceptable Installation)
If the vertical dimension from the hearth is 48” and the horizontal run to the wall flange of the vent termination is 96”, this would not be an acceptable installation.

Example C: (Unacceptable Installation)
If the vertical dimension from the floor of the fireplace is 72” and the horizontal run to the wall flange of the vent termination is 120”, this would not be an acceptable installation.

H38DFST Side Vent Venting Graph

Measure the vertical height from the fireplace hearth to the centre of the termination and the horizontal run from the fireplace flue collar to the wall flange of the termination. Plot on the Venting Graph with an 'X'. If the 'X' falls on or above the top boundary of the shaded area, the installation is acceptable.

Selection of components and details of venting layout should adhere to the following guidelines:

• Vent terminations must not be recessed in walls or siding.
• For Heat Shield requirements see Section 3-3.
• Once the proposed venting layout has been determined refer to graph to ensure the layout is acceptable.

Notes Wall Mounted Terminations: SIDE VENT

• All measurements for vertical or horizontal runs are measured from center of the vent pipe.
• Venting runs must fall within the limits set by the venting graph.

Example A: (Acceptable Installation)
If the vertical dimension from the hearth is 120” and the horizontal run to the wall flange of the vent termination is 138”, this would be an acceptable installation.

Example B: (Unacceptable Installation)
If the vertical dimension from the hearth is 48” and the horizontal run to the wall flange of the vent termination is 96”, this would not be an acceptable installation.

Example C: (Unacceptable Installation)
If the vertical dimension from the floor of the fireplace is 72” and the horizontal run to the wall flange of the vent termination is 120”, this would not be an acceptable installation.

H38DFST Side Vent Venting Graph

Measure the vertical height from the fireplace hearth to the centre of the termination and the horizontal run from the fireplace flue collar to the wall flange of the termination. Plot on the Venting Graph with an 'X'. If the 'X' falls on or above the top boundary of the shaded area, the installation is acceptable.

Selection of components and details of venting layout should adhere to the following guidelines:

• Vent terminations must not be recessed in walls or siding.
• For Heat Shield requirements see Section 3-3.
• Once the proposed venting layout has been determined refer to graph to ensure the layout is acceptable.

Notes Wall Mounted Terminations: SIDE VENT

• All measurements for vertical or horizontal runs are measured from center of the vent pipe.
• Venting runs must fall within the limits set by the venting graph.

Example A: (Acceptable Installation)
If the vertical dimension from the hearth is 120” and the horizontal run to the wall flange of the vent termination is 138”, this would be an acceptable installation.

Example B: (Unacceptable Installation)
If the vertical dimension from the hearth is 48” and the horizontal run to the wall flange of the vent termination is 96”, this would not be an acceptable installation.

Example C: (Unacceptable Installation)
If the vertical dimension from the floor of the fireplace is 72” and the horizontal run to the wall flange of the vent termination is 120”, this would not be an acceptable installation.
Section 3-3-2: H42ST Venting Layout: Wall Mounted Termination

Top Venting Graph

Measure the vertical height from the fireplace hearth to the centre of the termination and the horizontal run from the fireplace flue collar to the wall flange of the termination. Plot on the Venting Graph with an ‘X’. If the ‘X’ falls on or above the top boundary of the shaded area, the installation is acceptable.

Selection of components and details of venting layout should adhere to the following guidelines:
• Vent terminations must not be recessed in walls or siding.
• For Heat Shield requirements see Section 3-3.
• Once the proposed venting layout has been determined refer to graph to ensure the layout is acceptable.

Notes Wall Mounted Terminations: TOP VENT
• All measurements for vertical or horizontal runs are measured from center of the vent pipe.
• Venting runs must fall within the limits set by the venting graph.

Example A: (Acceptable Installation)
If the vertical dimension from the hearth is 120” and the horizontal run to the wall flange of the vent termination is 138”, this would be an acceptable installation.

Example B: (Unacceptable Installation)
If the vertical dimension from the hearth is 48” and the horizontal run to the wall flange of the vent termination is 96”, this would not be an acceptable installation.

Example C: (Unacceptable Installation)
If the vertical dimension from the floor of the fireplace is 72” and the horizontal run to the wall flange of the vent termination is 120”, this would not be an acceptable installation.
Side Venting Graph

Measure the vertical height from the fireplace hearth to the centre of the termination and the horizontal run from the fireplace flue collar to the wall flange of the termination. Plot on the Venting Grap with an 'X'. If the 'X' falls on or above the top boundary of the shaded area, the installation is acceptable.

Selection of components and details of venting layout should adhere to the following guidelines:

• Vent terminations must not be recessed in walls or siding.
• For Heat Shield requirements see Section 3-3.
• Once the proposed venting layout has been determined refer to graph to ensure the layout is acceptable.

Notes Wall Mounted Terminations: SIDE VENT

• All measurements for vertical or horizontal runs are measured from center of the vent pipe.
• Venting runs must fall within the limits set by the venting graph.

Example A: (Acceptable Installation)
If the vertical dimension from the hearth is 120" and the horizontal run to the wall flange of the vent termination is 138", this would be an acceptable installation.

Example B: (Unacceptable Installation)
If the vertical dimension from the hearth is 48" and the horizontal run to the wall flange of the vent termination is 96", this would not be an acceptable installation.

Example C: (Unacceptable Installation)
If the vertical dimension from the floor of the fireplace is 72" and the horizontal run to the wall flange of the vent termination is 120", this would not be an acceptable installation.

Connection and installation of the vent components should adhere to the following guidelines:

- Use any combination of rigid and flex pipe as required and in any orientation (Male connectors can face in any direction).
- Flex sections may be stretched up to 50% of their total length (e.g. a 24" section maybe stretched to 36").
- Connect all vent sections using a minimum of three sheet metal screws on the outer pipe flue.
- Ensure the pipe ends male to female slide in a minimum of 1 1/2" of overlap.
- Ensure all horizontal runs are supported with a minimum of 3 supports per 10' of venting.
- When hanging/supporting venting, ensure that 1" clearance is maintained on sides and bottom of vent runs and 2" above horizontal vent runs to any combustible material.
- Rigid pipe may be cut less than half way from the FEMALE END ONLY.
- Flex pipe cannot be cut
- Ensure when cutting sections of rigid pipe to maintain integrity of internal supports.
- For flex venting, place the springs supplied with the pipe kit, between the outer and inner pipes to keep the pipes separate and avoid any possible hot spots.
- Montigo recommends the use of a flex section for the final pipe connected directly to the fireplace offering greater flexibility of installation and absorption of movement.
- Firestops must be installed as required by National & local codes.

IMPORTANT:

Please Refer to your Building Envelope Engineer or Waterproofing Consultant for a review of ALL penetrations through exterior walls or the roof.

Section 3-3-3: Heat Shields 5"/8"

Installing a Wall Mounted RHS8 heat shield

The RHS8 Heat shield CANNOT be used WITHIN 36" horizontal or 60" vertically of the fireplace, (see figure 18a). For applications within these dimensions the RHS101 Heat Shield MUST be used.

To install the RHS8, frame an opening in combustible construction, Figure 18 below. Slide the Heat shield in place over the vent pipe which attaches to the fireplace. After the fireplace and vent pipe has been installed, clearances should match the dimensions in Figure 18.

![Figure 15.a](image1.png) RHS8 Installation. (Install by sliding over vent pipe where it passes through the combustible construction).

![Figure 15.b](image2.png) RHS8 Installation. (Minimum requirements).

Installing a Wall Mounted RHS101 Heat shield

The RHS101 Heat shield MUST be used where the RHS8 Termination (Figure 18 and 18a) CANNOT be used. Use the RHS100 within 36" horizontal or 60" vertical.

To install the RHS101, Slide the Inner Section over the vent pipe that will connect to the fireplace. Fasten the vent pipe to the back of the fireplace with a Min. of three sheet metal screws.

Next, slide the RHS101 outer section from the outside of the structure. To complete the installation fasten the Heat Shield Outer Section & Termination frame to the structure.

![Figure 15.c](image3.png) RHS101 Installation. (Install by sliding Outer Section over vent pipe where it passes through the combustible construction).

![Figure 15.d](image4.png) Heat Shield. After sliding the outer section in place.

![Figure 15.e](image5.png) RHS101 Installation

**Figure 16.** Wiring diagram for SIT Proflame 2 Electronic Ignition

---

**Installing the remote On/Off Wall Switch**

The gas valve may be connected to a wall switch. Do NOT connect any external power to the remote switch. The valve will generate its own power on a millivolt circuit or will draw its power from an AC Connection inside the fireplace, depending on the model of the unit. Use only low voltage wire, and DO NOT connect any external power to the remote switch. If any of the original wire supplied with the appliance is replaced, it must be replaced with the same type, or its equivalent.

**NOTE:** The switch location must not exceed 30' from the fireplace.

**Figure 16.b** Wiring Diagram for SIT Nova 820 gas and pilot.
CPI [Continuous Pilot Ignition] / IPI [Intermittent Pilot Ignition] Jumper Cable Installation

“Why use CPI mode”?
There are several reasons why you may choose to use CPI mode. When a flue is cold it can be difficult to light the appliance. It can take a bit of time (particularly on tall vents) to initialize vent action. This can result in “lifting” or “ghosting” of the flames during the first two to three minutes of operation. It is also possible to encounter times when the fireplace fails to light successfully. The fireplace will then attempt to re-light a second or third time depending on prevailing temperatures or altitude. When in CPI mode, the pilot also keeps the system warm. During a “cold” start, condensation will normally form on the inner glass surface of the door. This condensation will quickly dry, however, the condensation tends to run down the glass and cause some streaking. CPI mode helps to resolve this issue. If CPI mode is used during the winter months, the energy it takes to run the pilot is partially recovered as heat into the building, so it does not use as much energy as running a pilot in the off season.
A connector is supplied with this unit that can be plugged into the wire harness connected to the controller. This jumper cable gives the Remote Control the ability to operate the CPI / IPI switch and set the unit to operate in either condition. CPI means “Continuous Pilot Ignition” or “Standing Pilot” as it is commonly known. IPI means “Intermittent Pilot Ignition”, which only initializes the pilot when you are going to be using the appliance.

The difference between IPI and CPI:
IPI (Intermittent Pilot Ignition) Mode: is a fuel saving mode in which the pilot is only used when the main burner is on.

CPI (Continuous Pilot Ignition) Mode: The pilot runs continuously even when the main burner is off. (Typically only used for winter months)

Installation of the wall switch
Montigo supplies 14’ of low voltage wire to be plugged into the control board. Connect to a standard single pole ON/OFF switch to the location of your choice. You may extend these wires up to 100’ in length with a wire of equal quality.
Installations in Canada must be electrically grounded in accordance with CSA C22.1 Canadian Electrical Code Part 1 and/or Local Codes. Installations in the USA must be electrically grounded in accordance with local codes or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70.
Optional remote control available through your Montigo Dealer. (RX200**)
Section 5: Installing the gas line

Section 5-1: Fuel Conversion

- Verify that your fireplace is compatible with your available gas type. (Natural Gas or Propane shown by "N" or "L" in your model number
- If gas type is not compatible, contact your local Montigo representative.
- Conversion kits must be installed by a qualified service technician.

Section 5-2: Gas Pressure

- Optimum appliance performance requires proper input pressures.
- Gas line sizing requirements will be determined in ANSI Z223.1/NFPA 54 National Fuel Gas Code in the USA and CAN/CGA B149.1 in Canada.

Pressure requirements (during operation):

<table>
<thead>
<tr>
<th>Pressure Requirement</th>
<th>Natural Gas</th>
<th>Propane</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum inlet pressure</td>
<td>5.5in. w.c.</td>
<td>11in. w.c.</td>
</tr>
<tr>
<td>Manifold pressure</td>
<td>3.5in. w.c.</td>
<td>10in. w.c.</td>
</tr>
</tbody>
</table>

The manifold outlet pressure is set from the factory to the appropriate pressure but should be verified.
- To check pressures, control valves have a provision to remove a 1/8” N.P.T. plug to be fitted with a hose barb.
- Montigo requires a service shut off valve be located in an accessible location to isolate the gas supply.
- Only install gas shut-off valves approved for use by the state, province, or other governing body in which the fireplace is being installed.

Section 5-3: GAS CONNECTION

- Flexible gas connectors must not exceed 3 feet in length, unless allowable within local regulations.
- Connect incoming gas line to the 1/2” or 3/8” gas inlet port.
- Purge all air out of gas line.
- Check appliance connection, valve and valve train under normal operating pressure with a commercially available leak check solution.

DO NOT USE A FLAME OF ANY KIND TO TEST FOR LEAKS.

NOTICE

When pressure testing the fireplace, gas line, and input system follow the appropriate local codes for your area. DO NOT connect the fireplace to pressures in excess of 1/2lb. This will damage the gas control valve.

WARNING

An inspection of the explosion relief flappers and door MUST be made prior to lighting the fireplace. A faulty seal on the door gasket and/or explosion ports will result in products of combustion leaking into the living space and may result in carbon monoxide poisoning.

CAUTION

We recommend careful consideration be given to the effects of elevated mantel temperatures which may be in excess of product design, for example: candles, plastic or pictures. This can cause melting, deformation, discoloration or premature failure of T.V. radio, and other electronic components.

WARNING

Fireplaces cannot be recessed into a wall cavity.
Section 6: Finishing

Mantels & Surrounds
Combustible mantels and mouldings may be safely installed over the top and on the front of the fireplace provided that they do not project beyond shaded area shown.

Fireplace Facing
When sizing the finish material for your fireplace, it is important to remember the following: THE OPENING MUST NOT BE OBSTRUCTED IN ANY WAY - to do so restricts the air supply for the control compartments and heat exchanger it also prevents access for servicing controls.

The face of the fireplace may be painted to match the room decor, provided you use a heat-resistant paint.

Finishing around the fireplace
NOTE: National Canadian Gas Association mantel test requirements are for fire hazard prevention to combustible materials.

Please be aware, temperatures over the mantel will rise above normal room temperature and walls above fireplace may be hot to touch.

NOTE: UNIT CANNOT BE RECESSED INTO A WALL

Side wall clearances are 3". Combustible surrounds may be installed with 3" clearance to the side of the fireplace as shown.

Flush Finishing the Fireplace
A noncombustible finishing material may be installed over the face of the unit as shown below. Please be aware that the temperature of the fireplace face will be extremely hot and could be subject to cracking in seams of concrete board or tile installed directly on the face.

Please refer to the flush face finishing guide for more detailed instructions.
Section 7: Screen Installation and Removal

Removing the Screen
Grasp each top outer corner of the screen with your thumb and finger and pull towards yourself. When the upper Screen Studs are free, lift the screen at an angle from the lower slots from which the Screen Bottom Tabs are held. Place the screen in a safe place.

To Install Screens
Hold the screens at an angle away from the fireplace, and locate the Screen Bottom Tabs at the lower corners of the screen. Place the screen into the Screen Tab Receptacles in the lower section of the fireplace. Make sure the tabs and screens are lowered all the way down into the Screen Tab Receptacles on the fireplace. Then, push each Upper Screen Stud on the top corners of the screen into the Upper Screen Stud Receptacles in the fireplace.

Replacement Screens
For replacement part order numbers, please refer to section "Replacement Parts"

Any safety screen, guard, or barrier removed for servicing an appliance, must be replaced prior to operating the appliance

Glass doors on gas fireplaces are extremely hot while the fireplace is on and remain hot even after the fireplace has been turned off. Safety screens are mandatory while glass is hot and can reduce the risks of severe burns. Please keep children away from the fireplace at all times.
Section 8: Installing & Removing the Door

Removing the door
The doors are removed in a few simple steps. Follow these below to remove the horizontal access panel, unlatch the door buckles and, remove the door. Replace in reverse order.

WARNING
When reinstalling the door(s), always make sure all door buckles are properly hooked and fully engaged.

TOOLS REQUIRED:
- DOOR BUCKLE TOOL
- Door Latch Hook

STEP 1:
Remove the Horizontal valve blind by placing fingers in both finger holes, then pushing away from you and lifting out. Place it aside during maintenance or cleaning. Install in reverse order.

STEP 2:
Locate door buckles

STEP 3:
Firmly grasp handhold end of Door buckle tool and place the machined end in the slot under door frame. (as shown)

STEP 4:
Ensure the tool is firmly in the lower end of the slot, (as shown), then pull toward you.

STEP 5:
Pull hard if necessary to release the spring tension. (Caution: The latch springs back with force, hold the tool securely).

STEP 6:
Remove the tool from the latch slot. Ensure the latches are hanging freely, the hook end is released from the bottom of the door. (Repeat all 4-steps for the remaining latches).

STEP 7:
Grasp the door on either side, usually midway and lift upward, lift the door carefully up and away from the front of the fireplace. Place the door aside in a safe place while maintenance and / or cleaning is being performed.

Reinstalling the door
To install the door, hook the top edge of the door frame into place. Lower the door into position and follow the previous steps shown in reverse order.
Section 9: Installing the Accessories

H38ST Installing the Logs and Embers

STEP 1: Place Logs’ “A” on Left & Right stands.

STEP 2: Place Logs’ “B” as shown, in front of Right-hand “A”, and behind Left-hand “B”.

STEP 3: Log Installation. (Place Logs’ “C” on-top of Logs “A”. Indentations on-top of Logs’ “A”

STEP 4: Completed Installation.

H42ST Installing the Logs and Embers

STEP 1: The two bottom logs (“A” & “B”) are mounted on the burner grate as shown

STEP 2: Log “C” Installation.

STEP 3: Log “D” Installation.

STEP 4: Log “E” Installation.

INSTALLING THE EMBER MATERIAL The ember material is supplied in two packages. Place the material evenly, forward of both Log stands, under logs ‘A’ and ‘B’, also forward from Logs ‘C’ & ‘D’. Refer to figure 25b. Ensure the burner holes are free of ember material after placing the embers.
(Linear Conv.) Installing the Firestones or optional Fireglass

The HL**DF*ST fireplace is supplied with firestones. Remove the Door(s) as shown on page 24. Follow these instructions to ensure all parts are removed or replaced as required. Once the glass door(s) is removed place the firestones randomly across the pan as described.

**Figure 21.** spreading out firestones

**Figure 21.b** Completed firestone installation

**WARNING:** This appliance is intended for use only with the included Montigo burners and accessories. Never install or add any additional or alternative media, rock wool or other material in this appliance. The use of additional or alternative materials may pose potential safety hazards, damage to the appliance, and void manufacturer's warranty.
Section 10: Start up Sequence

For Your Safety - READ BEFORE LIGHTING:

A. This appliance is equipped with an ignition system that lights the pilot burner automatically. Do not attempt to light the pilot by hand.
B. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS:
- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the Fire Department.

Standing (Continuous) Pilot Ignition (SIT NOVA 820)

Lighting Instructions:
1. STOP! Read the safety information above on this label.
2. Lift out the lower horizontal access panel.
3. Push in gas control knob and turn clockwise to "OFF."
4. Wait five (5) minutes to clear out any gas. Smell for gas, including near the floor. If you then smell gas, STOP! Follow "B" in the safety information above on this label. If you don't smell gas, go to the next step.
5. Locate pilot burner (See illustration at right.) and follow steps below.
6. Turn knob on gas control counter clockwise to "PILOT."
7. Push in gas control knob completely and hold. Light with Piezo Igniter button. Continue to hold the control knob in for about (1) minute after the pilot is lit. Release the knob and it will pop back up. Pilot should remain lit. If it goes out repeat steps 3 through 8.
8. If knob does not pop up when released. Stop and immediately call your service technician or gas supplier.
9. If the pilot will not stay lit after several tries, turn the gas control knob to "OFF" and call your service technician or gas supplier.
10. Push in gas control knob and turn counter-clockwise to "ON."

To Turn Off Gas To Appliance:
1. Turn off remote switch.
2. Lift out the lower horizontal access panel.
3. Push in gas control knob slightly and turn clockwise to "Off." Do not force.
4. Replace the lower horizontal access panel.
SIT Proflame 2 Electronic Ignition

For Your Safety - READ BEFORE LIGHTING:

1. STOP! Read the safety information above on this label.
2. Remove the lower Horizontal access panel.
3. Turn "ON" manual "ON/OFF" switch located below the horizontal access panel (if available).
4. Turn the incoming gas control valve to the "ON" position.
5. Wait 5 minutes to clear out any gas. If you smell gas, STOP! Follow "B" in the safety information above on this label. If you don't smell gas, go to the next step.
6. Turn fireplace "ON" using wall switch or remote control.
7. If the Fireplace does not light, the System will cycle through two trials, (one minute audible clicking, thirty seconds of silence, and then another one minute of audible clicking). If the system locks out due to inadequate gas flow, refer to "Troubleshooting" in instruction guide.
8. After completion of the information in the Troubleshooting section, Repeat step 5.
9. If the system will not function correctly, follow the instructions "To Turn Off Gas To Appliance" and call your service technician or gas supplier.

To Turn Off Gas To Appliance:

1. Turn off fireplace using wall switch or remote control.
2. Remove the lower Horizontal access panel.
3. Turn the incoming gas control valve to "Off".
4. Replace the lower Horizontal access panel.
Remote Operation

The Proflame 2 System consists of the following elements:

1. Pilot Assembly
2. Proflame Gas Valve.
3. Proflame 2 Control Module
4. Wiring Harness
5. Variable Speed fans (if applicable)
6. Proflame 2 remote control
7. Battery Pack
8. Manual override switch
9. NOTE: Can not be used with home automation systems.

The Proflame 2 Transmitter controls the following fireplace functions
(all functions may not be available):

1. Main Burner On/Off
2. Main Burner flame modulation (6 levels).
3. Choice of standing or intermittent pilot (CPI/IPI).
4. Thermostat and Smart thermostat functions.
5. Fan speed modulation (6 levels).

The Proflame 2 Transmitter uses a streamlined design with a simple button layout and informative LCD display. A Mode Key is provided to index between the features and a Thermostat Key is used to turn On/Off or index through Thermostat functions, see Figure 27. Additionally, a Key Lock feature is provided.

**WARNING**

Do not expose remote control to temperatures below 0°C (32°F) or above 50°C (122°F)

**CAUTION**

Property Damage Hazard. Excessive heat can cause property damage.
The appliance can stay lit for many hours. Turn off the appliance if it is not going to be attended for any length of time.

**Note:**

SW1 = Programing Button
LED1 = Red Diagnostic Light
LED2 = Amber Programing Remote Control Light

**Figure 27.** Proflame 2 Remote

**Figure 27.a** Proflame 2 Control Module

**Figure 27.c** Remote Control LCD Display
Initializing the System for the first time

1. Set master override switch to off position.
2. Install four (4) AA batteries into the battery holder.
3. Install three (3) AAA batteries in the back of the remote control. Note the polarity of batteries and install them as indicated by the silk screen (+/-) on the holder.
4. Connect AC Power (115 volts, 60 Hz) to fireplace.

Operating the System for the first time

Press SW1 button on the control module. The control module will beep three (3) times and an amber LED is illuminated to indicate that the IFC (control board) is ready to synchronize with a remote control within 10 sec. Push the ON button. The control module will "beep" four (4) times to indicate transmitter’s command is accepted.

The System is now initialized.

Temperature Indication Display

With the system in the "Off" position, press the Thermostat Key and the Mode Key at the same time. Look at the LCD screen on the Remote Control to verify that a C or F is visible to the right of the Room Temperature display.

Turn On the Fireplace

With the system Off, turn the master override switch to on and press the On/Off Key on the Remote Control. The Remote Control display will show some other active Icons on the screen. At the same time the Control Module will activate the fireplace. A single "beep" from the Control Module will confirm reception of the command.

Turn Off the Fireplace

With the system On, press the On/Off Key on the Remote Control. The Remote Control LCD display will only show the room temperature. At the same time the Control Module will turn off the fireplace. A single "beep" from the Receiver confirms reception of the command.
Remote-Flame Control
When you turn on the fireplace it starts on high. The proflame 2 has six (6) flame levels. Each time you press the Down Arrow Key once the flame height will reduce by one step. You can continue this until the main burner flame turns off. You can still operate the accent lights and fans in this mode. If the main burner flame is off and you press the up arrow key once, the flame will automatically go to high.

Room Thermostat (Remote Control Operation)
The Remote Control can operate as a room thermostat. The thermostat can be set to a desired temperature to control the comfort level in a room. To activate the function, press the Thermostat Key, see Figure 27i. The LCD display on the remote control will change to show that the room thermostat is "On" and the set temperature is now displayed. To adjust the set temperature press the Up or Down Arrow Keys until the desired set temperature is displayed on the LCD screen of the Transmitter.

Note: When smart Thermostat is activated, manual flame height adjustment is disabled.

Smart Thermostat (Remote Control Operation)
The Smart Thermostat function adjusts the flame height in accordance to the difference between the set point temperature and the actual room temperatures. As the room temperature gets closer to the set point the Smart Function will modulate the flame down. To activate the function, press the Thermostat Key, see Figure 27j, until the word “SMART” appears to the right of the temperature bulb graphic, see Figure 27j.
Disabling Thermostat

Some jurisdictions and bedroom installations require the thermostat to be disabled.

1. Partially take out one battery, see Figure 27k.
2. Insert the battery while holding down the thermostat button. The remote screen will display ‘Clr’ while the button is held down. See Figure 27l.
3. To enable thermostat repeat steps 1-2. The remote screen will display ‘set’ while the thermostat button is held down.

Fan Speed Control

The fireplace is equipped with optional hot air circulating fans. The speed of the fans can be controlled by the Proflame system. The fan speed can be adjusted through six (6) speeds. To activate this function use the Mode Key, see Figure 27, to index to the fan control icon, see Figure 27m. Use the Up/Down Arrow Keys to turn on, off, or adjust the fan speed. A single “beep” will confirm reception of the command.

Figure 27.k

Figure 27.l

Figure 27.m  Fan Speed Control
Section 10: Cleaning and Maintenance

General
• Have the fireplace and installation inspected yearly. The inspection must include, but is not limited to, the following:
  • A visual check of the entire vent system and termination, where accessible.
  • An inspection of the explosion relief flappers and the door gaskets to ensure a proper seal.
  • An inspection of the burner, vent run, and primary air openings.
  • An inspection of the gas valve, gas components, and pilot flame. For your convenience a 1/8” manifold pressure tap is supplied on the gas valve for a test gauge connection.
  • Inspection of all optional equipment; fans, thermostats, remote control lights, etc.
• For Natural Gas this appliance requires a minimum inlet pressure of 5.5” W.C. and a manifold pressure of 3.5” W.C.
• For Propane Gas this appliance requires a minimum inlet pressure of 11” W.C. and a manifold pressure of 10” W.C.
• Always keep the fireplace area clear and free of combustible materials, as well as gasoline and other flammable vapors and liquids.
• Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.
• Inspection of glass doors and screen for damage and proper installation.

Cleaning
When the fireplace is first activated, there may be some smoke and a visible film may be left on the glass. This is a normal condition, and is the result of burning of protective coatings on new metal.
• Glass must be cleaned periodically to remove any film (which is a normal by-product of combustion) which may be visible. Film can easily be removed by removing the door. Handle the door carefully, and clean it with non-abrasive, non-ammonia based glass cleaners. One of the most effective products is Kel-Kem.
• During the initial firing, Silicone seals will “off gas”, leaving a visual deposit of a white substance on combustion chamber walls. This can easily be removed using normal household products.
• Use a vacuum cleaner or whisk broom to keep the control compartment, burner, and firebox free from dust and lint.

NOTICE
Do not use ammonia or abrasive cleaners on the glass, they will permanently etch the surface. Use an approved gas fireplace cleaner such as Kel-Kem or White off.

Hi-Lo Burner Adjustment: (SIT Nova 820).
The H*34DF* is equipped with an adjustable burner, allowing you to raise or lower the flames. To adjust the flames, locate the black knob marked ‘Hi-Lo’, in the centre of the gas control valve (See Figure 33).
• To raise the flame height, turn the black knob (located behind the lower control compartment) counter-clockwise.
• To lower the flame height, turn clockwise.

Hi-Lo Burner Adjustment: (SIT Proflame 2).
The H*34DF* I is equipped with an adjustable burner, allowing you to raise or lower the flames. To adjust the flames, locate the black knob marked ‘Hi-Lo’, in the centre of the gas control valve (See Figure 34).
• To raise the flame height, turn the black knob (located behind the lower control compartment) counter-clockwise.
• To lower the flame height, turn clockwise.

Figure 28. ‘Hi-Lo’ Adjustment on the SIT Nova 820 gas valve

Pilot Burner Adjustment.
1. Locate Pilot Adjustment Screw. (See figure 33 or 34.)
2. Adjust pilot screw to provide properly sized flame as shown.
3. After installing or servicing, leak test with a soap solution with main burner on. Coat pipe and tubing joints, gasket etc. with soap solution. Bubbles indicate leaks. Tighten any areas where the bubbles appear until the bubbling stops completely.
Troubleshooting SIT Nova 820

The following is a troubleshooting chart of possible problems:

<table>
<thead>
<tr>
<th>PROBLEM</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Noisy Pilot Flame</td>
<td>Locate pilot adjustment screw on gas control valve. Flame is decreased by turning adjustment screw clockwise.</td>
</tr>
<tr>
<td>Pilot won't ignite</td>
<td>Disconnect remote wires and try to light pilot. If pilot now works, remote connections are faulty. Check wiring diagram figure 30.</td>
</tr>
<tr>
<td>Main burner will not light</td>
<td>1. Check wiring (see figure 30)</td>
</tr>
<tr>
<td></td>
<td>2. Check wall switch for proper connection</td>
</tr>
<tr>
<td>Pilot Igniter won't spark</td>
<td>1. Check the MAIN ON-OFF switch (typically located below the valve cover) and turn ON</td>
</tr>
<tr>
<td></td>
<td>2. Ensure main power is ON or new batteries are installed in the remote control and backup battery pack (if available).</td>
</tr>
<tr>
<td></td>
<td>3. Check the 3.15A fuse in the control box and replace if necessary</td>
</tr>
<tr>
<td>Pilot Igniter sparking, but</td>
<td>1. Verify the Inlet and Manifold Gas Pressure are within acceptable limits</td>
</tr>
<tr>
<td>Pilot burner will not light</td>
<td>2. Check all connections to gas valve</td>
</tr>
<tr>
<td></td>
<td>3. Check connection to stepper motor (if available)</td>
</tr>
<tr>
<td>Pilot lights, but Main burner</td>
<td>1. Check and verify all wiring connections as per the wiring diagram.</td>
</tr>
<tr>
<td>will not Light</td>
<td>2. Verify the Inlet and Manifold Pressure are within acceptable limits</td>
</tr>
<tr>
<td>Pilot lights, but Main burner</td>
<td>1. Check the Pilot Flame Sensor Rod and clean with steel wool or similar.</td>
</tr>
<tr>
<td>will not Light and igniter</td>
<td>2. Check the Pilot hood and clean with steel wool if dirty.</td>
</tr>
<tr>
<td>continues to spark</td>
<td>3. Adjust pilot flame using the pilot adjustment screw if the pilot flame is too long or too short (Flame should fully engulf the sensor rod and must be stable).</td>
</tr>
<tr>
<td></td>
<td>4. Check and make sure the ground wire from the pilot is connected to the fireplace body.</td>
</tr>
<tr>
<td>Fans not working</td>
<td>1. Ensure main power is ON (fireplace may be operating on back up batteries).</td>
</tr>
<tr>
<td></td>
<td>2. Check the 3.15A fuse in the control box and replace if necessary</td>
</tr>
</tbody>
</table>

If your fireplace still does not operate correctly, consult your local Montigo dealer.

All service and repairs should be performed by a qualified Technician.

All spare parts, optional fans, and optional trim finishes are available from your local Montigo dealer.

Indoor fireplace in protected outdoor applications

This fireplace may be installed into outdoor locations provided they are suitably protected from direct water impingement. However, all installation clearances in the appliance manual must be observed. Framing, Clearances to Combustibles, Mantel Heights, Facing Requirements, Venting Installation, etc. Use supplied Safety Screen.

<table>
<thead>
<tr>
<th>Dimension &quot;A&quot;</th>
<th>X .75</th>
<th>= min. overhang depth</th>
</tr>
</thead>
<tbody>
<tr>
<td>The overhang must extend at least 75% of the roof line height (A)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Height is measured from bottom of fireplace opening to the ceiling</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Example formula:

\[ \text{Min. overhang} = \text{A} \times 0.75 \]

For example: if distance A is 84", the overhang must extend at least 63".

### Notes
- Overhang requirements must be applied to both the front and sides of the fireplace
- Indoor see-through models cannot be installed as indoor/outdoor fireplaces, as air flows through both sides of the fireplace.
- If the fireplace will be in contact with salt water, then an outdoor fireplace is recommended
- Follow all building codes, including those addressing fireplace penetration of an exterior building envelope

### NOTICE

Units with tempered glass doors are vulnerable to rapid and/or extreme changes in temperature (thermal shock). Take care to prevent water from contacting the fireplace, especially if it is hot.

- Follow all product installation instructions; including framing, clearances to combustibles, mantel heights, Facing Requirements, venting installation, etc. Use supplied safety screen.
- All wiring connections to line power shall be in accordance with outdoor requirements of; NECA NFPA 70 in the USA Canadian Electrical Code, CSA C22.1 for Canada.
- The Fireplace is not to be operated in temperatures below freezing (0°C | 32°F)

</tbody>
</table>

Note 1: For N a vent shall not terminate directly above the sidewalk or paved driveway which is located between two single family dwellings and serve both dwelling.

Note 2: For P only permitted if veranda, porch, deck, or balcony is fully open on a minimum of two sides beneath the floor.

Note 3: For J, K, and L as specified in CGA B149 installation code. Local codes or regulations may vary.

* Based on CGA B149.1 Natural Gas and Propane installation code. Local codes or regulations may vary.

** Based on ANSI Z223.1/NFPA 54 National Fuel Gas Code. Local codes or regulations may vary, please check with local regulatory agency.
Appendix

Appendix B: Warranty

MONTIGO RESIDENTIAL WARRANTY PROGRAM

Canadian Heating Products Inc. and/or Montigo DelRay Corp (collectively referred to herein as “The Companies”), warrants the Montigo gas appliance (referred to herein as ‘the appliance’) to be free from defects in materials and workmanship at the time of manufacture. The gas appliance and related components are further subject to the terms and conditions set forth below.

This warranty covers the following Montigo product series:
- Distinction, Divine & Divine Outdoor (H-Series)
- Illume (FID Inserts)
- Phenom (L/P/PL-Series)
- Exemplar (R/RP-Series)
- Mahana and DelRay

**QUALIFICATIONS TO THE WARRANTY**

This Warranty only covers gas appliances installed in the United States or Canada.

To receive the benefits of this warranty, the appliance must be purchased, installed and serviced annually by a dealer authorized by The Companies for the warranty to be valid.

The gas appliance must be installed by a licensed professional in accordance with The Companies’ installation instructions and local building codes. The warranty on the appliance covers only components manufactured by The Companies. The use of components manufactured or supplied by other manufacturers and used in conjunction with the appliance could create serious safety hazards, which may result in the denial of certification by recognized national safety agencies and could violate local building codes. Such use may untimely void this warranty. This warranty does not cover any damages occurring from the use of any components not manufactured or supplied by The Companies.

The appliance must be subjected to normal use. The appliance is designed to burn natural gas (NG) or liquefied petroleum (LP) only. Burning conventional fireplace fuels such as wood, coal or any other solid fuel will cause damage to the appliance, produce excessive temperatures will result in a fire hazard and void all warranties. This warranty is transferable. The appliance must remain in its original place of installation to be valid.

If the components of the appliance covered by this warranty are found to be defective within the time frame stated (see The Companies investigation of claims), The Companies will, at its option, replace or repair defective components of the appliance manufactured by The Companies at no charge and will also pay for labor costs (in accordance with schedule) incurred in replacing or repairing components. If repair or replacement is not commercially practical, The Companies will, at its sole discretion, fully discharge all obligations under the warranty by refunding the verified dealer purchase price of the appliance, excluding the cost of labor unless the labor is covered by the terms of the warranty.

This warranty covers only parts and labor as provided above. In no case shall the companies be responsible for materials, components or construction, which are not manufactured or supplied by The Companies, or for the labor necessary to install, repair or remove such materials, components or construction. All replacement or repair components will be shipped F.O.B. from the nearest Company factory.

**LIMITATION ON LIABILITY**

It is agreed and understood that The Companies sole obligation, and purchaser’s exclusive remedy under this warranty, under any other warranty, expressed or implied, or in contract, tort or otherwise, shall be limited to repair, replacement or refund as specified above. The opinion of The Companies with respect to these matters shall be final.

In no event shall The Companies be responsible for any incidental or consequential damages caused by (but not limited to) improper installation, installation by an unqualified or unauthorized installer, accident, lack of regular maintenance, user error, abuse, misuse, Acts of God, power surges, floods, natural disasters, force majeure, defects in its appliance whether such damage occurs or is discovered before or after replacement or repair, and whether or not such damage is caused by The Companies negligence. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you. The duration of any implied warranty with respect to the appliance is limited to the duration of the foregoing warranty. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so the above limitation or exclusion may not apply to you.

Appendix B: Warranty Continued

EXCLUSIONS TO WARRANTY
Corrosion or rust of any kind due to a lack of maintenance, inadequate combustion air or improper venting and corrosive chemicals/environments, expansion and contraction of metals or minor movements of components causing noise are not covered by this warranty.

Willful misconduct (i.e. use of the appliance with problems known to the purchaser and causing further damages), including unauthorized or self-performed 'fixing' or exploration of the appliance's internal workings will void the warranty.

Appliances on which the serial number has been altered, defaced, removed or made illegible will void the warranty.

Costs incurred for diagnosis, service work, shipping and handling of defective or replacement parts are not covered under this warranty.

The published warranties are not applicable for any equipment manufactured by The Companies that has been sold direct to the consumer via internet or auction websites. The Companies do not endorse, approve or certify any online sale of its products through auction websites, online retailers or any other method of online sales direct to consumers.

INVESTIGATION OF CLAIMS AGAINST WARRANTY
The Companies reserve the right to investigate any and all claims against this warranty and decide upon method of settlement.

The Companies are not responsible for work done without written consent of The Companies.

The Companies shall in no event be responsible for any warranty work done without first obtaining the Companies written consent.

The Companies employees and dealers have no authority to make any warranties to neither alter this warranty nor authorize any remedies in addition to or inconsistent with those stated within this warranty.

IF WARRANTY SERVICE IS NEEDED
To make a claim under this warranty, contact your installing dealer or contractor. The installing dealer is responsible for providing service and will contact the companies to initiate warranted parts replacements. In the event the installing dealer is unavailable, contact your nearest authorized Montigo dealer (www.Montigo.com) or contact Montigo direct at techsupport@montigo.com. Ensure you have your sales receipt and the model and serial number of your appliance.

DO NOT ATTEMPT TO DO ANY SERVICE WORK YOURSELF
If you cannot locate the installing dealer, or nearest dealer/distributor, you must notify The Companies in writing.
Appendix C: Amendment

(Gas Fireplace / Equipment sold in the State of Massachusetts)

5.08: Modifications to NFPA-54, Chapter 10

1. INSTALLATION OF CARBON MONOXIDE DETECTORS. At the time of installation of the side wall horizontal vented gas fueled equipment, the installing plumber or gas fitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gas fitter shall observe that a battery operated or hard wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors

   a. In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or an attic, the hard wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level.

   b. In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

2. APPROVED CARBON MONOXIDE DETECTORS. Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2042 listed and IAS certified.

3. SIGNAGE. A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2) inch in size, “GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS”.

4. INSPECTION. The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.08(2)(a)1 through 4.

   b) EXEMPTIONS: The following equipment is exempt from 248 CMR 5.08(2)(a)1 through 4:

   1. The equipment listed in Chapter 10 entitled “Equipment Not Required To Be Vented” in the most current edition of NFPA 54 as adopted by the Board; and

   2. Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

   c) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM PROVIDED. When the manufacturer of Product Approved side wall horizontally vented gas equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:

      1. Detailed instructions for the installation of the venting system design or the venting system components; and

      2. A complete parts list for the venting system design or venting system.

   d) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM NOT PROVIDED. When the manufacturer of a Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for venting the flue gases, but identifies “special venting systems”, the following requirements shall be satisfied by the manufacturer:

      1. The referenced “special venting system” instructions shall be included with the appliance or equipment installation instructions; and

      2. The “special venting systems” shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

   e) A copy of all installation instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.

(3) After NFPA-54 section 10.10.4.2 add a new section 10.10.4.3 as follows:

When more than four gas appliances are to be vented through a common gas vent or common horizontal vent manifold, a plan of the proposed vent installation shall be submitted to the Inspector and the serving gas supplier for review and approval.
