Unparalleled Expertise

Montigo is North America's premier producer of standard and custom engineered handcrafted gas fireplaces for commercial and residential projects.

Unique to each installation, our fireplaces are the heart of a warm and inviting atmosphere. They are featured in luxury homes, hotels, casinos, restaurants, universities, sports stadiums and other public settings.

We offer a wide range of striking, standard residential models – each engineered and built to our exacting standards.

We also work closely with designers and architects to engineer, handcraft and install awe-inspiring, bespoke fireplaces for one-of-a-kind spaces.

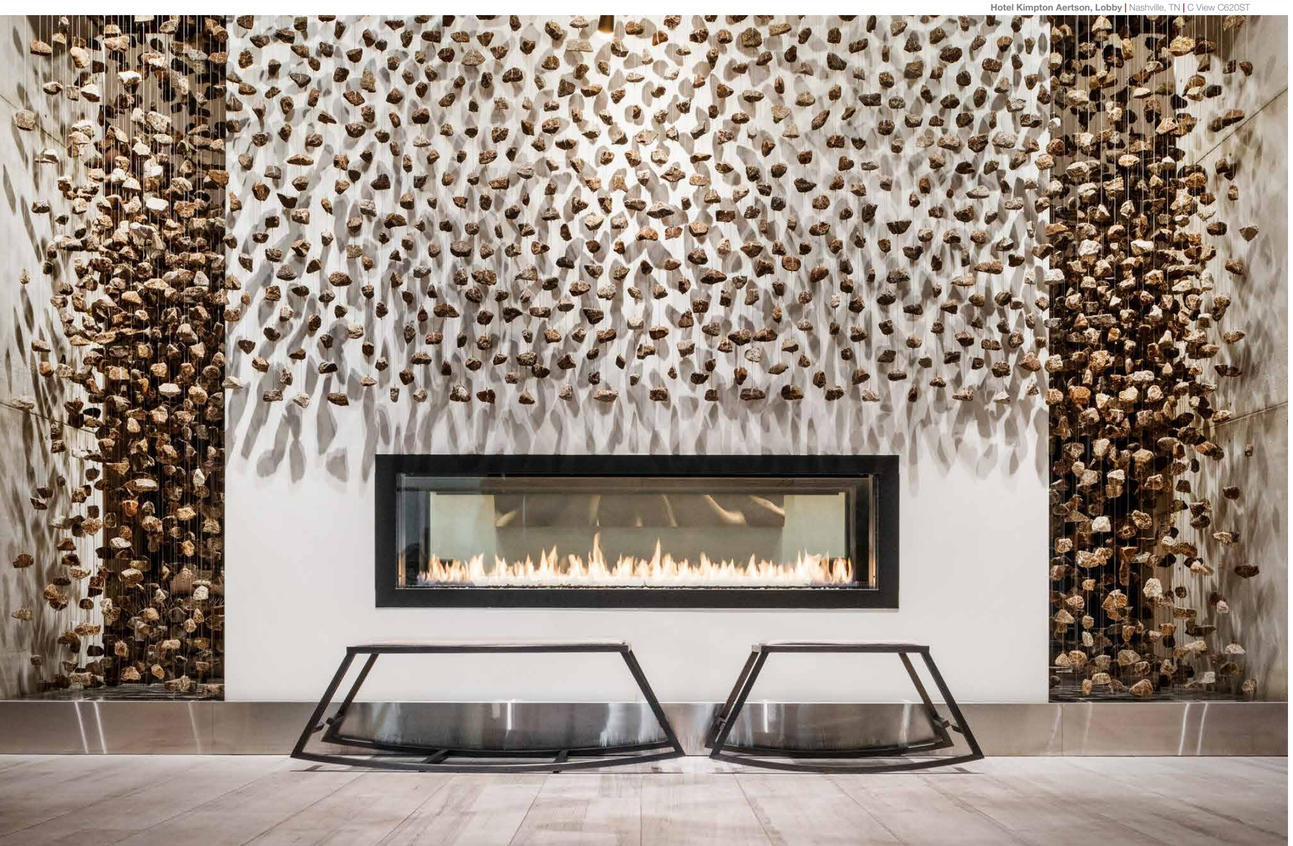
We collaborate with you to help create a sense of space with our fireplaces.

If you can dream it,
we can build it.

Inspired by architects, guided by builders, manufactured to perfection.

From concept to completion — No project is too complex.

Hotel Kimpton Aertson, Lobby | Nashville, TN | C View C620ST



Decades of Experience

With many decades of manufacturing excellence, collaborative relationships with architects, designers, builders and other professionals, and an instinctive drive to lead the fireplace revolution, Montigo delivers the perfect fireplace to suit your distinct style.

Designing a commercial space?

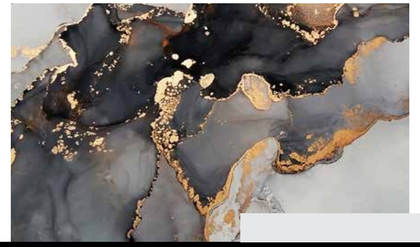
Custom design, custom made, unique to each installation. From hotels to restaurants, and other public spaces, a fire feature is the heart of every warm and inviting space. Special requirements, unforeseen challenges, 24/7 commercial use – no project is too complex.

Designing a residential space?

Working with you and your clients, Montigo's team will assist you in finding a fireplace perfectly suited to the space while taking into account the desire for low impact screen visibility, integration to home automation systems, flush terminations and more.

Designing multi-family dwellings?

Only Montigo has more than four decades of experience in assisting design professionals to create the focal point of shared spaces with our spectacular custom units AND provide warmth and ambiance to each suite with our vast offering of residential units.



Montigo
– The Mark of Quality

All of us at Montigo take pride in knowing that no other manufacturer can boast of the dramatic impact on fireplace design trends that we have had over the decades. Many of the innovations taken for granted today are the result of our highly skilled, creative engineering team and craftspeople.

Whether we are inventing the first zero-clearance gas fireplace (1976) or pioneering cool-touch glass technology (2002), perfection in form and function is the driving force behind the work we do at Montigo.

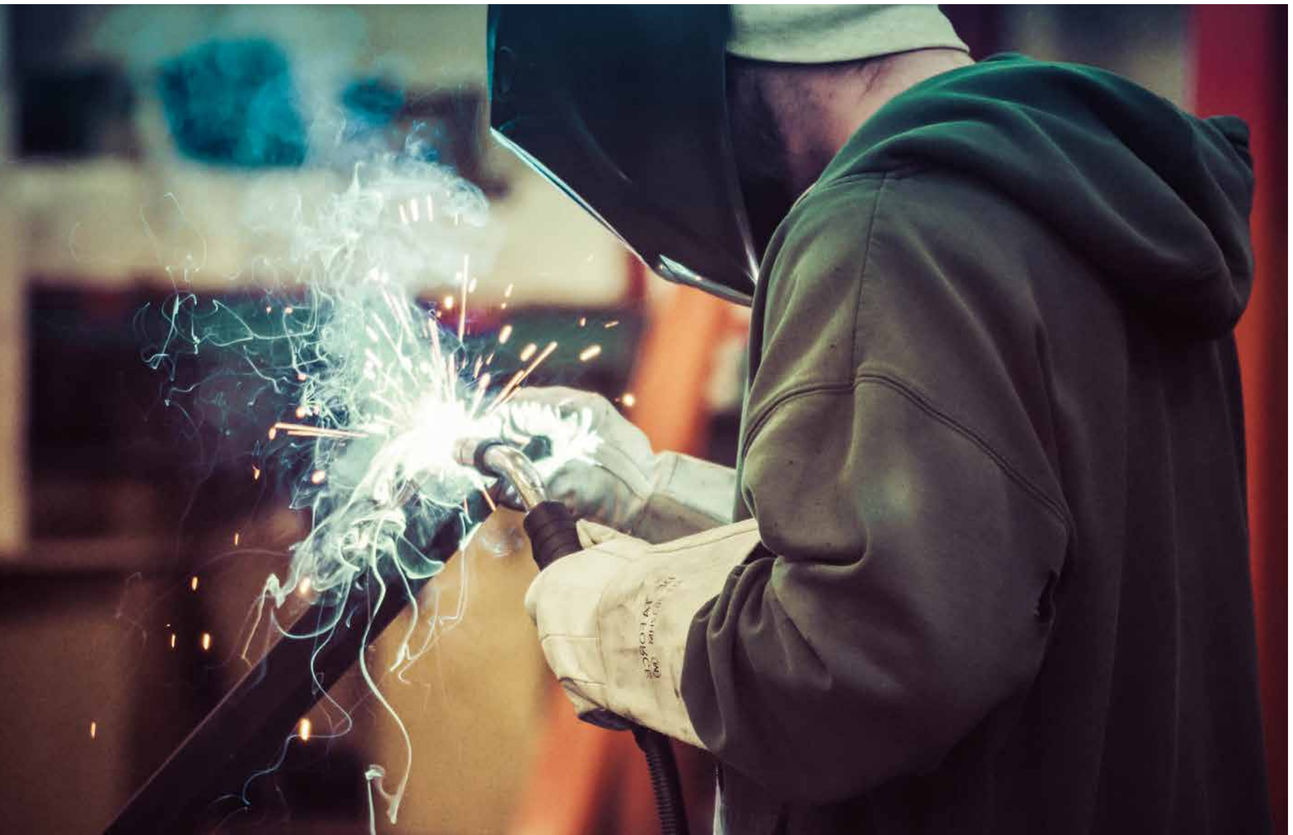
When it comes to choosing a fireplace, there are a number of factors to consider:

- Quality
- Experience
- Technology
- Ease of Installation
- Customization

Handcrafted with care

The exclusive Gold Standard product in the commercial market.

Quality materials.
Quality construction.
Quality performance.



Bespoke

Handcrafted with care and using only the best raw materials, Montigo fireplaces are not only beautiful, they are built to last.

100% US STEEL

All of the steel used to produce our commercial fireplaces is milled in the United States. Montigo believes in the importance of sustainability and environmental responsibility, so the steel we use contains a minimum of 85% recycled content.

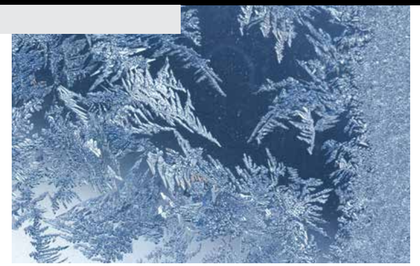
Using high quality steel also means a beautiful, durable, heat and corrosion resistant finished product with a longer service-life.

MANUFACTURING PRACTICES

All of Montigo's manufacturing processes have been perfected to ensure consistent operation, efficiency and flame.

A unique combination of leading edge design and engineering so every Montigo fireplace is an impressive model of function and form.

Our standard residential fireplaces are manufactured in the US and Canadian plants, custom engineered commercial fireplaces are produced in Canada. This ensures efficient delivery of product throughout North America.



Technology

Montigo leads the industry in the development of new technologies to improve safety, enhance and work with the latest design styles, and increase performance.

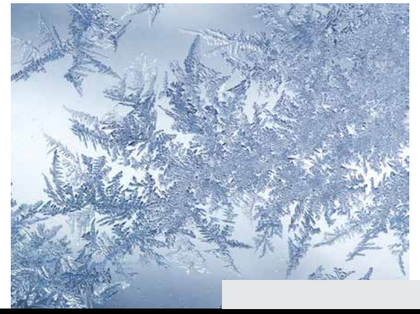
Over the past 40 years, many of the inner components of each Montigo fireplace have been engineered and re-engineered, resulting in the most efficient operation and the nicest looking flame on the market.

COOL-PACK SYSTEM

Montigo's patented award winning COOL-Pack and Power COOL-Pack systems for cool-touch glass have transformed commercial fireplaces by making them more accessible and safe.

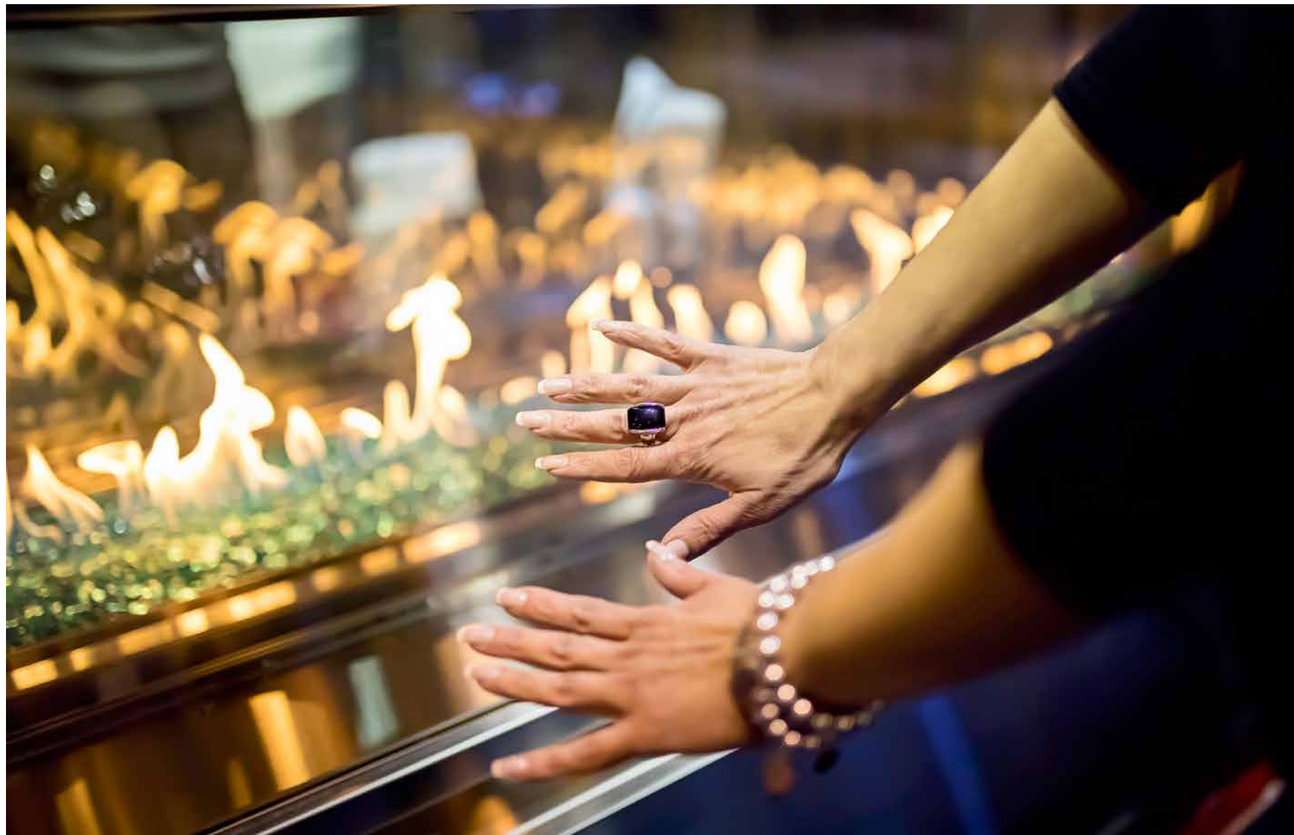
Our COOL-Pack systems are installed in all commercial fireplaces, located between the interior and the exterior glass, keeping the exterior glass cool-to-touch.

This advanced technology reduces potential liability issues in commercial applications such as restaurants, hotel lobbies, casinos and spas.

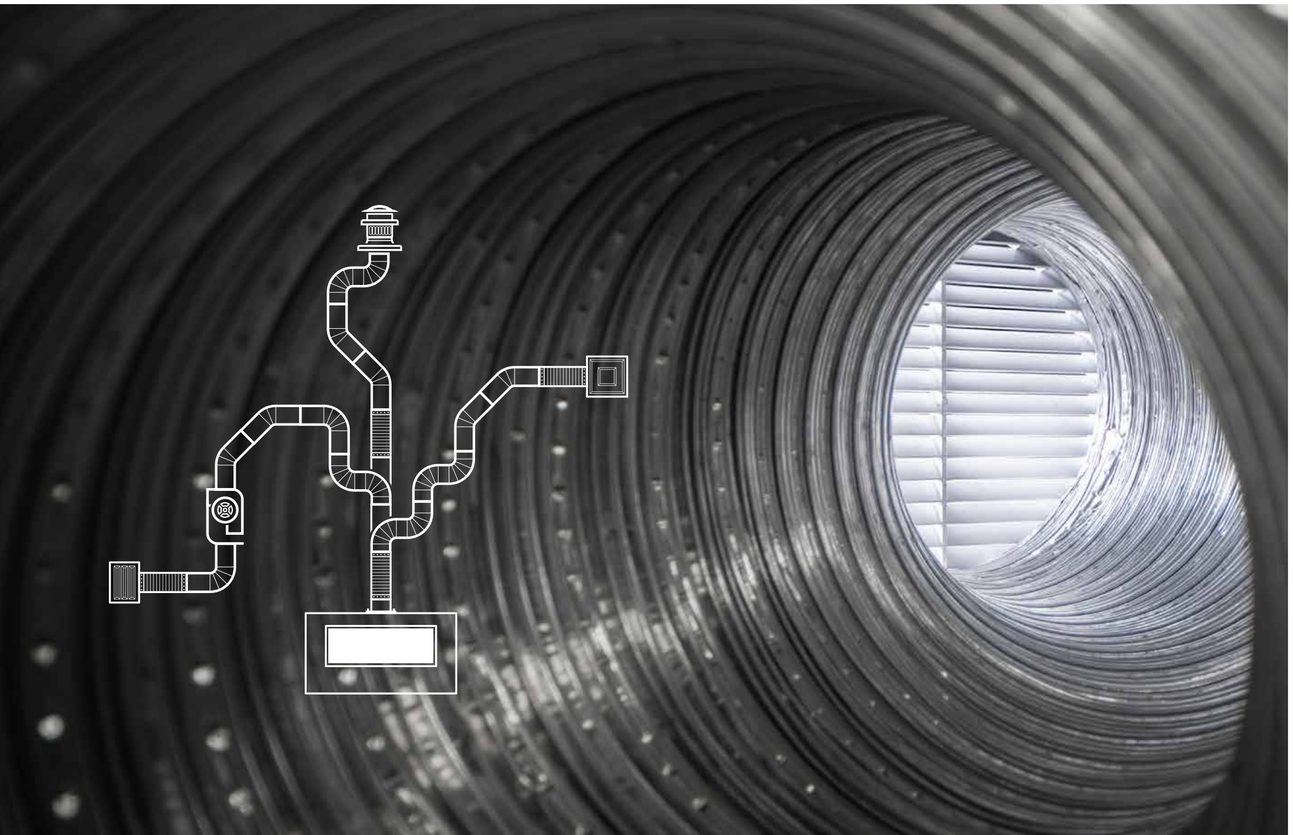


Cool-to-touch glass

Beauty, creativity, and safety — operating in unison.



If you can dream it,
we can build it.



Custom Venting

Montigo develops all custom units from an installation friendly perspective. Multiple intake, venting and termination options mean that the fireplace will not dictate your design, but adapt to it.

UNLIMITED VENTING POSSIBILITIES

With our proprietary power venting system and team of expert engineers, we've eliminated the need to locate your fireplace near an exterior wall or have a vertical chimney.

Our power venting system allows for unlimited vent lengths, turns, and even downwards slopes without affecting the safety or aesthetic of the fireplace. Venting between the fireplace and termination can be run up to 500 feet.

This allows architects, designers, and homeowners to dream big, knowing they have the ability to feature fire in just about any location. Montigo power vents are engineered and manufactured in-house to ensure an optimized fireplace system is created.

Custom Termination

TERMINATION SYSTEMS

Montigo designs and manufactures an extensive line of termination systems, including custom terminations for large scale projects; always with aesthetics and function in mind.

If you are designing a multi-unit building, you'll welcome our expertise in termination systems and our latest innovation – the Louver Termination System. This system mounts flush with the side of the building so there is no visible exterior venting!

In addition to our invisible louvered termination system for multi-unit custom commercial applications, Montigo is the only manufacturer with termination systems that have passed the rain and wind test – a vitally important consideration in wet coastal regions, such as the Pacific Northwest.

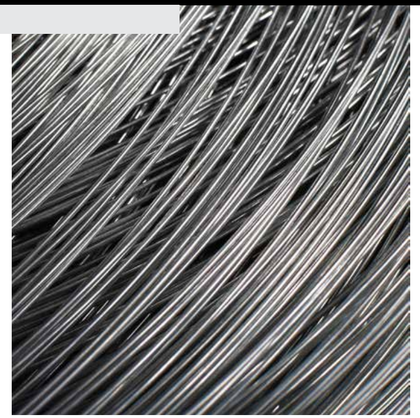
Limited only by your imagination.

A team of professionals
is standing behind each
and every fireplace.

Ease of Installation

All Montigo fireplaces are installed by a certified dealer in your area. Our experienced team of engineers and installation specialists work with dealers to ensure each fireplace is installed efficiently according to our high standards.

We work with architects, designers and dealers throughout North America and around the world to bring warmth and beauty to any commercial and residential space.



On-Site Lab

Every manufactured Montigo fireplace is tested in our on-site lab and certified to meet stringent CSA guidelines, ensuring optimum quality, performance, and safety.

Every custom engineered fireplace is built to meet current ANSI Standards with CSA International US and Canada, so documentation for building codes and public safety requirements are easily acquired when necessary.

Unlike independent custom fireplace manufacturers, our fireplaces are built using CSA certified components and manufacturing processes.

Certified Tested and

Exacting standards ensure peace of mind — every time.

GAYLORD ROCKIES RESORT

Gaylord Rockies Resort, Great Room | Aurora, CO | BF Series BF156

Rustic Alpine Charm

Visitors to the world class Gaylord Rockies Resort and Convention Center, just 10 minutes from the Denver International Airport in Colorado, are transported to a mountain-themed playground. The colossal structure encompasses 1.9 million sq-ft of high-end hotel, restaurant and convention space. Designed and constructed with a ski village vibe on an 85-acre site, the property boasts 1,501 rooms, five sit-down restaurants and an indoor and outdoor recreational park.

ARCHER HOTEL

Archer Hotel, Lobby | Austin, TX | BF Series BF52ST

Experience Texas Chic

The Archer Hotel is located in the heart of The Domain. The Domain features 100 upscale and mainstream retail stores and restaurants, almost half of which are exclusive within the market. The hotel itself has 33,177 sqft of retail space. The hotel features a chef-driven restaurant, full bar, and a variety of indoor and outdoor dining experiences. A signature element of the hotel is a two-story lobby with a stone spiral staircase, centered around a crystal chandelier, leading up to a pre-function space overlooking the lobby and restaurant.

PRODIGY SERIES

Light *commercial*

Alexan Lower Greenville Apartments, Clubroom | Dallas, TX | Prodigy PCST820

Prodigy Series

flexible and commercial grade for light-duty applications.

The Prodigy's clean contemporary lines and frameless double glass design deliver breathtaking aesthetics. Finishing materials can be attached directly to the fireplace and brought down to the edge of the glass creating a stunning focal point without interruption.

features

- Multiple glass widths and heights to meet your project needs
- COOL-Pack technology for cool-touch safety
- Glass temperatures as low as 125°F
- TV and artwork friendly, flexible finishing of wall due to low temperatures
- Multi-color LED uplighting
- Up to 15,000 BTU/HR per linear foot
- Concealed ribbon or high-low burner style
- Natural gas or propane
- Black satin painted galvannealed steel contruction
- Customizable media options
- Electronic ignition — no standing pilot
- Compatible with home automation systems
- Combustion air or flue gas vent runs up to 80' with 7 elbows, or linear equivalent
