WARNING:

FIRE OR EXPLOSION HAZARD

Failure to follow safety warnings exactly could result in serious injury, death, or property damage.

— Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

— WHAT TO DO IF YOU SMELL GAS
  • Do not try to light any appliance.
  • Do not touch any electrical switch; do not use any phone in your building.
  • Leave the building immediately.
  • Immediately call your gas supplier from a neighbour’s phone. Follow the gas supplier’s instructions.
  • If you cannot reach your gas supplier, call the fire department.

— Installation and service must be performed by a qualified installer, service agency or the gas fitter.

CAUTION

Installation and service must be performed by a qualified installer, service agency or the gas fitter. Check local codes and read all instructions prior to installation.

WARNING:

FIRE OR EXPLOSION HAZARD

Failure to follow safety warnings exactly could result in serious injury, death, or property damage.

— Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

— WHAT TO DO IF YOU SMELL GAS
  • Do not try to light any appliance.
  • Do not touch any electrical switch; do not use any phone in your building.
  • Leave the building immediately.
  • Immediately call your gas supplier from a neighbour’s phone. Follow the gas supplier’s instructions.
  • If you cannot reach your gas supplier, call the fire department.

— Installation and service must be performed by a qualified installer, service agency or the gas fitter.

DANGER

HOT GLASS WILL CAUSE BURNS. DO NOT TOUCH GLASS UNTIL COOLED. NEVER ALLOW CHILDREN TO TOUCH GLASS.

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and must be installed for the protection of children and other at-risk individuals.

WARNING

Some materials used in the manufacturing process of this product can expose you to Benzene which is known in the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65warnings.ca.gov

ENERGUIDE

Look for the EnerGuide Gas Fireplace Energy Efficiency Rating in this brochure

Based on CSA P4.1-15

NOTICE

Installer: Leave this manual with the appliance. Please refer to the Montigo website for the most current version of the fireplace manual

Consumer: Retain this manual for future reference. Please refer to the Montigo website for the most current version of the fireplace manual
Introduction

Congratulations on your purchase of a Montigo Fireplace.

With over 30 years of experience, Montigo is committed to providing you with a gas fireplace that is not only a beautiful addition to your space, but that is also designed and manufactured to the highest safety, reliability and engineering standards.

We strongly encourage you to read and carefully follow the instructions laid out in this Installation, Operation and Maintenance Manual and retain it for your future reference. Pay special attention to all cautions, warnings, and notices throughout this manual intended to ensure your safety.

This manual covers installation, operation and maintenance. Lighting, operation and care of this fireplace can be easily performed by the homeowner. All installation and service work should be performed by a qualified or licensed installer, plumber or gas fitter as certified by the state, province, region or governing body where the fireplace is being installed.

This installation, operation and maintenance manual is applicable to the models described in Table 1. Refer to your rating plate to verify included options.

Warranty and Installation Information: (See Appendix B)

The Montigo warranty will be voided by, and Montigo disclaims any responsibility for, the following actions:

- Modification of the fireplace and/or components including Direct-Vent assembly or glass doors.
- Use of any component part not manufactured or approved by Montigo in combination with this Montigo fireplace system.
- Installation other than as instructed in this manual.
- Consult your local Gas Inspection Branch on installation requirements for factory-built gas fireplaces. Installation & repairs should be done by a qualified contractor.

![Figure 1 DRSQ specifications](image-url)
This appliance may be installed in an aftermarket, permanently located, manufactured home (USA only) or mobile home, where not prohibited by local codes.
This appliance is only for use with the type of gas indicated on the rating plate. A conversion kit is supplied with the appliance.

Section A: Before You Begin

IMPORTANT MESSAGE: SAVE THESE INSTRUCTIONS
The DelRay fireplaces must be installed in accordance with these instructions. Carefully read all the instructions in this manual first. Consult the Local Gas Branch to determine the need for a permit prior to starting the installation. It is the responsibility of the installer to ensure this fireplace is installed in compliance with the manufacturers instructions and all applicable codes.

Installation Checklist

• Determine the desired install location of your fireplace.

• See Section 1, Dimensions on Page 6, and refer to the Framing Section 2 for details.

• Select the location of your termination and resulting vent run.

• Should it be impossible to meet the venting requirements laid out in Section 3: Venting, please contact your Montigo dealer regarding the use of a Montigo Power Vent.

• Lay out the Vent run; calculating the required elbows and straight runs of 5”/8” flex and/or rigid pipe.

• Layout Electrical Requirements refer to Section 4: Wiring, for Details.

• Refer to Section 5: Installing the Gas Line, for details on the gas connection and access.

• Refer to local codes and guidelines for installation requirements.

• Installation and repairs should be done by a qualified contractor and must conform to:

  • Installations in Canada must conform to the local codes or in the absence of local codes to the current version of Natural Gas and Propane Installation Code, CSA B149. Electrical installations must conform to the local codes or, in the absence of local codes, to the current version of Canadian Electrical Code, CSA C22.1.

  • Installations in the USA must conform to the local codes or in the absence of local codes to the current version of National Fuel Gas Code, ANSI Z223.1/NFPA 54. Electrical installations must conform to the local codes or, in the absence of local codes, to the current version of the National Electrical Code, ANSI/NFPA 70. See Appendix C for installation within the State of Massachusetts.

NOTICE

Do not use this appliance if any part has been under water.
Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control that has been under water.

NOTICE

Due to high temperatures, the appliance should be located out of traffic and away from furniture and draperies.

NOTICE

Children and adults should be alerted to the hazards of high surface temperature and should stay away to avoid burns or clothing ignition.

NOTICE

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at-risk individuals.

NOTICE

Clothing or other flammable material should not be placed on or near the appliance.

NOTICE

Installation and repair should be done by a qualified service person. The appliance should be inspected before use and at least annually by a professional service person. More frequent cleaning might be required due to excessive lint from carpeting, bedding material, etc. It is imperative that control compartments, burners, and circulating air passageways of the appliance be kept clean.

This appliance may be installed as an OEM installation in a manufactured home(USA only) or mobile home and must be installed in accordance with the manufacturers instructions and the Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280, in the United States, or the Standard for Installation in Mobile Homes, CAN/CSA Z240 MH, in Canada.

This appliance is only for use with the type(s) of gas indicated on the rating plate. A conversion kit is supplied with the appliance.
# Standard Installation Checklist

This standard installation checklist is to be used by the installer in conjunction with, not instead of, the instructions contained within this installation manual.

</tr>
</tbody>
</table>

\* Clearance from top of fireplace to a ceiling within the fireplace enclosure.

\† Clearance from top of fireplace to a ceiling within the fireplace enclosure.

**WARNING**

When this appliance is installed directly on ANY combustible other than wood flooring (carpet, vinyl, etc.). It must be installed on an equivalent wood or metal panel. This material must extend the full width and depth of the appliance.

**NOTICE**

Clearances must be in accordance with local installation codes and the requirements of the gas supplier.

Montigo offers a variety of direct venting and termination options. The direct vent termination location MUST be selected such that it is the highest point in the venting assembly. It should also be selected such that it provides the shortest vent run possible. Should it be impossible to ensure that the termination is the highest point or to meet the venting guidelines laid out below please contact your Montigo dealer to discuss power venting options.

**Notes For Planning Venting:**

- Venting originates from the top or rear of the unit
- Venting can terminate through the roof or through an exterior wall.
- Refer to Appendix A - Termination Locations to ensure the planned termination location is acceptable.
- Once the termination location has been established, refer to the appropriate section below for installation details
- All fireplaces shipped from the factory are top vent.
- Silicone application is **NOT** required when joining Montigo vent pipes and components.

---

**NOTICE**

Under no circumstances can Montigo flex venting be cut to accommodate an installation. Use an alternative length to complete your vent run. (Excluding flex included in the PVK05, MVK05)

---

**PVK05 (5/8), PVK05F (5/8)**

PVK05 Flex Vent Kit is a standalone 5 ft. vent kit that cannot be combined with Montigo Flex or Montigo Rigid pipe to extend beyond the 5ft of flex included in this kit. The Flex in this kit can be cut down if shortening is required. Any other venting configuration beyond the 5ft included in the kit will require going to either Montigo Rigid pipe or Montigo Flex pipe referenced in the manual pages Venting section.

**PVK05** Includes RHS101 heat shield, 5’ flex pipe (with spacers), and PTO4 termination

**PVK05F (WITH TERM. FRAME)** Includes RHS101 heat shield, 5’ flex pipe (with spacers), and PTO4F termination
Restrictor plate

The fireplace is equipped with a factory installed restrictor set at fully open. If fireplace vent is terminated horizontally, NEVER CLOSE the restrictor completely. Adjust the restrictor opening by judging flame characteristics after 20 minutes of burn time (on cold start, for first few minutes the flames might be blue).

If flames ghost off the burners or if sooting occurs (mostly with propane) open the restrictor fully and work backwards in increments to determine the correct position.

FOR REAR VENT RESTRICTOR MUST BE LEFT FULL OPEN.

FOR POWER VENTED UNITS RESTRICTOR MUST BE CLOSED.

For most runs that include lengths of both horizontal and vertical pipe, especially ones with multiple elbows or long horizontal runs, restrictor should be full open.

Restrictor opening should be adjusted for long vertical lengths with short horizontal runs or vertical only runs to reduce flue draft.

Recommended settings for vertical runs (depends on installation specifics, altitude, fuel and other factors):
- For Verticals 3' to 6' – various between fully open to 1" open
- For Verticals 7' to 10' – 1" open or fully closed
- For Verticals over 10' – fully closed

Primary air adjustment

During initial installation, check primary air opening (below are factory settings):

DRSQ38*I ¼” for NG and ½” for Propane;

DRSQ38*I-2 ¼” for NG and full open for Propane.

The primary air might need adjusting from the factory setting for vertical runs. If flame is sooting, primary air may need to be opened slightly. Smaller primary air opening means yellower flame.

Note: all adjustments to primary air must be made by qualified installers. Very small changes in opening size make major changes in flame appearance.

Depending on desired flame appearance recommended primary air adjustment limits: NG ⅛” – ¼” and propane ⅜” – Full open.
Section 3-3-1: Venting Layout

**DRSQ38 5/8 TOP Venting - Wall and roof termination**

Maximum total vent run allowed is 34 ft. (V+H ≤ 34ft.)
For longer vent runs, a power vent is required
V + H are measured from the center of vent elbows
Elbow may be attached directly to the top of the unit.
Maximum vertical run allowed is 32 ft. (V max).
Maximum horizontal run allowed is 25 ft. (H max).
**Elbows:**
Two 45° elbows = 90° elbow
Each elbow reduces vent run by 3'
Max elbows = 4

---

**Section 3-3-1: Venting Layout**

**DRSQ38 4/7 TOP Venting - Wall and roof termination**

Maximum total vent run allowed is 34 ft. (V+H ≤ 34ft.)
For longer vent runs, a power vent is required
V + H are measured from the center of vent elbows
13° minimum vertical pipe run required
Maximum vertical run allowed is 32 ft. (V max).
Maximum horizontal run allowed is 25 ft. (H max).
**Elbows:**
Two 45° elbows = 90° elbow
Each elbow reduces vent run by 3'
Max elbows = 4

---

*4" vertical minimum is based on the vent center of an elbow mounted directly on the top of the unit.*
**DRSQ38 Rear Venting**

A maximum 18” of horizontal run is allowed on rear vented applications, though the addition of a 45° elbow is permitted for corner installations.

**REAR VENTING NOT PERMITTED FOR 4/7 VENTING.**

**Figure 9.b** Straight run, Rear Vented, wall mounted termination.

---

**45° Corner Installation 5”/8”**

Attach an EEL-45 (45° elbow) directly onto the flue collar and attach it to the EEL-45, cut the MXT-20 to suit. Slide the fireplace into position and attach to the termination.

**45° or less Corner Installation 5”/8”**

Use an PTO-4 termination and an PFL-1 or PFL-2/PFL-2 (12” or 24” compressed length) and a frame, if appropriate. Flex may be turned to obtain desired degree of angle required but must not exceed 45°.

**NOTE:** The PVK05 / PVK05F kit can be also be used

---

**NOTICE**

Corner installation is available for **NATURAL GAS UNITS ONLY**
Co-linear venting into existing masonry chimney

The appliance can be adapted to co-linear applications using an existing chimney. The appliance must not be connected to a chimney flue serving a separate solidfuel burning appliance such as a wood burning fireplace.

- Maximum 30 feet vertical pipe
- Minimum 10 feet vertical
- Restrictor usage recommended for longer vertical runs
- Keep the flexible liner as straight as possible, avoid unnecessary bending
- A maximum of two certified couplers may be used per length of 3” liner
- DelRay Square co-linear installation requires reducing from 5/8 to Duravent 4x6⅝ (Alternatively, 46DVA-AD-M1 adaptor could be used with DRSQCOL47 collar conversion)

**NOTICE**

The unit must be fully enclosed while maintaining clearances to combustibles detailed elsewhere in this manual.
Section 3-2: Installing a Roof Mounted Direct Vent Termination

This section applies to installations where the direct vent termination will be roof mounted.

Section 3-2-1: Venting Layout

Selection of components and details of venting lay out should adhere to the following guidelines:

- The maximum termination point is 34’ above the fireplace (NOTE: if the maximum termination height is used, the flame pattern may be affected).
- The Vertical termination must be a minimum 2’ higher than where the termination exits the roofing materials, (asphalt shingles, cedar shakes, etc). This distance should be measured from the high side of the roof slope where the flue flashing intersects the roofing materials.
- See Appendix A for termination locations.
- For a more detailed diagram of allowed termination locations, see Appendix A.
- A maximum of two offsets (each offset is made up of 2-90° bends) may be made for vertical vent runs.
- Firestops must be installed as required by National & local codes.
- Ensure all horizontal runs are supported with a minimum of 3 supports per 10’ of venting.
- Install all roof flashing and storm collars as shown.
Section 3-3: Installing a Wall Mounted Termination

This section applies to installations where the direct vent termination will be wall mounted. **NOTE:** If subject to a highly corrosive environment i.e. Seaside, Montigo recommends using Stainless Steel Termination.

**Installation of termination with built in frame**
A termination with a built-in frame is installed during framing of a structure.
1. Frame the termination opening to 11" x 11".
2. Install exterior sheathing to the structure framing.
3. Fasten the termination to the sheathing using a minimum of 4 screws.

**Installation of termination frame at time of framing**
Terminations with a MSR frame allow the installation of the frame prior to installation of the termination.
1. Frame the termination opening to 12" x 12".
2. Secure the MSR Frame to the exterior sheathing of the structure.
3. Fasten the termination to the MSR Frame using a minimum of 4 screws.

**Installation of termination frame at time of framing in masonry**
Terminations with a BSR frame allow the installation of the frame in masonry prior to the installation of the termination.
1. Frame the BSR opening to 12" x 12".
2. Secure the BSR Frame to the exterior sheathing of the structure.
3. Fasten the termination to the BSR Frame using a minimum of 4 screws.

**Installation of termination from inside structure**
A Termination with a MOSR Frame is installed from the inside of the structure. These are commonly used in high-rise construction.
1. Frame the MOS opening to 12" x 12".
2. Fasten the MOSR frame to the interior side of the studs, concrete, or finished wall construction using a minimum of 4 screws.
3. Insert the termination into the MOSR frame as shown here, (from the inside) and attach to the MOSR by installing a min. quantity of 4 bolts into the threaded nuts on the MOSR Frame.

**Installation of a termination shield for vinyl siding**
The VSS Termination shield is installed when the exterior of a structure is clad with Vinyl siding. It is placed directly above, and on-center with the termination.

**Installing heat guards**
Installing heat guards over terminations is recommended in installations where the termination is located within 7' feet above grade, or above a pedestrian walkway, and may be required by code in public areas.
1. Ensure that the two long mounting brackets are facing the bottom of the termination (See inset). This will provide more heat protection at the top of the termination, where temperatures are highest.
2. Attach to the faceplate of the termination using four sheet metal screws.
Montigo supplies a variety of direct venting and termination options. The direct vent termination location MUST be selected such that it is the highest point in the venting assembly. It should also be selected such that it provides the shortest vent run possible. Should it be impossible to ensure that the termination is the highest point or to meet the venting guidelines laid out below please contact your Montigo dealer to discuss power venting options.

Notes For Planning Venting:
- Venting can originate from the unit through the top or through the rear
- Venting can terminate through the roof or through an exterior wall.
- Refer to Appendix A - Termination Locations to ensure the planned termination location is acceptable.
- Once the termination location has been established, refer to the appropriate section below for installation details
- All fireplaces shipped from the factory are top vent.
- Silicone application is NOT required when joining Montigo vent pipes and components.

Section 3-1: Converting top/rear vent

Use the following instructions to convert a unit for rear vent use:
- Remove the rear flue cover and gasket on the flue outlet.
- Next, Remove the Top flue collar's on the flue outlet.
- Install the (removed) rear flue cover and gasket material, to the Top vent outlet. Fasten the cover with included hardware.
- Install the collars to the rear vent outlet using the included hardware.

Connection and installation of the vent components should adhere to the following guidelines:
- Use any combination of rigid and flex pipe as required and in any orientation (Male connectors can face in any direction).
- Flex sections may be stretched up to 50% of their total length (e.g. a 24” section maybe stretched to 36”).
- Connect all vent sections using a minimum of three sheet metal screws on the outer pipe flue.
- Ensure the pipe ends male to female slide in a minimum of 1 1/2” of overlap.
- Ensure all horizontal runs are supported with a minimum of 3 supports per 10’ of venting.
- When hanging/supporting venting, ensure that 1” clearance is maintained on sides and bottom of vent runs and 2” above horizontal vent runs to any combustible material.
- Rigid pipe may be cut less than half way from the FEMALE END ONLY.
- Ensure when cutting sections of rigid pipe to maintain integrity of internal supports.
- Flex pipe cannot be cut
- Place the springs, supplied with the pipe kit (flex only), between the outer and inner pipes to keep the pipes separate and avoid any possible hot spots.
- Montigo recommends the use of a flex section for the first section of venting connected directly to the fireplace, offering greater flexibility of installation and absorption of movement.
- Firestops must be installed as required by national & local codes.
- Montigo recommends that all exterior corners and joints be sealed with exterior caulking. However, we encourage you to consult your Building Envelope Engineer or Waterproofing Consultant for further recommendations.

Figure 7. Flue cover and collar removal and install, Top Vented fireplace.
### Section 3-3-2.2: Alternate Venting Components 5"/8"

Section 3-3-3: Heat Shields

Installing the included heat shield
The included Heat shield CANNOT be used WITHIN 36" horizontal or 60" vertically of the fireplace. For applications within these dimensions the RHS10* Heat Shield MUST be used.

To install the heat shield frame an opening in combustible construction. Slide the Heat shield in place over the vent pipe which attaches to the fireplace. After the fireplace and vent pipe has been installed, clearances should match the dimensions shown.

Installing a Wall Mounted Heat shield
The RHS10* Heat shield must be used if vent pipe passes through a wall or ceiling within 6’ of the unit.

To install the Heat shield, Slide the Inner Section over the vent pipe that will connect to the fireplace. Then fasten the vent pipe to the back of the fireplace with a minimum of three sheet metal screws. From the outside slide the outer section on. To complete the installation fasten the Heat Shield Outer Section & inner section to the structure.

**Figure 15.** Wiring diagram for DRSQ38*I with SIT Proflame Electronic Ignition

**Installation of the wall switch**

Montigo supplies 15’ of low voltage wire to be plugged into the control board. Connect to a standard single pole ON/OFF switch to the location of your choice. You may extend these wires up to 30’ in length with a wire of equal quality.

Installations in Canada must be electrically grounded in accordance with CSA C22.1 Canadian Electrical Code Part 1 and/or Local Codes. Installations in the USA must be electrically grounded in accordance with local codes or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70.

Optional remote control available through your Montigo Dealer.
### Installation of Electrical Supply

Installations in Canada must be electrically grounded in accordance with CSA C22.1 Canadian Electrical Code Part 1 and/or Local Codes. Installations in the USA must be grounded in accordance with local codes or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70.

NOTE: If any of the original wire supplied with the appliance is replaced, it must be replaced with the same type, or its equivalent.

---

**Figure 15b.** Wiring diagram for DRSQ38*I-2 with SIT Proflame Electronic Ignition
Section 5: Installing the gas line

Fuel Type

• Verify that your fireplace is compatible with your available gas type. (Natural Gas or Propane shown by “N” or “L” in your model number
• If gas type is not compatible, contact your local Montigo dealer.

Gas Pressure

• Optimum appliance performance requires proper input pressures.
• Gas line sizing requirements will be determined in ANSI Z223.1/NFPA 54 National Fuel Gas Code in the USA and CAN/CGA B149.1 in Canada.

Pressure requirements (during operation):

<table>
<thead>
<tr>
<th>PRESSURE REQUIREMENTS</th>
<th>Natural Gas</th>
<th>Propane</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum inlet pressure</td>
<td>5.5 in. w.c.</td>
<td>11 in. w.c.</td>
</tr>
<tr>
<td>Manifold pressure</td>
<td>3.5 in. w.c.</td>
<td>10 in. w.c.</td>
</tr>
</tbody>
</table>

Figure 17. Pressure Requirements

• The manifold outlet pressure is set from the factory to the appropriate pressure but should be verified.
• To check pressures, control valves have a provision to remove a 1/8” N.P.T. plug to be fitted with a hose barb.
• Montigo requires a service shut off valve be located in an accessible location to isolate the gas supply.
• Only install gas shut-off valves approved for use by the state, province, or other governing body in which the fireplace is being installed.

Section 5-3: GAS CONNECTION

• See Figure 20.b or 20.c for location of gas line access.
• Flexible gas connectors must not exceed 2 feet in length, unless allowable within local regulations.
• Connect incoming gas line to the 1/2” or 3/8” gas inlet port.
• Check appliance connection, valve and valve train under normal operating pressure with a commercially available leak check solution.

DO NOT USE A FLAME OF ANY KIND TO TEST FOR LEAKS.

DANGER

After gas line is connected, each appliance connection, valve and valve train MUST be checked while under normal operating pressure with either a Liquid Solution, or Leak Detection Device, to locate any source of leak. Tighten any areas where bubbling appears or a leak is detected until bubbling stops completely or leak is no longer detected. DO NOT use a flame of any kind to test for leaks. A fire or explosion will occur, causing serious injury, property damage or death.

WARNING

An inspection of the explosion relief flappers and door MUST be made prior to lighting the fireplace. A faulty seal on the door gasket and/or explosion ports will result in products of combustion leaking into the living space and may result in carbon monoxide poisoning.

Finishing Safety Zone

Take special care when finishing underneath the fireplace door due to the location of the gas valve and control board. Any screw can possibly puncture one of these components resulting in either a non operational unit or worse, a gas leak.

NOTICE

When pressure testing the fireplace, gas line, and input system follow the appropriate local codes for your area. DO NOT connect the fireplace to pressures in excess of 0.5 psig (14” w.c.) This will damage the gas control valve.
Section 6: Finishing

Finishing Around the Fireplace

Fireplace Facing
When sizing the finish material for your fireplace, it is important to remember the following: THE OPENING MUST NOT BE OBSTRUCTED IN ANY WAY - to do so restricts the air supply for the control compartments and it also prevents access for servicing controls.

Sidewall clearances
Side wall clearances are 4". Combustible surrounds may be installed with 4" clearance to the side of the fireplace as shown.

Figure 17.b Sidewall clearances

Notices
4" clearance in sidewall drawing does not apply to recession, unit cannot be recessed into a wall.

Cement Board Install
Install the supplied non-combustible cement board to overlap the new horizontal & vertical 2 x 4's, place the non-combustible wall board above the fireplace throat, allowing 1/8" clearance from the rim above the fireplace opening. Pre-drill the board with 1/8" drill bit and secure to framing with nails, use flat head sheet metal screws to fasten the board to the metal header.

Dimensions
Top (Qty 1) 43" x 15.9"
Bottom (Qty 1) 43" x 7.09"
Sides (Qty 2) 4.56" x 23.03"

CAUTION
We recommend careful consideration be given to the effects of elevated mantel temperatures which may be in excess of product design, for example: candles, plastic or pictures. This can cause melting, deformation, discoloration or premature failure of T.V. radio, and other electronic components.

WARNING
Fireplaces cannot be recessed into a wall cavity.
Elevated surface temperatures

The below are surface temperatures of the area above the fireplace opening after a 3 hour burn period. Use this guide in good faith to decide on an appropriate facing material and mantle. A cool wall kit can aid in lowering surface temperatures as shown. Tests are based off a 24,000 BTU NG unit.

Standard installation

16" above opening = 150°F
12" above opening = 160°F
8" above opening = 180°F
4" above opening = 200°F

IMPORTANT
Every install requires the installation of the included cement board. Temperatures are based off of the minimum enclosure size.

Venting ports open w/ vented chase

16" above opening = 100°F
12" above opening = 110°F
8" above opening = 130°F
4" above opening = 140°F

IMPORTANT
Leaving the venting ports open requires a minimum chase height of 8’ and a chase opening of at least 100² inches.

Combustible surround flush to opening (requires standard cement board)

Heat distribution kit installed

16" above opening = 100°F
12" above opening = 110°F
8" above opening = 130°F
4" above opening = 140°F

IMPORTANT
Heat distribution kits can be either the form of a sidewalk kit or a TV kit. Both require HDKPDFK-1 5” flex kit (12’ length)

TV KIT
TV recess requires use of a heat distribution kit

Combustible surround flush to opening (requires standard cement board)
Remote Operation (Full load DelRay Square)

The Proflame 2 System consists of the following elements:

1. Pilot Assembly
2. Proflame Gas Valve.
3. Proflame 2 Control Module
4. Wiring Harness
5. Variable Speed fans
6. Downlighting
7. Proflame 2 remote control
8. Battery Pack

NOTE: Can not be used with home automation systems.

The Proflame 2 Transmitter controls the following fireplace functions:

1. Main Burner On/Off
2. Choice of standing or intermittent pilot (CPI/IPI).
3. Thermostat and Smart thermostat functions.
4. Halogen downlighting
5. Fan speed modulation (6 levels).

The Proflame 2 Transmitter uses a streamlined design with a simple button layout and informative LCD display. A Mode Key is provided to index between the features and a Thermostat Key is used to turn On/Off or index through Thermostat functions, see Figure 26. Additionally, a Key Lock feature is provided.

**WARNING**

Do not expose remote control to temperatures below 0°C (32°F) or above 50°C (122°F)

**CAUTION**

Property Damage Hazard. Excessive heat can cause property damage.

The appliance can stay lit for many hours. Turn off the appliance if it is not going to be attended for any length of time.

**WARNING**

Battery operated device. Read the battery instructions before installing them into the system. Do not expose any battery, or its holder, or a device in which batteries are installed, to a working temperature greater than 54°C / 129°F

---

*Figure 29. Proflame 2 Remote*

*Figure 29.b. Proflame 2 Control Module*

*Figure 29.c. Remote Control LCD Display*
Initializing the System for the first time
1. Set master override switch to off position.
2. Install four (4) AA batteries into the battery holder.
3. Install three (3) AAA batteries in the back of the remote control. Note the polarity of batteries and install them as indicated by the silk screen (+/-) on the holder.
4. Connect AC Power (115 volts, 60 Hz) to fireplace.

Operating the System for the first time
Press SW1 button on the control module. The control module will beep three (3) times and an amber LED is illuminated to indicate that the IFC (control board) is ready to synchronize with a remote control within 10 sec. Push the ON button. The control module will "beep" four (4) times to indicate transmitter’s command is accepted.
The System is now initialized.

Temperature Indication Display
With the system in the "Off" position, press the Thermostat Key and the Mode Key at the same time. Look at the LCD screen on the remote control to verify that a C or F is visible to the right of the Room Temperature display.

Turn On the Fireplace
With the system Off, turn the master override switch to on and press the On/Off Key on the Remote Control. The Remote Control display will show some other active icons on the screen. At the same time the Control Module will activate the fireplace. A single “beep” from the Control Module will confirm reception of the command.

Turn Off the Fireplace
With the system On, press the On/Off Key on the Remote Control. The Remote Control LCD display will only show the room temperature. At the same time the Control Module will turn off the fireplace. A single “beep” from the Receiver confirms reception of the command.

Accent Light Control
The fireplace is equipped with variable accent lights. The accent light function controls the Accent Lights. To activate this function use the Mode Key, see Figure 8 Sec.10, to index to the accent light icon.
Pressing the Up Arrow Key will turn the light on at the lowest setting. Continue pressing up to get brighter. Pressing the Down Arrow Key will turn the lights down until you get to the off position. A single beep will confirm the reception of the command.
Room Thermostat (Remote Control Operation)

The Remote Control can operate as a room thermostat. The thermostat can be set to a desired temperature to control the comfort level in a room. To activate the function, press the Thermostat Key, see Figure 27i. The LCD display on the remote control will change to show that the room thermostat is "On" and the set temperature is now displayed. To adjust the set temperature press the Up or Down Arrow Keys until the desired set temperature is displayed on the LCD screen of the Transmitter.

Smart Thermostat (Remote Control Operation)

The Smart Thermostat function adjusts the flame height in accordance to the difference between the set point temperature and the actual room temperatures. As the room temperature gets closer to the set point the Smart Function will modulate the flame down. To activate the function, press the Thermostat Key, see Figure 27j, until the word "SMART" appears to the right of the temperature bulb graphic, see Figure 27j.

NOTE: When smart Thermostat is activated, manual flame height adjustment is disabled.

Disabling Thermostat

Some jurisdictions and bedroom installations require the thermostat to be disabled.

1. Partially take out one battery. Insert the battery while holding down the thermostat button. The remote screen will display 'Clr' while the button is held down.
2. To enable thermostat repeat steps 1-2. The remote screen will display 'set' while the thermostat button is held down.

Fan Speed Control

The fireplace is equipped with optional hot air circulating fans. The speed of the fans can be controlled by the Proflame system. The fan speed can be adjusted through six (6) speeds. To activate this function use the Mode Key, see Figure 27, to index to the fan control icon, see Figure 27m. Use the Up/Down Arrow Keys to turn on, off, or adjust the fan speed. A single "beep" will confirm reception of the command.
Section 8: Removing & Installing the Screen / Door

Removing the Screen
Follow the steps below to remove, or install the fireplace screen and door. Before beginning any screen or glass removal, make sure that the unit has not been in operation and that it is at room temperature.

**Step 1:** Locate the three tabs at the base of the screen.

**Step 2:** Lift out the Retaining Tabs and screen.
Pull the bottom of the screen upward then outward, then slide out the screen from the frame.
Store in a safe place. The Screen is very fragile and can be easily torn, dented or deformed. Refer to Figure 20.b below.

Reinstalling the Screen
Follow the two previous steps to re-install the fireplace window.

**NOTICE**
Any safety screen, guard, or barrier removed for servicing an appliance, must be replaced prior to operating the appliance.

Removing the door
The door is removed in a few simple steps. Follow these steps below to unlatch the door buckles and remove the door.

**STEP 1:**
Remove lower valve blinds and screen setting bar.

**STEP 2:**
Ensure the tool is firmly in the lower end of the slot, (as shown), Then pull toward you, door will unlatch, repeat for other buckle.

**STEP 3:**
Pull the top of the door towards you, then lift the door up and out of the fireplace frame.
Store in a safe place.

Reinstalling the door
NOTE: Make sure the top and base of the door slips into the narrow channel in the frame to ensure proper placement.

**STEP 1:**
Push the bottom of the door into the door frame channel. push the top of the door into place below the buckles.

**STEP 2:**
Buckles are locked into place by pulling out and up, latch will pop into place.
Propane Conversion

To convert the DelRay from Natural Gas to Propane, install the GCA020 / GCA021 conversion kit. The unit must be disconnected from any gas supply, disconnected from any electrical supply and batteries and removed from any installation cavity.

1. Shut off gas supply.

2. Remove the 2 screws securing the pilot cover to the media tray.

3. Burner can now be removed by simply lifting up.

4. Use 3/8" wrench to loosen off the NG gas orifice, replace with Propane orifice as included in package.

5. Using a Philips screwdriver, loosen the screw on the primary air adjuster. Adjust opening to ½" if you have a DRSQ38NI and using the conversion kit GCA020. Adjust opening to fully open if you have a DRSQ38NI-2 and using the conversion kit GCA021.

Tools required
1. Torx T20 Screw Driver Bit
2. 1/2" Socket Driver
3. 5/32" Allen Key
4. Needle Nose Pliers or Small Flat Head Screw Driver
5. 3/8" wrench

Parts included
1. Propane burner orifice
2. Propane pilot orifice
3. Propane valve control (with mounting screws)
4. Valve conversion label
5. Conversion plate label
6. Conversion technician identifying label

For input rating, manifold pressure and orifice size, refer to sample rating plate

⚠️ WARNING

This conversion kit shall be installed by a qualified gas fitter in accordance with the manufacturer's instructions and all applicable codes and requirements of the authority having jurisdiction. If the information in these instructions is not followed exactly, a fire, explosion or production of carbon monoxide may result causing property damage, personal injury or loss of life. The qualified service agency is responsible for the proper installation of this kit. The installation is not proper and complete until the operation of the converted appliance is checked as specified in the manufacturer's instructions supplied with the kit.

⚠️ CAUTION

The gas supply shall be shut off prior to disconnecting the electrical power, before proceeding with the conversion.
6. Use screwdriver to carefully detach spring clip from the pilot hood.

![Figure 13.d Removing the spring clip]

7. Remove the pilot hood and use the 5/32" allen key to remove the natural gas pilot orifice, and replace with propane pilot orifice.

![Figure 13.e Removing the pilot hood, orifice]

8. Reassemble pilot assembly and hood.

9. See regulator instructions for guide on converting the pressure regulator gasket.

![Figure 13.ee LP pressure regulator on Basic]

10. If necessary, pilot flame size can be adjusted using a flathead screwdriver to adjust “pilADJ” screw shown

![Figure 13.g Adjust pilot size]

11. The manifold and inlet pressure can be verified by using a manometer and a 1/8” rubber hose attached to the valve ports shown here (top is manifold, bottom is inlet) Use a soap-based leak testing solution on the valve regulator while the unit is operating to check for any leaks.

![Figure 13.h Adjust pressure ports]

12. Fill out required information on Propane conversion gas fitter sign off label, attach to reverse side of rating plate. Attach Rating plate conversion label to rating plate label. Place Valve conversion label on valve face.

![Figure 13.i Label reverse rating plate]

![Figure 13.j Conversion label on valve]
Section 9: Installing the Accessories

The DelRay Square Universal burner
The burner for the DelRay Square has been developed in a way that equally supports contemporary and traditional scenes without the need for a burner swap.

Installing glass media
Optional fireglass may be purchased from the dealer. Remove the Door as shown in the previous instruction. Once the glass door is removed, place the firestones randomly across the pan and the burners.

**NOTE:** ONLY COVER THE BURNER WITH ONE LAYER OF FIRESTONES OR FIREGLASS.
*DRSQ38 only use 4.5lb of firestones*

Installing a contemporary scene 
(glass and stone)
The combination of a glass firebed with stones places around the burner ports provide the best contemporary burn scene in terms of flame height and flame density. Place the fireglass as directed in the previous section, then the included stones can be placed as shown provided they don’t cover the burner ports.

Installing the speckled stone media
Optional speckled stone media may be purchased from the dealer. Remove the Door as shown in the previous instruction. Once the glass door is removed place the firestones randomly across the pan and the burners.

Note: Only cover the burner with one layer.
Only cover the burner with one layer of coals. Arrange the ember chips on top of the burner tray. DO NOT cover the pilot with logs.

**WARNING:** This appliance is intended for use only with the included Montigo burners and accessories. Never install or add any additional or alternative media, rock wool or other material in this appliance. The use of additional or alternative materials may pose potential safety hazards, damage to the appliance, and void manufacturer’s warranty.

### Split Oak Logset Installation

**Step 1:** Log A is placed at the rear center of the media tray. Log B is placed at the left corner of the firebox, with the charred side facing the middle of the media tray.

**Step 2:** Log E is placed at the right corner of the firebox, with the charred side facing the middle of the media tray.

**Step 3:** Place log H diagonally in front of log a, in the center of the media tray.

**Step 4:** Log I rests diagonally on log H with the other end resting on log E.

**Step 5:** Log F is placed diagonally directly in front of log B, with the forked end down. Log C is placed diagonally on log E, charred end down.

**Step 6:** Rest log G horizontally next to log F.

**Step 7:** Place log D on top of log E, charred end in.
Only cover the burner with one layer of coals. Arrange the ember chips on top of the burner tray. DO NOT cover the pilot with logs.

**WARNING:** This appliance is intended for use only with the included Montigo burners and accessories. Never install or add any additional or alternative media, rock wool or other material in this appliance. The use of additional or alternative materials may pose potential safety hazards, damage to the appliance, and void manufacturer’s warranty.

### Birch Logset Installation

#### Step 1: Log A is placed at the rear center of the media tray

#### Step 2: Log B is placed at the right corner of the firebox, with the charred side facing the middle of the media tray

#### Step 3: Place log C at the left corner of the firebox, with the charred side facing the middle of the media tray

#### Step 4: Log D rests diagonally on log C with the other end resting in the middle of the media tray

#### Step 5: Log E is placed diagonally directly in front of log B

#### Step 6: Rest log F horizontally between logs C and E

#### Step 7: Place log G underneath log E in front of the pilot
Install fluid with one layer of coals. Arrange the ember chips on top of the burner tray. DO NOT cover the pilot with logs.

**WARNING:** This appliance is intended for use only with the included Montigo burners and accessories. Never install or add any additional or alternative media, rock wool or other material in this appliance. The use of additional or alternative materials may pose potential safety hazards, damage to the appliance, and void manufacturer’s warranty.

---

**Driftwood Logset Installation**

**Step 1:** Log A is placed at the rear center of the media tray

**Step 2:** Log B is placed at the left corner of the firebox, with one end resting on log A

**Step 3:** Place log C over the pilot with the end resting on log A

**Step 4:** Log D is placed in front of the pilot underneath log C

**Step 5:** Log E is placed diagonally directly in front of log B

**Step 6:** Rest log F on logs A and C

**Step 7:** Place log G underneath the end on log E with the other end resting in the middle of the tray
Black Reflective Glass
Before beginning any install, make sure that the unit has not been in operation and that it is at room temperature.

Step 1: Identify correct bracket to use.

Step 2: Remove the two screws on each side where the brackets will go in

Step 3: Put the back glass on first, and temporarily hold it in place using masking tape. Don’t use regular tape as it will leave residue on the glass

Step 4: Bend the left side tab on the bracket. Place right side glass in place, and secure with the bracket using screw
Bend the right side tab on the bracket. Place left side glass in place, and secure with the bracket using screw.

Step 5: It is now safe to remove the masking tape.
Brick Liner Install

Before beginning any install, make sure that the unit has not been in operation and that it is at room temperature.

**Step 1:** Remove the two screws on each side where the brackets will go in

**Step 2:** Put the back panel in first, and temporarily hold it in place or use masking tape. Don’t use regular tape as it will leave residue on the panel.

**Step 3:** Use the included clips to secure right panel into the screw hole referenced in step 1.

**Step 4:** Install left panel using same steps in step 3.

**Step 5:** It is now safe to let the rear panel be supported by the side panels.
FOR YOUR SAFETY - READ BEFORE LIGHTING:

**DANGER**

HOT GLASS WILL CAUSE BURNS.
DO NOT TOUCH GLASS UNTIL COOLED.
NEVER ALLOW CHILDREN TO TOUCH GLASS.

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and must be installed for the protection of children and other at-risk individuals.

**WARNING:** If the information in these instructions is not followed exactly, a fire or explosion may result causing property damage, personal injury or death.

**WARNING/CAUTION:** Hot while in operation. Do not touch. Severe burns may result. Keep children, clothing, furniture, gasoline and other liquids having flammable vapours away.

See installation and operating instructions accompanying this appliance for more information.

A. This appliance is equipped with an ignition system that lights the pilot burner automatically. Do not attempt to light the pilot by hand.

B. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

**What To Do If You Smell Gas:**
- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbour’s phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the Fire Department.
- Use only your hand to operate gas control. Never use tools. If the control does not function, don't try to repair it, call a qualified service technician. Force or attempt to repair may result in a fire or explosion.
- Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system, and any gas control which has been under water.

**LIGHTING INSTRUCTIONS:**

1. **STOP** Read the safety information above on this label.
2. Turn “ON” manual “ON/OFF” switch. (if available)
3. Turn incoming gas shut off valve to the “ON” position
4. Wait 5 minutes to clear out any gas. If you smell gas, **STOP.** Follow “B” in the safety information above on this label. If you don’t smell gas, go to the next step.
5. Turn fireplace “ON” using wall switch or remote control.

**TO TURN OFF GAS TO APPLIANCE:**

1. Turn off fireplace using wall switch or remote control.

**NOTE:**

- **SW1** = Programing Button
- **LED1** = Red Diagnostic Light
- **LED2** = Amber Programing Remote Control Light

Section 10: Cleaning and Maintenance

General

• Have the fireplace and installation inspected yearly. The inspection must include, but is not limited to, the following:
  • A visual check of the entire vent system and termination, where accessible.
  • An inspection of the explosion relief flappers and the door gaskets to ensure a proper seal.
  • An inspection of the burner, vent run, and primary air openings.
  • An inspection of the gas valve, gas components, and pilot flame. For your convenience a 1/8” manifold pressure tap is supplied on the gas valve for a test gauge connection.
  • Inspection of all optional equipment; fans, thermostats, remote control lights, etc.
• For Natural Gas this appliance requires a minimum inlet pressure of 5.5” W.C. and a manifold pressure of 3.5” W.C.
• For Propane Gas this appliance requires a minimum inlet pressure of 11” W.C. and a manifold pressure of 10” W.C.
• Always keep the fireplace area clear and free of combustible materials, as well as gasoline and other flammable vapors and liquids.
• Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.
• Inspection of glass doors and screen for damage and proper installation.

Cleaning

When the fireplace is first activated, there may be some smoke and a visible film may be left on the glass. This is a normal condition, and is the result of burning of protective coatings on new metal.
• Glass must be cleaned periodically to remove any film (which is a normal by-product of combustion) which may be visible. Film can easily be removed by removing the door. Handle the door carefully, and clean it with non-abrasive, non-ammonia based glass cleaners. One of the most effective products is Kel-Kem.
• During the initial firing, Silicone seals will “off gas”, leaving a visual deposit of a white substance on combustion chamber walls. This can easily be removed using normal household products.
• Use a vacuum cleaner or whisk broom to keep the control compartment, burner, and firebox free from dust and lint.

Pilot Burner Adjustment.

1. Locate Pilot Adjustment Screw. (See figure 28)
2. Adjust pilot screw to provide properly sized flame as shown.
3. After installing or servicing, leak test with a soap solution with main burner on. Coat pipe and tubing joints, gasket etc. with soap solution. Bubbles indicate leaks. Tighten any areas where the bubbles appear until the bubbling stops completely.

Frequent Annual Inspection List

1) Inspect and operate the pressure relief mechanism to verify relief mechanisms are free from obstruction to operate.
2) Clean glass window with a suitable fireplace glass cleaner. Abrasive cleaners must not be used. Be careful not to scratch the glass when cleaning.
3) Inspect the operation of the flame safety system Pilot or Flame rectification device.
4) Inspect and ensure the lighting of the main burner occurs within 4 seconds of the main gas valve opening. Visual inspection should match that outlined in the appliance instruction manual. Inspect primary air openings for blockage.
5) Inspect condition of vent and vent terminal for sooting or obstruction and correct if present.
6) Vacuum and clean any debris in the firebox that is not supposed to be there.
7) Test and measure the flame failure response time of the flame safety system. It must de-energize the safety shutoff in no more than 30 seconds.
8) Check all accessible gas-carrying tubes, connections, pipes and other components for leaks.
POD - Pilot on Demand

What is POD and CPI mode?
This fireplace is equipped with an "On Demand" intermittent pilot ignition system (IPI) which also includes a continuous pilot ignition (CPI) mode with an integrated seven day timer.
In IPI mode, the pilot will light before the main burner, when the appliance is turned on using a wall switch, remote or from a thermostat. Once the appliance is turned off, the main burner and pilot flame will shut down.
The continuous (CPI) mode exists to ease the startup phase in colder climates by keeping the firebox and venting warm when the main burner is not in use. The timer automatically switches off the pilot when the appliance has not been used for seven days.
When the CPI function is turned on, the pilot will remain on after the fireplace is turned off. A timer will then begin the countdown for approximately seven (7) days before shutting off the pilot if the appliance is not used. This countdown will reset anytime the burner is use.
If your appliance is equipped with a remote control device capable of selecting IPI / CPI modes, refer to remote operating instructions.
In order to start your pilot, turning the main burner on with the switch, remote or thermostat and then turning it off will reactivate the continuous pilot mode and reset the seven day timer.
A jumper is supplied with this unit that can be plugged into the wire harness connected to the controller. This jumper cable gives the Remote Control the ability to operate the POD / IPI switch and set the unit to operate in either condition. Please refer to jumper installation instructions for more information.

Remote Continuous Pilot (CPI)
Selection

Requires installation of the CPI JUMPER
With the system in “off” position press the Mode Key, to index to the CPI mode icon, Pressing the Up Arrow Key will activate the Continuous Pilot Ignition mode (CPI). Pressing the Down Arrow Key will return to IPI. A single "beep" will confirm the reception of the command.

Installing the CPI Jumper Cable
1). Access the control box.

![Figure 19.a Open the control box drawer](image)

2). Remove the bag containing the Jumper cable from the wire harness connected to the controller.

![Figure 19.b Locate Jumper cable](image)

3). Find the corresponding plug attached to the control wire harness and connect the CPI jumper.

![Figure 19.c Connect CPI](image)

4). See operation section to turn remote into CPI mode.
Indoor fireplace in protected outdoor applications

This fireplace may be installed into outdoor locations provided they are suitably protected from direct water impingement. However, all installation clearances in the appliance manual must be observed. Framing, Clearances to Combustibles, Mantel Heights, Facing Requirements, Venting Installation, etc. Use supplied Safety Screen.

</table>

Example formula

Min. overhang = A x 0.75
For example: if distance A is 84", the overhang must extend at least 63"

Notes

• Overhang requirements must be applied to both the front and sides of the fireplace
• Indoor see-through models cannot be installed as indoor/outdoor fireplaces, as air flows through both sides of the fireplace.
• If the fireplace will be in contact with salt water, then an outdoor fireplace is recommended
• Follow all building codes, including those addressing fireplace penetration of an exterior building envelope

NOTICE

Units with tempered glass doors are vulnerable to rapid and/or extreme changes in temperature (thermal shock). Take care to prevent water from contacting the fireplace, especially if it is hot.

Note 3: For J, K, and as specified in CGA B149 installation code. Local codes or regulations may vary.
* Based on CGA B149.1 Natural Gas and Propane installation code. Local codes may vary, please check with local regulatory agency.
** Based on ANSI Z223.1/NFPA 54 National Fuel Gas Code. Local codes may vary, please check with local regulatory agency.
Appendix B: Warranty

MONTIGO RESIDENTIAL WARRANTY PROGRAM

Canadian Heating Products Inc. and/or Montigo DelRay Corp (collectively referred to herein as "The Companies"), warrants the Montigo gas appliance (referred to herein as ‘the appliance’) to be free from defects in materials and workmanship at the time of manufacture. The gas appliance and related components are further subject to the terms and conditions set forth below.

This warranty covers the following Montigo product series:
Distinction, Divine & Divine Outdoor (H-Series), Illume (FID Inserts), Phenom (L/P/PL-Series), Exemplar (R/RP-Series), Mahana and DelRay

QUALIFICATIONS TO THE WARRANTY

To receive the benefits of this warranty, the appliance must be subjected to normal use. The appliance must be purchased, installed and serviced annually by a dealer authorized by The Companies for the warranty to be valid.

This warranty covers the following Montigo product series:
Distinction, Divine & Divine Outdoor (H-Series), Illume (FID Inserts), Phenom (L/P/PL-Series), Exemplar (R/RP-Series), Mahana and DelRay

Appendix B: Warranty

MONTIGO RESIDENTIAL WARRANTY PROGRAM

Canadian Heating Products Inc. and/or Montigo DelRay Corp (collectively referred to herein as “The Companies”), warrants the Montigo gas appliance (referred to herein as ‘the appliance’) to be free from defects in materials and workmanship at the time of manufacture. The gas appliance and related components are further subject to the terms and conditions set forth below.

This warranty covers the following Montigo product series:
Distinction, Divine & Divine Outdoor (H-Series), Illume (FID Inserts), Phenom (L/P/PL-Series), Exemplar (R/RP-Series), Mahana and DelRay

QUALIFICATIONS TO THE WARRANTY

To receive the benefits of this warranty, the appliance must be purchased, installed and serviced annually by a dealer authorized by The Companies for the warranty to be valid.

The gas appliance must be installed by a licensed professional in accordance with The Companies’ installation instructions and local building codes. The warranty on the appliance covers only components manufactured by The Companies. The use of components manufactured or supplied by other manufacturers and used in conjunction with the appliance could create serious safety hazards, may result in the denial of certification by recognized national safety agencies and could violate local building codes. Such use may untimely void this warranty. This warranty does not cover any damages occurring from the use of any components not manufactured or supplied by The Companies.

The appliance must be subjected to normal use. The appliance is designed to burn natural gas (NG) or liquefied petroleum (LP) only. Burning conventional fireplace fuels such as wood, coal or any other solid fuel will cause damage to the appliance, produce excessive temperatures will result in a fire hazard and void all warranties. This warranty is transferable. The appliance must remain in its original place of installation to be valid.

If the components of the appliance covered by this warranty are found to be defective within the time frame stated (see The Companies investigation of claims), The Companies will, at its option, replace or repair defective components of the appliance manufactured by The Companies at no charge and will also pay for labor costs (in accordance with schedule) incurred in replacing or repairing components. If repair or replacement is not commercially practical, The Companies will, at its sole discretion, fully discharge all obligations under the warranty by refunding the verified dealer purchase price of the appliance, excluding the cost of labor unless the labor is covered by the terms of the warranty.

This warranty covers only parts and labor as provided above. In no case shall the companies be responsible for materials, components or construction, which are not manufactured or supplied by The Companies, or for the labor necessary to install, repair or remove such materials, components or construction. All replacement or repair components will be shipped F.O.B. from the nearest Company factory.

LIMITATION ON LIABILITY

It is agreed and understood that The Companies sole obligation, and purchaser’s exclusive remedy under this warranty, under any other warranty, expressed or implied, or in contract, tort or otherwise, shall be limited to repair, replacement or refund as specified above. The opinion of The Companies with respect to these matters shall be final.

In no event shall The Companies be responsible for any incidental or consequential damages caused by (but not limited to) improper installation, installation by an unqualified or unauthorized installer, accident, lack of regular maintenance, user error, abuse, misuse, Acts of God, power surges, floods, natural disasters, force majeure, defects in its appliance whether such damage occurs or is discovered before or after replacement or repair, and whether or not such damage is caused by The Companies negligence. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you. The duration of any implied warranty with respect to the appliance is limited to the duration of the foregoing warranty. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so the above limitation or exclusion may not apply to you.

* Exterior painted surfaces exempt

QUALIFICATIONS TO THE WARRANTY

This Warranty only covers gas appliances installed in the United States or Canada.

To receive the benefits of this warranty, the appliance must be purchased, installed and serviced annually by a dealer authorized by The Companies for the warranty to be valid.

The gas appliance must be installed by a licensed professional in accordance with The Companies’ installation instructions and local building codes. The warranty on the appliance covers only components manufactured by The Companies. The use of components manufactured or supplied by other manufacturers and used in conjunction with the appliance could create serious safety hazards, may result in the denial of certification by recognized national safety agencies and could violate local building codes. Such use may untimely void this warranty. This warranty does not cover any damages occurring from the use of any components not manufactured or supplied by The Companies.

The appliance must be subjected to normal use. The appliance is designed to burn natural gas (NG) or liquefied petroleum (LP) only. Burning conventional fireplace fuels such as wood, coal or any other solid fuel will cause damage to the appliance, produce excessive temperatures will result in a fire hazard and void all warranties. This warranty is transferable. The appliance must remain in its original place of installation to be valid.

If the components of the appliance covered by this warranty are found to be defective within the time frame stated (see The Companies investigation of claims), The Companies will, at its option, replace or repair defective components of the appliance manufactured by The Companies at no charge and will also pay for labor costs (in accordance with schedule) incurred in replacing or repairing components. If repair or replacement is not commercially practical, The Companies will, at its sole discretion, fully discharge all obligations under the warranty by refunding the verified dealer purchase price of the appliance, excluding the cost of labor unless the labor is covered by the terms of the warranty.

This warranty covers only parts and labor as provided above. In no case shall the companies be responsible for materials, components or construction, which are not manufactured or supplied by The Companies, or for the labor necessary to install, repair or remove such materials, components or construction. All replacement or repair components will be shipped F.O.B. from the nearest Company factory.

LIMITATION ON LIABILITY

It is agreed and understood that The Companies sole obligation, and purchaser’s exclusive remedy under this warranty, under any other warranty, expressed or implied, or in contract, tort or otherwise, shall be limited to repair, replacement or refund as specified above. The opinion of The Companies with respect to these matters shall be final.

In no event shall The Companies be responsible for any incidental or consequential damages caused by (but not limited to) improper installation, installation by an unqualified or unauthorized installer, accident, lack of regular maintenance, user error, abuse, misuse, Acts of God, power surges, floods, natural disasters, force majeure, defects in its appliance whether such damage occurs or is discovered before or after replacement or repair, and whether or not such damage is caused by The Companies negligence. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you. The duration of any implied warranty with respect to the appliance is limited to the duration of the foregoing warranty. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so the above limitation or exclusion may not apply to you.
Appendix B: Warranty Continued

**EXCLUSIONS TO WARRANTY**

Corrosion or rust of any kind due to a lack of maintenance, inadequate combustion air or improper venting and corrosive chemicals/environments, expansion and contraction of metals or minor movements of components causing noise are not covered by this warranty.

Willful misconduct (i.e. use of the appliance with problems known to the purchaser and causing further damages), including unauthorized or self-performed 'fixing' or exploration of the appliance's internal workings will void the warranty.

Appliances on which the serial number has been altered, defaced, removed or made illegible will void the warranty.

Costs incurred for diagnosis, service work, shipping and handling of defective or replacement parts are not covered under this warranty.

The published warranties are not applicable for any equipment manufactured by The Companies that has been sold direct to the consumer via internet or auction websites. The Companies do not endorse, approve or certify any online sale of its products through auction websites, online retailers or any other method of online sales direct to consumers.

**INVESTIGATION OF CLAIMS AGAINST WARRANTY**

The Companies reserve the right to investigate any and all claims against this warranty and decide upon method of settlement.

The Companies are not responsible for work done without written consent of The Companies.

The Companies shall in no event be responsible for any warranty work done without first obtaining the Companies written consent.

The Companies employees and dealers have no authority to make any warranties to neither alter this warranty nor authorize any remedies in addition to or inconsistent with those stated within this warranty.

**IF WARRANTY SERVICE IS NEEDED**

To make a claim under this warranty, contact your installing dealer or contractor. The installing dealer is responsible for providing service and will contact the companies to initiate warranted parts replacements. In the event the installing dealer is unavailable, contact your nearest authorized Montigo dealer (www.Montigo.com) or contact Montigo direct at techsupport@montigo.com. Ensure you have your sales receipt and the model and serial number of your appliance.

**DO NOT ATTEMPT TO DO ANY SERVICE WORK YOURSELF**

If you cannot locate the installing dealer, or nearest dealer/distributor, you must notify The Companies in writing.

**USA Offices**

6955 Salashan Parkway
Ferndale WA, 98248
techsupport@montigo.com

**Canadian Offices**

27342 Gloucester Way
Langley, BC V4W 4A1
techsupport@montigo.com

The terms and conditions of this warranty may be altered or amended from time to time without prior notice.

**WARRANTY PERIOD:** Warranty coverage begins on the date of original purchase. In the case of new construction, warranty coverage begins on the date of first occupancy of the dwelling or six months after the sale of the product by an independent, authorized Company dealer/distributor, whichever occurs earlier.
Appendix C: Amendment

(Gas Fireplace / Equipment sold in the State of Massachusetts)

5.08: Modifications to NFPA-54, Chapter 10

(1) Revise NFPA-54 section 10.5.4.2 by adding a second exception as follows:

Existing chimneys shall be permitted to have their use continued when a gas conversion burner is installed, and shall be equipped with a manually reset device that will automatically shut off the gas to the burner in the event of a sustained back-draft.

(2) Revise 10.8.3 by adding the following additional requirements:

(a) For all side wall horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than seven (7) feet above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

1. INSTALLATION OF CARBON MONOXIDE DETECTORS. At the time of installation of the side wall horizontal vented gas fueled equipment, the installing plumber or gas fitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gas fitter shall observe that a battery operated or hard wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors
   a. In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or an attic, the hard wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level.
   b. In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

2. APPROVED CARBON MONOXIDE DETECTORS. Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2042 listed and IAS certified.

3. SIGNAGE. A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2) inch in size, “GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS”.

4. INSPECTION. The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.08(2)(a)1 through 4.

(b) EXEMPTIONS: The following equipment is exempt from 248 CMR 5.08(2)(a)1 through 4:

1. The equipment listed in Chapter 10 entitled “Equipment Not Required To Be Vented” in the most current edition of NFPA 54 as adopted by the Board; and

2. Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

(c) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM PROVIDED. When the manufacturer of Product Approved side wall horizontally vented gas equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:

1. Detailed instructions for the installation of the venting system design or the venting system components; and

2. A complete parts list for the venting system design or venting system.

(d) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM NOT PROVIDED. When the manufacturer of a Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for venting the flue gases, but identifies “special venting systems”, the following requirements shall be satisfied by the manufacturer:

1. The referenced “special venting system” instructions shall be included with the appliance or equipment installation instructions; and

2. The “special venting systems” shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

(e) A copy of all installation instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.

(3) After NFPA-54 section 10.10.4.2 add a new section 10.10.4.3 as follows:

When more than four gas appliances are to be vented through a common gas vent or common horizontal vent manifold, a plan of the proposed vent installation shall be submitted to the Inspector and the serving gas supplier for review and approval.
