The installation of this fireplace must be done by a qualified and certified gas appliance installer.

Check local codes and read all instructions prior to installation.
General

Safety Alert Key

⚠️ DANGER
Indicates a hazardous situation which, if not avoided, WILL result in death or serious injury or property damage.

⚠️ WARNING
Indicates a hazardous situation which, if not avoided, COULD result in death or serious injury or property damage.

⚠️ CAUTION
Indicates a hazardous situation which, if not avoided, WILL result in minor or moderate injury.

NOTICE
Indicates practices that are important, but not related to personal injury.

Introduction

Congratulations on your purchase of a Montigo Fireplace.

This installation guide covers installation of the External Power Vent System only. This system is designed to allow installation of gas fireplaces that cannot be done with a standard Direct Vent gas fireplace installation. Only for use on R-Series, R-Series See-Through and RP-Series that uses the 5/8 venting system.

ONLY USE WITH APPROVED FIREPLACES - see fireplace installation manual.

Read through the fireplace’s installation & maintenance manual, as it must also be adhered to.

Power Cord Harnesses:
The Montigo warranty will be voided by, and Montigo disclaims any responsibility for, the following actions:

- EPVH10 - 10 foot power cord and harness
- EPVH20 - 20 foot power cord and harness
- EPVH40 - 40 foot power cord and harness
- EPVH50 - 50 foot power cord and harness
- EPVH60 - 60 foot power cord and harness
- EPVH80 - 80 foot power cord and harness
- EPVH100 - 100 foot power cord and harness

Figure 1 PV and Termination Specifications

⚠️ CAUTION
When cold air enters the building interior, primarily at the air intake end, condensation may occur on the exterior of the pipe. To limit this condensation, install insulation over the last twenty feet of pipe. Also, by sloping the last 20’ of pipe downwards towards the exterior of the building will help eliminate any condensation problems, should they occur. Ensure the termination is securely fastened and sealed to the pipe. Fasten the termination to the exterior of the building with water tight sealant and the appropriate fasteners.

IMPORTANT:
For vent configurations and power vent locations, refer to fireplace manual.
Section A: Before You Begin

IMPORTANT MESSAGE: SAVE THESE INSTRUCTIONS
The unit must be installed in accordance with these instructions. Carefully read all the instructions in this manual first. Consult the Local Gas Branch to determine the need for a permit prior to starting the installation. It is the responsibility of the installer to ensure this fireplace is installed in compliance with the manufacturers instructions and all applicable codes.

NOTICE
Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control that has been under water.

NOTICE
Due to high temperatures, the appliance should be located out of traffic and away from furniture and draperies.

NOTICE
Children and adults should be alerted to the hazards of high surface temperature and should stay away to avoid burns or clothing ignition.

NOTICE
Clothing or other flammable material should not be placed on or near the appliance.

NOTICE
Installation and repair should be done by a qualified service person. The appliance should be inspected before use and at least annually by a professional service person. More frequent cleaning might be required due to excessive lint from carpeting, bedding material, etc. It is imperative that control compartments, burners, and circulating air passageways of the appliance be kept clean.

Figure 2.d Unit dimensions (Tolerance ± ⅛").
Section 2: Installing the power vent

Power Vent Clearances

Step 1: Unpack the power vent from supplied box.

Step 2: Attach mounting feet by removing screws and tape.
**Step 3:** Power vent cannot be installed closer than 7 feet of venting to the appliance. This is the case whether vertical, horizontal or any combination.

**Step 4:** See Fireplace Manual for approved vent runs. Make sure you have the correct orientation of power vent. One end must face the fireplace and one end must face the termination.

**Step 5:** Remove two screws securing electrical plate. Remove power vent cable from inside component cover.

**Step 6:** Take electrical harness [EPVH-10-100] that will communicate with the power vent, and attach the strain relief for it to the electrical plate. Tighten the nut on the strain relief.

**Step 7:** Attach the power cable from the power vent to the control cable. Push all excess cable back into the component cover. Screw electrical plate back on the power vent.

**Conduit and Wiring Clearances**

Connect the power vent harness as outlined. Connect the wiring to the fireplace as outlined in the schematic shown in Figure 14 Section 3. Ensure that the proper clearances are maintained for the wiring and conduit. When installing the wiring, it must never run above the vent pipe and it must be at least 1" clear of all venting and other hot surfaces.
How to use Diluter Collar

The PVHIN58-300 is equipped with a built-in diluter collar to allow air to bypass the fireplace. This results in slower air movement in the fireplace while still allowing for increased air flow through the power vent and termination, which keeps them cooler. The PVHIN58-300 is shipped with the diluter collar completely closed.

Note: When using the PVHIN58-300 with the RP620, you may not be able to open the diluter collar depending on the vent run. This is not such an issue, as the RP620 has its own bypass built into it which allows for a slower looking flame.

How to Open and Set the Diluter Collar

**Step 1:** Set power vent speed on the control box to full speed.

**Step 2:** Open the diluter collar 100% by turning the diluter collar adjustment screw clockwise until the screw won’t turn anymore. As you turn the screw clockwise, the diluter collar plate will slide along the rails until it stops against the inside of the power vent shell.

**Step 3:** Turn your fireplace on. Likely this diluter collar will be too open to engage the air proving switch.

**Step 4:** Turn the diluter collar screw slowly counter clockwise until the air proving switch is activated. The diluter collar is now set to the minimum adjustment to allow the fireplace to operate. If you have wind issues, or if the fireplace goes out from time-to-time, close the diluter collar more to allow a higher air proving switch signal.
Section 3: TMHIN58-40 Termination

Termination clearances

Step 1: If doing a concrete install, the termination has two adjustable mounting feet on the sides of the termination.

Step 2: If doing a combustible frame install, remove the concrete mounting feet and install as shown.

Step 3: There is an optional vanity ring to cover the unfinished edges of rock facing on the exterior wall around the termination. First, remove the door.

Step 4: To install, place vanity ring around door until vanity ring is flush with surface of door.

Step 5: Clamp ring in place and drill out holes around the perimeter of door.

Step 6: Secure vanity ring with stainless steel screws or rivets. Apply silicone over top of screws or rivets to prevent leaks. Reinstall the door.
Section 3-3-1: Capacitor Replacement - REC 1257

**Step 1:** Remove screws securing blower cover.

**Step 2:** Remove screws securing component cover.

**Step 3:** Cut zap strap securing wires together in bundle. Cut off large bell connector connecting white fibre wire from power cable, black wire from blower and one black wire from capacitor. Cut as little as possible, there is not much space.

**Step 4:** Cut off small bell connector connecting brown wire from blower and the other black wire from capacitor. Unscrew old capacitor and discard. Secure new capacitor in its place.

**Step 5:** Strip about 3/8” to 1/2” off all wire that was cut. Twist brown wire from blower together with the other black wire from capacitor. Using small bell connector supplied, crimp wires together.

**Step 6:** Twist white fibre wire from power cord together with black wire from blower and one black wire from capacitor. Using large bell connector supplied, crimp wires together. Secure wire bundles together.
Step 1: Remove screws securing blower cover.

Step 2: Turn power back on and check blower rotation is counter clockwise.

Step 3: Unplug capacitor / blower assembly from power vent power cable. Unscrew black zap strap anchor / ground wire.

Motor & Capacitor Replace - REC 1258

Step 7: Reinstall component cover. Reinstall blower cover.

Step 2: Remove screws securing component cover.
Step 4: Unscrew capacitor from mounting point. Unscrew blower from power vent. Remove capacitor / blower assembly and discard.

Step 5: Secure blower to Power Vent using supplied screws and star washers. Make sure wire is close to component mounting box.

Step 6: Secure capacitor component mounting bracket. Secure wires and ground screw to Power Vent using supplied black zap strap anchor.

Step 7: Plug capacitor / blower assembly into Power Vent power cord. Reinstall component cover.

Step 8: Reinstall blower cover. Check blower rotation is counter clockwise.

Note 1: For N a vent shall not terminate directly above the sidewalk or paved driveway which is located between two single family dwellings and serve both dwelling.

Note 2: For P only permitted if veranda, porch, deck, or balcony is fully open on a minimum of two sides beneath the floor

Note 3: For J, K, and L as specified in CGA B149 installation code. Local codes or regulations may vary.

* Based on CGA B149.1 Natural Gas and Propane installation code. Local codes or regulations may vary.

** Based on ANSI Z223.1/NFPA 54 National Fuel Gas Code. Local codes may vary, please check with local regulatory agency.
Appendix B: Warranty

MONTIGO RESIDENTIAL WARRANTY PROGRAM

Canadian Heating Products Inc. and/or Montigo DelRay Corp (collectively referred to herein as “The Companies”), warrants the Montigo gas appliance (referred to herein as ‘the appliance’) to be free from defects in materials and workmanship at the time of manufacture. The gas appliance and related components are further subject to the terms and conditions set forth below.

This warranty covers the following Montigo product series: Distinction, H, I, L, Linear P and PL, R and Mahana

QUALIFICATIONS TO THE WARRANTY

This Warranty only covers gas appliances installed in the United States or Canada.

To receive the benefits of this warranty, the appliance must be purchased, installed and serviced annually by a dealer authorized by the Companies for the warranty to be valid.

The gas appliance must be installed by a licensed professional in accordance with The Companies’ installation instructions and local building codes. The warranty on the appliance covers only components manufactured by The Companies. The use of components manufactured or supplied by other manufactures and used in conjunction with the appliance could create serious safety hazards, may result in the denial of certification by recognized national safety agencies and could violate local building codes. Such use may untimely void this warranty. This warranty does not cover any damages occurring from the use of any components not manufactured or supplied by The Companies.

The appliance must be subjected to normal use. The appliance is designed to burn natural gas (NG) or liquefied petroleum (LP) only. Burning conventional fireplace fuels such as wood, coal or any other solid fuel will cause damage to the appliance, produce excessive temperatures will result in a fire hazard and void all warranties. This warranty is transferable. The appliance must remain in its original place of installation to be valid.

If the components of the appliance covered by this warranty are found to be defective within the time frame stated (see The Companies investigation of claims), the companies will, at its option, replace or repair defective components of the appliance manufactured by the company at no charge and will also pay for labor costs (in accordance with schedule) incurred in replacing or repairing components. If repair or replacement is not commercially practical, the companies will, at its sole discretion, provide a current or most like unit, excluding the cost of labor unless the labor is covered by the terms of the warranty.

This warranty covers only parts and labor as provided above. In no case shall the companies be responsible for materials, components or construction. All replacement or repair components will be shipped F.O.B. from the nearest Company factory.

LIMITATION ON LIABILITY

It is agreed and understood that The Companies sole obligation, and purchaser’s exclusive remedy under this warranty, under any other warranty, expressed or implied, or in contract, tort or otherwise, shall be limited to repair or replacement as specified above. The opinion of The Companies with respect to these matters shall be final.

In no event shall The Companies be responsible for any incidental or consequential damages caused by (but not limited to) improper installation, installation by an unqualified or unauthorized installer, accident, lack of regular maintenance, user error, abuse, misuse, Acts of God, power surges, floods, natural disasters, force majeure, defects in its appliance whether such damage occurs or is discovered before or after replacement or repair, and whether or not such damage is caused by The Companies negligence. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you. The duration of any implied warranty with respect to the appliance is limited to the duration of the foregoing warranty. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so the above limitation or exclusion may not apply to you.
Appendix B: Warranty Continued

EXCLUSIONS TO WARRANTY
Corrosion or rust of any kind due to a lack of maintenance, inadequate combustion air or improper venting and corrosive chemicals/environments, expansion and contraction of metals or minor movements of components causing noise are not covered by this warranty.

Willful misconduct (i.e. use of the appliance with problems known to the purchaser and causing further damages), including unauthorized or self-performed ‘fixing’ or exploration of the appliance's internal workings will void the warranty.

Appliances on which the serial number has been altered, defaced, removed or made illegible will void the warranty.

Costs incurred for diagnosis, service work, shipping and handling of defective or replacement parts are not covered under this warranty.

The published warranties are not applicable for any equipment manufactured by The Companies that has been sold direct to the consumer via internet or auction websites. The Companies do not endorse, approve or certify any online sale of its products through auction websites, online retailers or any other method of online sales direct to consumers.

INVESTIGATION OF CLAIMS AGAINST WARRANTY
The Companies reserve the right to investigate any and all claims against this warranty and decide upon method of settlement.

The Companies are not responsible for work done without written consent of The Companies.

The Companies shall in no event be responsible for any warranty work done without first obtaining the Companies written consent.

The Companies employees and dealers have no authority to make any warranties to neither alter this warranty nor authorize any remedies in addition to or inconsistent with those stated within this warranty.

IF WARRANTY SERVICE IS NEEDED
To make a claim under this warranty, contact your installing dealer or contractor. The installing dealer is responsible for providing service and will contact the companies to initiate warranted parts replacements. In the event the installing dealer is unavailable, contact your nearest authorized Montigo dealer (www.Montigo.com) or contact Montigo direct at techsupport@montigo.com. Ensure you have your sales receipt and the model and serial number of your appliance.

DO NOT ATTEMPT TO DO ANY SERVICE WORK YOURSELF
If you cannot locate the installing dealer, or nearest dealer/distributor, you must notify The Companies in writing.

USA Offices
6955 Salashan Parkway
Ferndale WA, 98248
techsupport@montigo.com

Canadian Offices
27342 Gloucester Way
Langley, BC V4W 4A1
techsupport@montigo.com

The terms and conditions of this warranty may be altered or amended from time to time without prior notice.

WARRANTY PERIOD: Warranty coverage begins on the date of original purchase. In the case of new construction, warranty coverage begins on the date of first occupancy of the dwelling or six months after the sale of the product by an independent, authorized Company dealer/distributor, whichever occurs earlier.
Appendix C: Amendment

(Gas Fireplace / Equipment sold in the State of Massachusetts)

5.08: Modifications to NFPA-54, Chapter 10

(1) Revise NFPA-54 section 10.5.4.2 by adding a second exception as follows:

Existing chimneys shall be permitted to have their use continued when a gas conversion burner is installed, and shall be equipped with a manually reset device that will automatically shut off the gas to the burner in the event of a sustained back-draft.

(2) Revise 10.8.3 by adding the following additional requirements:

(a) For all side wall horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than seven (7) feet above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

1. INSTALLATION OF CARBON MONOXIDE DETECTORS. At the time of installation of the side wall horizontal vented gas fueled equipment, the installing plumber or gas fitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gas fitter shall observe that a battery operated or hard wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors.

   a. In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or an attic, the hard wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level.

   b. In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

2. APPROVED CARBON MONOXIDE DETECTORS. Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2042 listed and IAS certified.

3. SIGNAGE. A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2) inch in size, “GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS”.

4. INSPECTION. The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.08(2)(a)1 through 4.

(b) EXEMPTIONS: The following equipment is exempt from 248 CMR 5.08(2)(a)1 through 4:

1. The equipment listed in Chapter 10 entitled “Equipment Not Required To Be Vented” in the most current edition of NFPA 54 as adopted by the Board; and

2. Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

(c) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM PROVIDED. When the manufacturer of Product Approved side wall horizontally vented gas equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:

   1. Detailed instructions for the installation of the venting system design or the venting system components; and

   2. A complete parts list for the venting system design or venting system.

(d) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM NOT PROVIDED. When the manufacturer of a Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for venting the flue gases, but identifies “special venting systems”, the following requirements shall be satisfied by the manufacturer:

   1. The referenced “special venting system” instructions shall be included with the appliance or equipment installation instructions; and

   2. The “special venting systems” shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

(e) A copy of all installation instructions for all Product Approved side wall horizontally vented gas fuelled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.

(3) After NFPA-54 section 10.10.4.2 add a new section 10.10.4.3 as follows:

When more than four gas appliances are to be vented through a common gas vent or common horizontal vent manifold, a plan of the proposed vent installation shall be submitted to the Inspector and the serving gas supplier for review and approval.
